Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 4 of 108 PageID #: 113690

	3319		3301
1	THE COURT: You can be seated.	1	Technical University in Aachen and finished it in 1983,
2	Ready to start? Bring the jury in.	2	in the shortest time. Their Technical University is
3		3	one of the most famous centers in Germany, and one of
4	(The jury enters the courtroom.)	4	the main topics of it is engineering. And it is one of
5		5	the biggest institutes, for example, for textile
6	THE COURT: You can be seated.	6	engineering as well, which later on was a big advantage
7	Your next witness, Mr. Slater.	7	for me.
8	MR. ANDERSON: Yes, Your Honor. Plaintiffs	8	So after passing medical school, I went
9	call Dr. Uwe Klinge.	9	to or I started residency at the surgical department
10		10	at the University Hospital in Aachen. This hospital is
11	PROF. DR. UWE KLINGE, after having been duly	11	one of the biggest buildings in size in Europe. And it
12	sworn, was examined and testified as follows:	12	is a major hospital in this area, attracting a lot of
13		13	patients from Belgium and the Netherlands as well. I
14	THE CLERK: Would you state your full name,	14	started residency there and learned the basic
15	spell your last name for the record.	15	principles of surgery, passed several hundreds of
16	THE WITNESS: My name is Klinge, Uwe.	16	operations. And after having done all this, usually
17	THE COURT: You can be seated.	17	or you pass or I passed an examine, at some official
18		18	office there. And afterwards, I got I became a
19	VOIR DIRE - DIRECT EXAMINATION	19	specialist for general surgery. That was in 1993.
20		20	Afterwards, I became oberartz, that is a
21	BY MR. ANDERSON:	21	function that is quite similar to being an attendant
22	Q Good morning, Dr. Klinge.	22	surgeon on call. That means that you're fully
23	A Good morning.	23	responsible for what your residents are doing there and
24	Q Can you please tell the jury where you	24	you're responsible for a certain number of patients.
25	live?	25	Q Dr. Klinge, if I could just stop you there.
	3380		3382
1	A I'm living in Montzen. That is a small village	1	You said that Aachen University was a
2	at the eastern part of Belgium. And this is about 10	2	leading textile and surgical implant facility.
3	miles away from Aachen. This area is very close to the	3	Where does Aachen University rank in terms
4	Netherlands, Germany, Belgium, where all these	4	of surgical mesh research facilities in the entire
5	countries are coming together, and I'm living in this	5	world?

6 place. And did you come here from Belgium to 7

testify in front of this jury here today? 8

9 That is correct.

10 Q Dr. Klinge, please tell the jury your 11 profession?

12 Α With the help of my CV, I started medical school

13 in --

14

15

16

Q First of all -- I'm sorry.

First of all, tell them your profession.

Are you an abdomen surgeon?

17 I'm an abdominal surgeon and a biomaterial

researcher, including histology, pathology, with the 18

19 focus of meshes in soft tissue -- in soft tissues,

20 veah.

21 Q Before we get into the issues in this case

22 involving Prolift, tell the jury a little bit about

your background and your training and your education, 23

24 please.

Okay. I started medical school in 1977 at the

8

6 Α In the moment, because of our work, the -- we are

7 at the top of this -- in this field.

And who is the top surgical mesh

biomaterial science researcher at this top facility in

10 the world?

11 I would have to say me.

12 You talked about becoming a specialist for 13 general surgery in 1993, and then you went up to 1999

14 in terms of getting your oberartz, which allowed you to

be an attending. 15

16 My question is, during this time as you

17 became a surgeon, did you begin to perform hernia

18 surgeries?

19 Yes. Indeed, it is a necessary part for becoming

20 a specialist of general surgery to perform about 100 of

21 hernia operations there. And, therefore, I had to do a

lot of hernia surgeries in the time period after 22

23 becoming a specialist. And after becoming a specialist

24 in the beginning of the '90s, there are an increasing

25 number of operations used meshes. So, therefore, in this time period of the beginning of the '90s, we
 increasingly get aware of meshes to be used as
 reinforcement of the tissues.

Q In the abdominal wall?

5 A In the abdominal wall.

4

Q Okay. Sorry for interrupting you. Let'sgo back to, I think you were up to 2000?

8 A So this was the career as a surgeon. And in9 parallel, there is an academic career in Germany. And

10 it started to make a first scientific work, usually you

11 start during the medical school. And this was done by

12 me in the department for biochemistry where I had a --

13 had to look at the red blood cells, whether they are

14 able to attract oxygen and to deliver this in the

15 tissue. So I made some -- about for three years, I

16 worked in this department and made a thesis so that

17 afterwards, I was allowed to take the title of doctor.

So this was the first step there. Thenlater in 1993, and I'm sure we will talk about later on

20 about it, 1993 we start to work scientifically on this

21 meshes, not least because of our experience with

22 this -- with our patients. And then I started to work

23 scientifically, and for the next seven years, and all

24 this together allowed me to apply for the venia

25 legendi. Venia legendi does mean that if you get this

permission, then you're allowed to represent surgery in

3384

2 lectures for the students and all over the hospital.

3 So I got this permission in 2000. To get

4 this, you have to collect all your scientific work.

5 You have to collect or to list all the publications.

6 And then it's going to an internal board and to an

7 external revision or reviewer. And then if they accept

8 and said, okay, it's qualified enough, then you get

9 this venia legendi and then you get the new title as

10 privatdozent.

1

11

Q What does that mean?

12 A It sounds a little bit strange. I think, or I

13 know that it's only available in Austria and in Germany

14 till now, but we are used to it for 100 years. So it

15 definitely means that you have shown that you're able

16 to do some science successfully and that you're able to

17 work as a professor. But it is not sufficient to be a

18 professor. But if you get this title of privatdozent,

19 then you have to still work on for the next five, six

20 years. You have to collect your research project. You

21 have to collect all this literature. You publish

22 there. And after these five, six years, you can apply

23 again, and then again an internal board, an external

24 board. And then if they accept this, then you get the

25 title of a professor.

1 So this is the end of the academic career

2 in Germany. And it took -- it was the end of a long --

3 of a long trip of 28 years for me. So it was almost

4 exactly after 28 years after I started to study in

5 Aachen, then I got the title finally of the professor.

6 And this was in -- so I have to look. It was in 2005.

7 Yeah, in 2005.

8 Q In terms of the specific work that you

9 performed and the research and the publications that

10 you were talking about, between 1993 and 2000, in order

11 to -- I know I'm going to mispronounce it, but the

12 venia legendi, in order to achieve that level, was that

13 research that you did during those seven years

14 specifically with regard to tissue response,

15 biomaterial science and surgical meshes for the human

16 body?

17 A That is correct. And it started with our

18 experience of hernia meshes or meshes in the abdominal

19 wall, where we got aware that some of these patients

20 have serious complications. They have a lot of wound

21 liquid around these devices. Some of them have pain,

22 some of them have infection, some of them has fistula

23 formation to the bowels. So we have serious problems

24 in some of these patients, and we got a little bit

25 concerned. And we wanted to know what is the reason

3386

1 for this.

2

If you made a revision operation of these

3 patients and you are looking to these devices, during

4 implantation, they are looking quite nice, very flat,

5 very smooth, and you have a good feeling that it's now

6 a very strong repair. But if you are looking after

7 three months, after six months, they are completely --

8 it's a stiff plate, they are integrated only in scar

9 tissue and curled up and wrinkled. And we wanted to

10 understand what is the reason for this change from the

11 textile to this -- what we have seen in the OR. And

12 there are hundreds of images showing what happens to

13 these textile products after placing in the soft

14 tissue.

17

15 THE COURT: Counsel, we want to -- do you

16 want to offer the witness as an expert?

MR. ANDERSON: I had a little bit more, but

18 I'm happy to.

THE COURT: Well, it seemed to me he wasqoing into the substance of his testimony as opposed to

21 just qualifications at this point. So can we just

22 stick to qualifications and then --

MR. ANDERSON: Certainly.

24 BY MR. ANDERSON:

25 Q So you were talking about the work that was

14

1

- necessary for you to achieve this habilitacion andvenia legendi from 1993 to 2000.
- **3** Okay. We'll get back to some of that work.
- 4 Okay?
- **5** A Yes.
- **6** Q We will come back.
- **7** A Yeah, yeah, yeah.
- 8 Q So in 2000, what did you do? Let me ask
- **9** you this before we do that.
- In addition to biomaterial science, tissueresponse for surgical meshes during this 1993 to 2000
- 12 time period where you did all of this research in order
- 13 to obtain the venia legendi, did that also involve
- **14** histopathological review of this tissue response?
- ${f 15}$ A Yes, exactly. It is an integrative part of these
- **16** investigations, to look at the soft tissues.
- 17 Q Please explain to the jury what
- 18 histopathology is as it relates to our bodies -- our
- 19 body's tissue response to surgical meshes like Prolift?
- **20** A So histology, histology is that you want to
- 21 analyze what happens to the tissues. And usually you
- 22 need a microscope to see this. Usually surgeons only
- 23 at the microscopical level and they saw what they can
- 24 feel and what they have in their hands. So to
- 25 understand this a little bit better, you need to use a

 - microscope and to look a little bit more deeper to the details. And that is histology. That is the science
- **3** of the tissues.

1

2

- **4** If there are some diseases or if there is
- 5 some injury and damage, then you have a pathology. And
- 6 you can learn from the pathology what is the disease in
- 7 the background, what is the reason for the injury.
- 8 And, therefore, it is necessary to look to the
- 9 histology and pathology to understand what happens in
- 10 the OR with these materials. It was an essential part
- **11** of this study.
- 12 Q And just in its most simplest form, during
- 13 these years from '93 to 2000, in all of this research
- 14 that you were doing, were you looking at the body's
- 15 response to polypropylene meshes in human tissue after
- **16** being implanted with surgical meshes like Prolift?
- **17** A That's correct. That is a part of it.
- 18 Q Okay. And then I see from your CV in 2000
- **19** you became the principal investigator of the surgical
- 20 department at Aachen University.
- 21 Just briefly explain that to the jury, if
- 22 you would?
- 23 A The other research projects dealing with the
- 24 meshes, and I'm the leader of all these projects, they
- 25 have an amount of money and work there that it has to

- 1 be coordinated a little bit better. And we build up or
- we increase the resources in our lab. And I was put in
- 3 charge to organize all this and to be responsible for
- 4 this work.
- 5 I just would like to point out, maybe in
- 6 the next time I sometimes mixed up I and we, I was told
- 7 that it is -- may be a little bit different here.
 - In science, it is only fair to say "we,"
- **9** because the work is done by a team, and so, therefore,
- 10 I very often will say "we." But, in fact, I'm
- 11 responsible for everything there, so if you want to
- 12 charge me, it is an I. So maybe -- yeah. So that you
- 13 have it correct, even if I say "we," it's...
 - Q Fair enough. Thank you.
- And then in 2002 you became the specialist
- **16** for surgical intensive care medicine at Aachen
- 17 University surgical department; is that correct?
- **18** A That is correct. We have a -- yeah. We have an
- 19 own intensive care unit for -- in our surgical
- 20 department at that time, and I was working there for
- 21 several years. And I have to pass an examine for this
- 22 and then I qualified as a specialist for intensive
- 23 care, surgical intensive care medicine as well.
- **24** Q And then from 2003 to 2006, you were
- 25 assistant medical director of the entire facility.

3390

- Can you please explain that?
- **2** A There has been two assistant medical directors or
- 3 vice chairmen in our department, and I was one of it.
- 4 So if the other two are not in the hospital, you are
- **5** responsible for everything. So everyone will know what
- 6 does it mean.
- **7** Q So in 2004, you became a specialist in
- 8 abdominal surgery. Briefly explain that to the jury.
- **9** A So a specialist in general surgery means that you
- 10 are -- that you know the standard operations and that
- 11 you can -- you're able to do them in full
- 12 responsibility. This visceral surgery, the specialist
- 13 for this means that you are able to perform advanced
- 14 surgical procedures. That means extended oncologic
- **15** resections, bowel resections, resections of the
- 16 esophagus or something like that and liver resection.
- 17 So you have to do another number of, but
- 18 now major operations, and then you have to pass an
- 19 examine and then you're allowed to do these operations
- 20 in full responsibility. And then you get the
- 21 specialist for visceral surgery. I don't know whether
- 22 it's here.
 - Q Is visceral surgery another way of saying
- 24 abdominal surgery?
- **25** A Yes.

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 7 of 108 PageID #: 113693

8

1 Q And from 2006 to 2009, I see that you had a 2 cooperation with the Helmholtz Institute.

Just briefly explain, please, what work youdid for those three years with biomedical engineering

5 in cooperation with the surgical department,

6 biomaterial science and engineering.

7 A The main focus of the entire university, but as

8 well of the hospital, is the focus of medical

9 engineering. And, therefore, one part of the

10 University Hospital is this Helmholtz Institute. It

11 includes five, six different institutes. 90 percent of

12 the employees are engineers. So it is the bridging

13 between engineering and medicine. And I had the

14 opportunity to work there for three years.

Q After that, did you return to AachenUniversity as the principal scientific investigator?

17 A It sounds a little bit difficult, but it's only

18 200 meters or 250 yards, I think. So I returned back

19 to the surgical department, because it was more easy to

20 coordinate this research activities then.

Q Were you the principal scientist supervising these research activities in biomaterial science research for surgical meshes to be implanted in

bodies, like the Gynemesh PS Prolift in this case?

25 A It didn't change since 2000.

3392

Q So that's true?
A And it's still there, yeah.

3 Q Now I'd like to talk a little bit about

4 your work between 1995 and 2005.5 In addition to being an abdominal surgeon

with all the specialties that you have described and

7 all the different certifications that you have received

8 and being a principal biomaterial science investigator

9 in the surgical department looking at tissue

10 engineering and histopathology, in addition to those

11 things, now I'd like to talk about any work that you

12 may have done with outside medical device

13 manufacturers. Okay?

14 A Yes.

21

22

23

24

1

2

6

15 Q Can you please explain to the jury this

16 consulting work that you did with outside medical

17 device manufacturers using your expertise from 1995 to

18 2005?

19 A So as I've said, in 1993 we've got the problem

20 with these implants, and, therefore, we established a

21 comprehensive work on these materials for, first of

22 all, to define some requirements and then to study

23 them, what happens there. And if you want to study the

24 effects of these materials, you need to have a lot of

25 various materials to define the impact. And,

1 therefore, it was very, very helpful to have someone

2 who provides you with the material, with the suture

3 material, so that you can then test the impact of all

4 the different properties to the tissue. And this has

5 been Ethicon. And it started in 1994, where we, in a

6 close collaboration, studied the impact of various

7 material modifications on the soft issue.

Q And when you say "we," is that in

9 collaboration between you and your group in Aachen and

10 Ethicon in Norderstedt?

11 A Yes, yes. It is a large group. It is several

12 different institutes within the hospital of Aachen. It

13 is five, six people from the R&D department of Ethicon

14 Norderstedt. And it's been about ten surgical

15 colleagues which are all integrated into this field.

16 Q How extensive was the work that was done 17 during that decade, from 1995 to 2005, between you and

18 Ethicon?

1

19 A It was a very close collaboration, so we have a

20 lot of phone calls, because, in the beginning, we

21 wanted to define. We had to make a -- we had to define

22 the requirements for this material, and then we made a

23 lot of tests, about 20 different materials. And so we

24 permanently exchanged the results. There were working

25 meetings at least four times a year. We have the

3394

entire group from Norderstedt came to Aachen, and where

a whole day we have been discussing what we have done,

3 the results and what has to be done in future.

4 Q When you began this consulting relationship

5 with Ethicon, was this the first time that the

6 scientific community had begun to look at the tissue

7 response in humans to surgical meshes?

8 A It was not the first time. There are some single

9 investigations in the '80s. But it was the first time

10 that you want to create a comprehensive scientific

11 support for a medical device and to make a specific

12 design for a specific use. That was the first time.

MR. GAGE: Your Honor, just wondering if

14 we're still on voir dire or if we're kind of getting

15 more into the substance.

16 MR. ANDERSON: I'm just trying to get

17 through his credentials.

18 THE COURT: Okay. Then just stay away from

19 what his investigations discovered and just outline his

20 career, that's fine.

21 BY MR. ANDERSON:

22 Q Explain what you have done over the last 20 23 years in terms of -- strike that.

years in terms or -- strike that.

24 We heard a little bit about your

25 biomaterial science research and your looking into the

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 8 of 108 PageID #: 113694

- 1 tissue response of surgical meshes like Prolift to the
- 2 human body. And you mentioned histopathology.
- **3** Tell the jury a little bit about your
- **4** training in histopathology over these 20 years, just
- 5 briefly.
- **6** A The analysis of histopathology to foreign body
- 7 materials, it's not a very simple question, even if
- 8 I -- I'm asked to do it briefly. Because what we
- 9 started to do to look to the soft tissues in 1994, I
- 10 went to the department for pathology, and there was no
- 11 one who could help us who could say that we knew how to
- 12 quantify or qualify the histological implants or the
- 13 cellular response to these materials. And they sent me
- **14** away.
- **15** And, fortunately, there has been a
- 16 colleague who made his residence in surgery there
- 17 before, so I know him. And he's a pathologist, Dr.
- 18 Klosterhalfen. I think he's well known for everyone
- 19 who is in this business. And he said, okay, I don't
- 20 know it either, but let's try. And, therefore, in this
- 21 year, in 1994, we started to establish the principles
- 22 how to analyze the soft tissue reaction. And he knows
- 23 a lot of different markers, and we together tested all
- 24 these markers, whether they are helpful to
- 25 differentiate between the good materials and the best
 - 339
 - materials. And that was established there, and you
- 2 will find it in the publications, in the early
- 3 publications, they focus on this principles how to make
- 4 this analysis.

1

- **5** And in the following years, we used this
- 6 knowledge, we improved permanently, we looked at -- I
- 7 looked at thousands of these stainings --
- **8** Q By stainings do you mean --
- **9** A Sections, histological sections. Where you look
- 10 at tissue --
- 11 Q Slides from tissue pathology?
- **12** A Yes.
- **13** Q Okay.
- **14** A Where you have the soft tissue and the
- 15 biomaterial and where you have to define what is the
- 16 extent of inflammation and fibrosis there.
- 17 Q Can I stop you right there?
- 18 You mentioned fibrosis. So was part of
- 19 what you were doing was looking at the body's responses
- 20 to meshes that may cause fibrosis or scarring? Is that
- **21** true?
- **22** A Yeah.
- 23 Q Shrinkage of the mesh once it's in the
- 24 tissue?
- **25** A Yes.

- 1 Q And the complications that result due to
- 2 fibrosis, shrinking in the human body?
- 3 A Yes.
- **4** Q So this work in terms of biomaterial
- 5 science, the tissue response and the histopathology and
- 6 your experience as an abdominal surgeon who had
- 7 implanted meshes, was this all being put together so
- 8 that you could analyze the problems that were happening
- **9** with patients with meshes?
- **10** A This was our big advantage to combine all these
- 11 three experiences. And you cannot separate this.
- 12 Q Great. Have you published -- let me go
- **13** back.
- 14 The jury has heard what peer-reviewed
- 15 literature means, so I don't want to go back through
- **16** that, but have you published in the peer-reviewed
- 17 literature?
- **18** A Yes.
- 19 Q How many publications do you have in the
- 20 peer-reviewed literature?
- 21 A You will find about -- more than 200
- 22 publications, and I hope the number will increase.
- 23 Q And how many of those relate directly to
- 24 surgical meshes either for the abdominal wall or the
- 25 pelvic floor?

- **1** A More than 100 of it.
- **2** Q How many times have those publications been
- 3 cited as references by other authors in the scientific
- 4 community?
- **5** A Last time I looked, it was more than 2,000.
- **6** Q So your work on surgical meshes in the
- 7 literature has been cited by other scientists over
- 8 2,000 times; is that correct?
- **9** A It's highly recognized, yeah.
- 10 Q Have you written books and published book
- 11 chapters?
- **12** A Several book chapters.
- 13 Q How many?
- **14** A 50, about 50.
- 15 Q How many of those 50 related to the issues
- **16** in this case, surgery involving mesh, biomaterials
- 17 science and tissue response?
- **18** A 45.
- **19** Q 45 books and book chapters?
- **20** A Book chapters.
- **21** Q Yes.
- 22 Have you been an invited lecturer to
- 23 conferences?
- **24** A Yes.
- **25** Q Approximately how many times -- I see in

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 9 of 108 PageID #: 113695

11

1 your CV that you've lectured over 200 times and 130 2 times as oral presentation as an invited lecturer. 3 So of those 330 times that you've given 3 Α

3400

- lectures, approximately what percentage of those were 4 relating to the issues in this case, surgical mesh, 5
- 6 biomaterials and tissue response and the problems that
- 7 can happen in a human being as a result of those?
- 8 It's about 90 percent or more.
- 9 Q 90 percent of the 330 times you've been
- 10 asked to speak?
- Α 11 Yes.
- 12 Q Have you been asked to speak by Ethicon at
- 13 conferences?
- Α Yes. 14
- Q 15 How many times?
- Α Some dozens. 16
- 17 Dozens of times.
- 18 And do you continue to be an invited
- 19 speaker for Ethicon at conferences?
- Α 20 Yes.
- Q When was the last time you were invited by 21
- 22 Ethicon to speak at a conference for them?
- 23 It was in the week of my deposition. So two days
- later on I was asked to give a presentation for Ethicon 24
- in Brussels, and the weekend I was asked to do a 25
 - presentation in Munich for Ethicon, to present the
- history of meshes, because in some regards, I represent 2
- 3 20 years of history of meshes.
- 4 Have you been invited to lecture to your
- 5 peers on pelvic floor meshes like Prolift?
- Α 6 Yes.

- How many times? 7 Q
- 8 Α About 10 to 15 times.
- 9 And the audience at these conferences where
- you've been asked to lecture on pelvic floor meshes, 10
- have there been gynecologists at the conferences? 11
- 12 Α Yes.
- 13 Q Urologists at other conferences?
- 14 Α Yes.
- Q 15 Urogynecologists at other conferences?
- Α Yes. 16
- 17 Q In fact, have you been asked by Ethicon to
- speak to urogynecologists at their Norderstedt facility 18
- 19 regarding pelvic floor repair meshes and how they can
- 20 create problems in the human body?
- Α 21 Yes.
- 22 Q Have you been a peer reviewer for
- scientific journals? 23
- 24 Α Yes.
- Q 25 Approximately how many different journals

- per year are you a peer reviewer where you are looking
- at your peers' submitted literature?
- It's varying a little bit between five and ten
- different journals per year. 4
- And how many different manuscripts do you 5
- review per year, in other words, publications that have
- been submitted, in order to determine whether or not
- they should be allowed to be published in the 8
- 9 scientific literature?
- 10 It's around 25 to 35 a year.
 - Do they relate to the fields of surgery,
- 12 biomaterials science, tissue reaction, histopathology
- 13 and wound healing?
- 14 Α Most of it, yeah.
- 15 Have you received a number of grants over
- the years? 16
- 17 Α Yes.
- Q 18 The jury may have heard about NIH grants.
- 19 We're talking about grants for you in Germany.
- 20 What is a grant, just briefly?
- 21 If you want to make a research project, it
- 22 usually costs money. And you need some resources,
- 23 personal resources consumers, and so you have to apply
- 24 to get the money. And usually this is reviewed. And
- 25 if it's accepted, then you get the resources and then
 - 3402
- you can start to work for it. And, therefore, a big
- time or -- yeah. We spend a lot of time to apply for
- 3 these grants to get the money for our research. And in
- Germany, it is the Ministry, it's the German Society
- for Research where you can go to a hospital, and we 5
- successfully got several grants, too, for our research. 6
- 7 Approximately how many grants have you
- 8 received over the years?
- Α 9 About 20.
- 10 So approximately 20 times someone has
- deemed your work to be important enough to fund it? 11
- 12 Α Yes.
- 13 Q And how many of those have involved
- 14 surgical mesh, biomaterials science, tissue response
- and histopathology of meshes like Prolift to be 15
- permanently implanted in a woman's body? 16
- 17 Α All except two.
- 18 Q Do you hold any patents?
- 19 Α Yes.
- 20 Q How many patents do you hold?
- 21 Α Seven.
- 22 Q Do they all relate to surgical mesh?
- 23 Α Yes.
- 24 Q Have you served as an independent
- 25 court-appointed expert in Germany?

	3403	Δ Ι	3405
1	A Yes.	1	body?
2	Q On approximately how many occasions?	2	A There is none.
3	A It's about three dozen, four dozen.	3	MR. ANDERSON: At this time, plaintiffs
4	Q So if you are three or four dozen, so	4	would offer Dr. Uwe Klinge as an expert in the fields
5	somewhere around maybe 30 or 40 times a court has	5	of abdominal surgery, biomaterial science, tissue
6	appointed you in Germany as an independent expert to	6	reaction and tissue engineering, histopathology for
7	come in and give your opinions?	7	surgical meshes in the human body.
8	A Yes.	8	MR. GAGE: Your Honor, we'll reserve cross.
9	Q You talked a lot about your hernia surgery,	9	THE COURT: Okay. The Court finds that the
10	your abdominal surgery and all the other things you've	10	witness is qualified to give his opinions to the jury
11	done. You aren't coming here today as a pelvic floor	11	as an expert in those fields. You can proceed.
12	surgeon, are you? I'm sorry. I asked the double	12	MR. ANDERSON: Thank you, Your Honor.
13	negative.	13	
14	You don't perform pelvic floor surgery.	14	DIRECT EXAMINATION
15	Correct?	15	
16	A That is correct, yeah.	16	BY MR. ANDERSON:
17	Q You're not coming in here as a	17	Q Did I approach you back in 2011 and ask you
18	urogynecologist. Right?	18	to be an expert in this case?
19		19	A Yes.
	5		
20	Q You are not a urologist. Right?	20	Q Did I agree to pay you for your time? A Yes.
21	A No. That is right, I'm not.	21	
22	Q I will try to do better. We will try to do	22	Q Did I ask you to review an enormous amount
23	better.	23	of materials and ultimately write an expert report in
24	You are not you are not a gynecologist.	24	this case?
25	Correct?	25	A Surely.
	3404		3406
1	A It is correct that I'm not.	1	Q Let's talk about the materials that I, over
2	Q So what is it about your background,	2	the course of that year-and-a-half, have sent to you
3	training, experience that you believe gives you an	3	and that you've reviewed.
4	expertise to talk to the jury today about a surgical	4	You've looked at over 500 Ethicon internal
5	mesh like Prolift that actually is implanted by	5	documents. Correct?
6	urogynecologists?	6	A At least.
7	A We have made extensive research, over 20 years,	7	Q Representing hundreds if not a few thousand
8	to look what happens if you use meshes in the soft	8	pages?
9	tissue, what has to be considerate to get an optimum	9	A Yes.
10	device. That is the focus of all our research in this	10	Q Over 100 to 150 pieces of literature?
11	field. And there is hardly anyone else who can who	11	A That is correct.
12	has this experience of as we have.	12	Q Depositions of at least 30 witnesses, some
13	Q By "we," do you mean you?	13	of them covering multiple days?
14	A Yes.	14	A Yes.
15	Q And I understand you're a humble person and	15	Q Numerous expert reports?
16	you're trying to give the "we" credit to others, but I	16	A Yes.
17	need to ask you now, because the jury is hearing from	17	Q Have you looked at somewhere between 15 and
18	you today, to put it simply, is there anyone else in	18	20,000 pages of documents?
19	the world who has studied over the last 20 years and	19	A Yes.
~~		20	Q Did I agree to pay you \$100 an hour for
20	published more articles, anyone who has done more work	20	. , , , .
21	than you in the area of surgical meshes for that	21	travel and \$500 an hour for the work that you've done?
		21 22	travel and \$500 an hour for the work that you've done? A That is correct.
21	than you in the area of surgical meshes for that	21	travel and \$500 an hour for the work that you've done?
21 22	than you in the area of surgical meshes for that would be used for the abdominal wall or the pelvic	21 22	travel and \$500 an hour for the work that you've done? A That is correct.

25 A

That is correct.

surgical implications for surgical meshes in the human

	Case 2.12-111d-02327 Document 2900-6 File 3407		3409
1	Q For all of the review that we just	1	to 10:35 a.m.)
2	mentioned, all of those documents and then writing a	2	
3	68-page report; is that right? Something like that?	3	THE COURT: Let's argue this motion about
4	A Yes.	4	tomorrow quickly.
5	Q Dozens of references in that report,	5	It's the expert argument for tomorrow?
6	preparing for and sitting for a two-day deposition,	6	MR. MAZIE: For Hinoul?
7	coming here and preparing for trial and then speaking	7	MS. JONES: I don't know which one you're
8	here at trial today, have I paid you somewhere around	8	talking about.
9	\$100,000 for that work?	9	THE COURT: You filed a motion on Piet
10	A That is correct.	10	Hinoul. Right?
11	Q Do you believe that when you work for	11	MR. MAZIE: Right.
12	someone that you should be compensated?	12	THE COURT: To prevent him from referring
13	A That is fair.	13	to any research or articles. It seems to go even
14	MR. ANDERSON: Your Honor, before I begin	14	further and suggests he can't refer to any manuals or
15	with the next portion, I was wondering if it would be	15	brochures, but you're not trying to suggest he can't
16	okay if I have the bailiff pass the allow the mesh	16	discuss the label or the patient brochure. Right?
17	to be passed around to the jury.	17	MR. MAZIE: No. It's really the
18	THE COURT: Sure. If there's no objection	18	literature, Your Honor. He's not an expert. He wasn't
19	from counsel.	19	even in the company back in 2004, 2005 and 2006. He
20	MR. GAGE: What is it?	20	didn't join until 2008. And, in fact, apparently he
21	MR. ANDERSON: The product, the Prolift.	21	didn't come to the United States until
22	THE COURT: Show Mr. Gage what you're going	22	THE COURT: Well, it may not even be an
23	to do, just in case he does have an objection.	23	issue. Ms. Jones may not be intending to take him
24	BY MR. ANDERSON:	24	through the medical literature. I don't know if you

THE COURT: Well, you know, I always have this two-way street thing going on. The bottom line is you put in a lot of evidence of things that occurred in 2008, 2009, 2010, and Mr. Slater argued repeatedly that the Ethicon people had admitted that everything that they knew in -- that everything that came out in 2009 they knew in 2005.

So, I mean, it's like when your witnesses are on the stand, they're saying you shouldn't be putting on post-surgical events, information. When they're on the stand, now you want to say they shouldn't be putting on post?

MR. MAZIE: They can do it, but not with this witness is my point. My point is, he's a fact witness. If they want to bring somebody in from 2005 to say this is what we looked at, this is how I drafted this, they can do that. It's not for this witness is our point. He's not an expert. He's a guy that came later on after all these -- everything that happened in

3412

this case happened. And they certainly are more than welcome to bring in anybody that was involved in those decisions. I don't have a problem with that. I mean, I thought we made that clear in the brief.

It's that Dr. Hinoul is not an expert and he was not there, so he's not a fact witness. He can't testify to facts that happened then because he's a fact witness. That's the point. He can certainly go into things back and forth, but the fact that he's now analyzed it in 2009 or 2010, I don't know how that affects what was done back in 2005.

MS. JONES: First of all, what he has done in the course of his day-to-day responsibilities now is done as a fact witness. In terms of other aspects of this, Your Honor, he's already been cross-examined by -- on a significant number of things that relate to pre-2006. Certainly we are entitled to have him explain his answers and go through that. And the plaintiffs chose to go with him.

20 MR. SLATER: Judge, we don't object 21 obviously to the extent I asked Mr. Hinoul questions, 22 obviously he can be asked by counsel about what I asked 23 him. And I kept it very narrow. I did not ask him one 24 question about the IFU. I didn't ask him any questions about the brochures or the warnings or anything about

that. Zero. And our position is he wasn't -- with regard to warnings and things like that, he shouldn't

be talking about what was done in '04 or '05, because

4 that's factual testimony beyond the scope of what he

was asked when we put him on the witness stand within 5

6 the scope of his corporate designation, which is for 7 our purposes.

8 If he wants to talk about warnings that 9 were provided in '08, '09 and 2010, I mean, I suppose 10 he could, but then he's going to start implicating all 11 the issues the defense doesn't bring in, because those 12 warnings are all the warnings that -- the warnings that 13 existed when he came to the company, that was right 14 when they were changing all their warnings, when the 15 public health notifications were coming out and they 16 were reacting to that, when the FDA was telling them to 17 change their warnings. So that factually he's at the 18 company in the point in time when the defense doesn't 19 want to bring that in, so -- and those warnings 20 post-date Linda's surgery, so I wouldn't expect them to 21 ask him any questions about warnings for those reasons.

22 You know, I asked him primarily questions 23 about the design intent, which was within his 24 designation, and the complications the company knew of,

because he was designated from medical affairs to talk

25 3414

about the known complications. I mean, we've been

through the transcript. That's the -- pretty much what 3 he was asked about. There may be a question here or a

4 question there about a few other things, but that's

5 pretty much it.

6

7

8

9

10

11

12

13

14

15

16

And I studiously stayed away from many areas that I didn't want to open the door on, because I didn't think it was appropriate to give him those questions. And factually he's not at the company in that time period. So as far as the literature, the other part of the motion, obviously, is just that they have an expert, you know, presumably, who is going to

THE COURT: Well, she's already said he's not going to talk about the literature.

MR. SLATER: Okay. I might have...

17 THE COURT: You have asked him about the

18 risks and benefits, or at least the risks and the

talk about the literature, so --

19 complications. They certainly are going to be able to 20 ask him about the benefits to counter that. But this

21 isn't within the scope of your cross. That's not the

22 issue. The issue is -- and I realize the brief wasn't

23 fashioned that way, but the issue is what can he

24 testify to.

He is a corporate representative. Can she

- 1 put him on the stand to go through the IFU? Does he 2 have to have been there when that IFU was published for 3 her to go through the IFU with the jury with him? I 4 don't think so. That's not expert testimony to say this is what it said, this is what we warned about. It 5 6 would be nice to have a person from 2005, but then you 7 didn't call the person from 2005, you called him. And
- 9 MR. SLATER: We videotaped her. It was 10 Charlotte Owens.

now they're going to call him.

11 MR. MAZIE: We asked for her to come in. 12 MR. SLATER: And David Robinson, we 13 videotaped him, too. He's not available either. 14 MR. MAZIE: So we have technically called

them. I mean, you know, that was implicit -- the reason there's a corporate designee is for our purposes, not for theirs. It's to make -- because we need someone with the most knowledge to educate themselves, and that was discovery.

MR. SLATER: He was only designated on specific issues, and I focused on only really, you know, the design intent and the complications. I really didn't go beyond that with him, I mean, other than a few straggling questions on --

THE COURT: Well, I'm assuming that her

focus is going to be on the design intent, the

complications and the benefits.

2 3 MR. MAZIE: My only concern is how does

that cross over and does it cross over into expert testimony from a guy who wasn't even there when this

6 was happening? That's what we wanted to bring to Your

7 Honor's attention. They're going to have Dr. Murphy

8 tomorrow, I think. He's going to go into all of this.

- 9 Then they are going to bring in someone who wasn't even
- 10 at the company until two years after Linda has it
- 11 implanted in her, and he's really giving the same
- 12 testimony. I have no problem with him going into what
- 13 he did in '08, '09, '10, '11, '12 to today. But to go
- 14 back and do what Dr. Murphy is doing and to maybe go
- 15 through why it's safe, because he studied on it after
- 16 he came to the company, is really expert testimony.
- 17 It's inappropriate.

MR. SLATER: And cumulative. I mean, we dropped witnesses. We dropped Dr. Margolis in strict adherence to Your Honor's rulings that we couldn't have two people talk about causation. So we dropped someone who would have been a very persuasive witness on that issue.

24 THE COURT: If his testimony is repetitive

25 or cumulative, you can object. If the questions are

- outside the scope of his ability to testify, you can
- object. Let's wait and see where it goes. If she
- 3 wants to put the IFU up there and go through and this
- 4 is what was in and this is what your company did warn
- about, I'm going to let her use him for that purpose. 5
- That I don't think is improper. I think you asked him
- about the IFU -- well, you might not have asked him
- about the IFU, but you definitely have asked him, you 8
- 9 know, things that were relative to 2005, or at least
- 10 you argued that they were at the time.

11 MR. SLATER: On the complications, 12 absolutely. Knowledge of complications, that's what I 13 asked him about. I didn't ask him one question about 14 what they warned about on purpose.

15 MR. MAZIE: Can I ask for clarification? 16 With regard to the primary emphasis of the motion,

17 which really was going through the literature --18 THE COURT: Well, the primary thing was 19 literature, which she said he's not going to do, except 20 that to the extent that he wrote a report, he may 21 testify as to what his report was. But he's not going 22 to testify to this is a learned treatise from so and so 23 and this is what the finding was and this is what the 24 statistics from that report were and that's what they

25 mean. That's going to be confined to her expert. 3416 3418

1 And the primary thrust of your motion was devoted to learned treatises. And you have won on that 3 part, won by concession, because the defense has agreed

that they weren't going to use him for that.

5 MS. JONES: Thank you.

6 THE COURT: So when it comes to where he's 7 testifying, if you think he's going beyond the bounds,

8 then you're just going to have to object as we go

9

along. We're just going to have to rule, but, you

10 know, just to say to him, is this what was in effect at

11 the time, he's a corporate rep, even though I

12 understand what you're saying, that he should be

13 confined to a period of time, but he can, as the

14 designee of the company, stand here and say this was

15 our warning in 2005.

16 MR. MAZIE: Okay.

17 THE COURT: Now, he is subject to cross 18 about whether they changed it or not. Well, we'll deal 19 with that bridge when we get to it.

20 MR. SLATER: That was my only concern, 21 obviously.

THE COURT: But at this point, he'll be 23 testifying as to, you know, whatever he knows. And as a corporate representative, he does know what the IFU was. He knows what an IFU is. He knows what a patient

22

24

1 brochure is. Can he testify that in 2005 we did this the first result. So we were able to produce a 2 for this reason or that reason? Probably not. But he modified mesh that is adapted to the physiological 3 can say, this is what the known benefits were at that requirements. And in this study, we could show that it 4 time, and this is what the known downsides were, based 4 really improves the tissue integration. on the literature that exists within the company. I'm 5 And just be a little more specific if you 5 6 going to allow him to do that. All right? 6 would, please, about what you mean by, to define the 7 7 MR. SLATER: We should wait and see if it's physiological requirements of the mesh? 8 cumulative and deal with it? 8 The basic principle of this mesh was that we 9 9 THE COURT: Anything -- yeah, obviously. I found out that most of the older meshes have been 10 don't expect him to be a duplicate of their expert in 10 oversized. They are much too strong in comparison to any way. I mean, there's going to be an overlap, 11 what is needed in the abdominal wall. Therefore, we 11 12 because the jury has to hear it from a company 12 could reduce the amount of material down to 30 percent. 13 13 representative as to what the company knew, too. I And that means that we were able to enlarge the pore 14 size. And this mesh has a reduced amount of work and 14 mean, you can't -- I think they have to have some 15 company representative. And if, as they've 15 has large pores of more than 3 millimeter. 16 represented, they can't bring in some of these other When you say "this mesh," you're not 16 17 people, then -- I'm going to let them have some leeway 17 talking about the Prolift mesh, you're talking about 18 18 with that. I'm just going to let you know that. the mesh that you were studying. Correct? 19 19 They're not going to go into literature, they're not That was this new development. 20 20 going to be cumulative, and we'll see where it goes. Okay. Go ahead. 21 Okay. Then in 1998, you had another 21 MR. SLATER: Fair enough. 22 THE COURT: And if you feel that we're 22 publication. Briefly explain to the jury what was 23 going over those boundaries, object question by 23 brought to the scientific world as a result of that question. 24 24 publication? 25 25 Α MR. SLATER: Thank you. One major concern of these meshes that is our 3420 3422 1 THE COURT: We'll proceed. experience during the operations was the strong scar 1 2 formation and the shrinkage and the folding of these 3 (The jury enters the courtroom.) 3 meshes. So, therefore, we wanted to test whether these 4 new meshes with the larger pores really can reduce the THE COURT: Continue with the witness. 5 5 amount of shrinkage. And in this preclinical study, we 6 MR. ANDERSON: Thank you, Your Honor. 6 could show that both are of polypropylene, but now we have a mesh material with lower weight, with larger 7 BY MR. ANDERSON: 7 8 Q If you could put up slide 1, please. 8 pores, and in fact, the degree of the extent of 9 Dr. Klinge, you had indicated to the jury 9 shrinkage could be reduced significantly. 10 before the break that you'd written over 100 articles 10 And just to be clear, when we're talking that relate directly to surgical meshes in the human 11 11 about larger pores, the jury just handled the Prolift 12 body. Correct? 12 mesh. We're talking about the holes that go throughout 13 Α 13 That is correct. the mesh; is that correct? 14 Clearly we're not going to go through those 14 Α That is correct. 15 Q And then in 1999 --15 100 articles or anywhere close to it, but I did want to bring to the jury's attention six of your important 16 THE COURT: Well, wait. Back in the 1998, 16 17 ones, okay? 17 it says 30 percent to 50 percent PP mesh shrinks. Α 18 18 Yeah, that is okay. Was the mesh shrinking between 30 and 50 19 In 1998, PLT0268, what was that study about 19 percent or was that a reduction in the amount of 20 20 in terms of mesh must adapt to the physiology? Briefly shrinkage? What does that 30 to 50 percent mean? 21 21 explain that to the jury. THE WITNESS: The one mesh, the bad mesh

15

18

- 1 Q To clarify that point -- thank you, Your
 - Honor -- it's not actually the mesh itself shrinking,
- 3 it's the scar around the mesh that's pushing it
- 4 together; is that correct?
- **5** A Yes, that is absolutely correct. But in our
- **6** terms and in our discussions, we, some years ago,
- 7 stopped to make this differentiation, because everyone
- 8 knows that polypropylene does not shrink itself. It's
- 9 a wound contraction.
- 10 Q And when we talk about contracting mesh or
- 11 bunching mesh or shrinking mesh, we're talking about
- **12** the same thing, just different words. Correct?
- **13** A Yes.

1

2

- 14 Q Speaking of the foreign body reaction, what
- 15 did you publish in 1999, Dr. Klinge?
- **16** A So our next point was that we wanted to know what
- 17 happens to this reaction of the tissue to the foreign
- **18** body materials after long term, whether it sometimes
- 19 ended or not. And in this study of human explants, we
- 20 could show that there is an ongoing inflammation at the
- 21 interface between the fiber and the surrounding tissue.
- 22 And it never ends. It's going to be a little bit
- 23 smoother over the years, but you always have some sort
- 24 of inflammation there. And it is like a chronic wound
- 25 which can persist for, yeah, lifelong.

- Q And then in 2002 you published some other
- 2 findings. Explain that to the jury briefly.
- **3** A The basic question was what was the reason for
- 4 this scar formation? Was it some cells, was it some
- 5 inflammation or -- and in this study, we could identify
- 6 that the pore size, it's the outstanding critical
- 7 component that defines whether you have a lot of scar
- 8 formation around the mesh. And, therefore, pore size
- 9 is -- mainly determines how good a mesh will be
- 10 incorporated and how safe it is in the last
- 11 consequence. And there we saw that if you have small
- **12** pores with less than 1 millimeter in diameter, usually
- 13 all this area is filled just by scar tissue, what we
- 14 don't want to have.
- **15** Q And did Ethicon fund that study in 2002?
- **16** A Yes.
- 17 Q So am I correct, Dr. Klinge, that by 2002,
- **18** Ethicon knew that in order to prevent mesh shrinkage
- 19 and the problems associated with it, you needed to have
- **20** pore sizes greater than 1 millimeter; is that correct?
- **21** A It's correct. All these findings have been
- **22** extensively discussed together at our working meetings.
- 23 Q And do you have an opinion as to whether or
- 24 not Ethicon knew by 2002 that pore sizes, these holes,
- 25 would have fibrotic bridging, scarring across the hole,

- 1 have a scar plate around the mesh and lead to shrinkage
- 2 and complications in patients if those pores were not
- 3 greater than 1 millimeter? Do you have an opinion?
- 4 A Yes.
 - Q And did they? Were they aware of this?
- **6** A Yes. Of course they were aware of it, because
- 7 that -- one of the reasons that we -- or one of our
- 8 advantages were that we published all these details so
- 9 that the scientific community has free access to all
- 10 these results, all manufacturers have free access of
- 11 all these results. So the data came maybe one, two
- 12 years before. But in the moment where this is
- 13 published, everyone has free access to this
- 14 information.
 - Q Thank you, Dr. Klinge.
- **16** And then just two more here I want to go
- 17 through. 2005, lightweight, large pore concept.
 - What was that a publication regarding?
- **19** A All these findings together were just summarized
- 20 in this article, and it was named as the lightweight,
- 21 large pore concept. And the various aspects are much
- 22 more -- they were summarized in this article, and this
- 23 was a term, it's a concept.
- 24 Q So is it fair to say that between 1995 and
- 25 2005, you and your group in Aachen brought to the
 - 3426
- 1 scientific world the idea of tissue reaction to
- 2 surgical meshes and how you would measure it?
- 3 A Yes.
- **4** Q Brought to the scientific world the fact
- 5 that polypropylene meshes can shrink if you don't have
- 6 the proper design requirements?
- **7** A That is correct.
- 8 Q Brought to the scientific world that there
- 9 is a foreign body reaction to surgical meshes and it
- 10 will have a chronic inflammatory response, chronic
- 11 wound, that the design of the mesh may be able to
- 12 reduce?
- **13** A Absolutely.
- 14 Q And in 2002, did you, you and your
- 15 colleagues, bring to the scientific world for the first
- 16 time the idea that all of this work could be -- that
- 17 some of these problems would be avoided if you had pore
- 18 sizes that had 1 millimeter in diameter throughout the
- 19 course of the mesh?
- 20 A That has been the main message of this work and
- 21 many presentations following and before.
- **Q** Was the purpose for doing this work in
- 23 order to try to improve patient safety?
- **24** A Yes.
- 25 Q Was the purpose of this work to try to help

1 manufacturers design better meshes for the area of the you have rather small pores that are even made smaller 2 body where they were going to be placed? by some filaments crossing these pores. You have a 3 MR. GAGE: Objection, leading. 3 complete collapse of pores if you placed it under MR. ANDERSON: I'll withdraw it. mechanical strain. And this together leads to an 4 4 5 BY MR. ANDERSON: incorporation of the entire device into scar formation. 6 Q What was the purpose of this work other 6 And that means by maturing of the scar shrinkage, that 7 than the safety in terms of the design for the entire area of the mesh gets integrated into the 8 manufacturers to be able to have this knowledge? 8 scar plate. And in the area of pelvic floor, this is 9 Α 9 It was proven by our work that it was possible disastrous in regard to the function of the organs to 10 that defining the requirements, designing a better 10 the dynamic of the structures in the pelvic floor. 11 11 mesh, studying it, that this can improve the tissue Do you have an opinion, Dr. Klinge, as to 12 response to these mesh materials and improve the safety 12 whether or not Ethicon was aware, prior to the Prolift 13 launch in March of 2005, of these problems? 13 of the patient. And that was later on, and in these years as well, there -- it was -- we added a lot of 14 No doubt. 14 15 clinical studies to show this. It was not only 15 Q Dr. Klinge, you were telling the jury preclinical work, but all this together confirmed for 16 earlier about these years that your group in 16 17 many, many, many times that it is an advantage. And, 17 Norderstedt would have meetings and things like that 18 18 meanwhile, large pore meshes in Germany and in Europe, with the folks at Ethicon Norderstedt. 19 19 it's outstanding. Do you recall that? 20 Α 20 Q Okay. Doctor, I'm going to ask you about a Yes, yes. 21 couple of opinions. And I want to let you know that 21 At any of the meetings prior to the launch 22 any of the opinions that you state here to the jury and 22 of Prolift in March 2005, were there discussions about 23 before this Court today, according to New Jersey law, 23 Ethicon's idea of putting mesh into a woman's pelvic have to be stated to a reasonable degree of scientific 24 floor? 24 25 Α 25 or medical probability. We never have been involved in the development of 3430 3428 1 You don't have to use those words, just can the Prolift, but it was -- I had a discussion with we assume that if you're going to offer opinions, that 2 Brigitte Hellhammer who --2 3 it is stated to a reasonable degree of medical or 3 Q Hold on. Brigitte Hellhammer? 4 scientific probability, unless you tell us otherwise. 4 5 Fair enough? 5 Α Brigitte Hellhammer. Q 6 Α 6 That is fair. Was she an Ethicon employee from After your review of tens of thousands of 7 7 Norderstedt? 8 pages of documents, deposition testimony, your 20 years 8 She was an employee and working at the R&D 9 of work in the field and your ten years of work with 9 department in Norderstedt, and she was part of this 10 10 Ethicon, Dr. Klinge, do you have an opinion as to group that regularly came to Aachen to discuss all 11 these results. And in 2000, she told me that there 11 whether or not Gynemesh PS in Prolift is safe to be 12 permanently implanted in a woman's pelvic tissue? 12 is --13 Α 13 Yes, I have an opinion. MR. GAGE: Objection. 14 And what is that opinion? 14 MR. ANDERSON: Admission. 15 Α It is not a safe design and it never had a chance 15 MR. GAGE: May we approach? 16 to be. 16 17 Q To be safely implanted in a woman's pelvic 17 (The following occurred at sidebar:) tissue? 18 MR. GAGE: Your Honor, I object to the 18 19 Α Yes. 19 witness on the basis of hearsay of providing an out of Q 20 20 Do you have an opinion as to -- strike court statement. And I wouldn't normally approach just 21 21 that. for that, but I figure this is a good to time to 22 What is the general basis of that opinion 22 approach on a bigger issue. that Gynemesh PS in Prolift could never be safely 23

24

25

This is an expert witness who has been

interactions with Ethicon obviously formed part of the

designated solely as an expert witness. His

23

24

25

implanted permanently in a woman's pelvic tissue?

The structural disadvantage of this mesh is that

1 basis of his expertise and it's just historical fact of

2 what his job function is. So for that reason, I

- 3 thought it was appropriate not to object and let the
- 4 witness get into this. But it appears that where we're
- 5 headed now is a factual historical recitation by the
- **6** expert of what Ethicon -- of his personal interactions
- 7 with Ethicon as to what they knew and when they knew
- 8 it. And as an expert witness and solely designated as
- **9** such and not designated as a fact witness, I would
- **10** object to the witness going in that direction.

12

11 MR. ANDERSON: It's an admission by Ethicon

as to the fact that they were going to put these meshes

- 13 in the pelvic floor. He was their consultant at the
- 14 time. He was their expert consultant at the time. He
- 15 talked about all of the work that he did with them in
- **16** terms of trying to improve the design of various
- 17 things, and what he's about to tell this Court and this
- **18** jury, if Your Honor will allow it, is that when they
- **19** told him that they were going to do that, he said then
- 20 you better use all these principles that we've been
- 21 working on for the last many years if you're going to
- 22 put it in the pelvic floor. Then we're going into the
- 23 e-mail showing that they didn't listen to him.
- 24 THE COURT: I'm going to allow the fact
- 25 testimony as well as the expert testimony. He had

3432

- 1 factual interactions with them. I can't -- certainly
- 2 someone can testify as both a fact witness and an
- 3 expert witness. And I can't believe that -- well, it's
- 4 not that I can't believe it, but I think it's obvious
- **5** from the beginning that he's been called both as an
- 6 expert and because he previously had been a consultant
- 7 for Ethicon. That's been mentioned several times.
- **8** I'm going to allow it. This is an
- 9 admission. It's not hearsay. And your objection is
- **10** overruled but preserved for the record.
- 11 - -
- 12 (The sidebar ended.)
- 13 - -
- 14 BY MR. ANDERSON:
- **15** Q Let's reorient ourselves to where we were.
- I had asked you if in any of your meetings
- 17 as a consultant for Ethicon whether or not the idea
- 18 that Ethicon was thinking about using surgical meshes
- **19** in the pelvic floor was brought to your attention at
- 20 one of these meetings.
- 21 Do you remember where we were in our
- 22 testimony?
- 23 A Yes, yes.
- **24** Q Okay. And you were telling the jury about
- 25 that meeting that you had with Brigitte Hellhammer?

- 1 A Yes.
- **2** Q Please start over or continue in that.
- **3** A Certainly. In 2000, she told me that it was
- 4 planned to use meshes for the reinforcement of the
- **5** pelvic floor. And I told her that, in this case, they
- 6 should adopt the principles that we developed the years
- 7 before to define the requirements, to make a design and
- 3 to focus on large pore mesh constructions, that they
- 9 should use these principles to avoid damage by other
- **10** structures.
- 11 Q And when you're talking about requirements,
- 12 you told her about that it needs to adapt to the
- 13 physiology of the area where they're going to place it?
- **14** A Yeah. But it has to be defined for the pelvic
- 15 floor. We did it just for the abdominal wall, but it
- 16 has to be defined for.
- 17 Q So the work that you had done with Ethicon
- 18 up at that point, you had defined the requirements for
- 19 the abdominal wall. Is that what you're saying?
- **20** A Yes.

21

- Q But it had not been defined for the pelvic
- 22 floor for putting mesh down there. Correct?
- 23 A Yes, correct. But it should have been done, yes.
- Q Did you explain to her that it would be
- 25 unsafe to do that if you hadn't defined these
 - 3434

- 1 requirements?
- 2 A Yes.
- **3** Q Out of all of the depositions and the
- 4 documents reviewed, could you tell whether or not she
- 5 actually followed your advice? Did they in fact follow
- 6 your advice? Did they use these principles when they
- 7 designed Prolift?
- **8** A Obviously they did not, because the Gynemesh PS
- 9 or the Prolift does not show these structural
- 10 requirements. What we found out was essential.
- 11 Q In order to be -- you mean essential in
- 12 order to be permanently implanted in a woman's pelvic
- 13 tissue?
- 14 A Yes. And to be safe and to not make this scar
- **15** tissue response.
- 16 Q If we could look at the next slide, please,
- **17** Uri.
- 18 And this is --
- 19 Dr. Klinge, you have seen these e-mails; is
- 20 that correct?
- **21** A That is correct.
- **Q** I believe the jury has seen these as well.
 - July -- June of 2003, an e-mail from Michel
- 24 Cosson to Scott Ciarrocca.
 - Who is Michel Cosson?

23

	3433		5457
1	A He's one of the inventor or promoter of the	1	is launched?
2	Prolift.	2	A That is correct.
3	Q From your review, you understand Scott	3	Q Indicating these problems?
4	Ciarrocca was the Ethicon R&D team member that was the	4	A Yes.
5	head of the Prolift project?	5	Q And this is a year before Prolift was
6	A That is correct.	6	launched indicating these problems. Correct?
7	Q E-mail, "The problems are more erosion,	7	A That is correct.
8	retraction. It is possible to have a recurrence, but	8	Q You were still a consultant with Ethicon in
9	it is usually due to a retraction of the mesh and the	9	2003-2004. Correct?
10	arms of the mesh are still left in place in those	10	A That is correct.
11	cases."	11	Q After this meeting in which you warned
12	And then the second e-mail, the e-mail from	12	Brigitte Hellhammer about the problems if they didn't
13	Ophelie Berthier to Zenobia Walji, May 10, 2004, you've	13	use the right design for something that was going to go
14	seen that as well. Correct?	14	into a woman's pelvis, did they come to you and say, we
15	A Yes.	15	have got problems with erosion and retraction, can you
16	Q And in that e-mail, it says, "I know you're	16	please help us on this, Dr. Klinge?
17	working on the new mesh materials with Gene and I'd	17	A I was never contacted in this field.
18	like to share with you the inputs of Prof. Jacquetin	18	Q When an e-mail comes from the people who
19	and Dr. Cosson."	19	invented the TVM technique a year before the launch
20	And you know that Prof. Jacquetin is who?	20	indicating shrinkage, pain, dyspareunia, what needs to
21	A He's the other inventor of this procedure.	21	be improved is shrinkage, did they come to someone who
22	Q "Their main concern is now the shrinkage of	22	had published on shrinkage and ask him to help them?
23	the mesh, which may lead to pain, dyspareuniaindeed	23	MR. GAGE: Objection.
24	now they have tremendously improved the technique,	24	BY MR. ANDERSON:
25	lowered the erosion rate, what needs to be improved is	25	Q You?
	3436		3438
1	the shrinkage of the mesh (in this case, Gynemesh	1	MR. GAGE: No way the witness can know
2	Soft)."	2	that.
3	Do you see that?	3	THE WITNESS: That it
4	A I see it, yeah.	4	MR. ANDERSON: Let me ask the witness.
5	Q These e-mails in 2003 and 2004, are they	5	BY MR. ANDERSON:
6	significant to your opinions in this case?	6	Q Did they come to you and ask you that?
7	A Yes. But the contents of these meshes	7	MR. GAGE: Your Honor, that wasn't the
8	messages is not really surprising, because they just	8	question. The question was, did they go to anyone.
9	form out what was the fear what will happen. So at	9	THE COURT: He's rephrasing whether they
10	that time point, yeah, they should stop and study it.	10	came to him.
11	Q Stop the project, study the problems?	11	MR. ANDERSON: Yes, ma'am. Sorry.
12	A Yes. Would be most appropriate.	12	BY MR. ANDERSON:
13	Q Did they do that?	13	Q Did anyone come to you when they became
14	A No.	14	aware of these problems with Gynemesh PS in the Prolift
15	Q If we could see the next slide, please.	15	a year before the launch?
16	Before we do that, if we could go back.	16	A No, they didn't come.
17	These e-mails, you said your meeting with	17	Q Had they come to you, would you have been
18	Brigitte Hellhammer was in 2000. Correct?	18	willing to use the work that you'd been putting in for
19	A Yes.	19	five years to try to help them avoid these problems?
20	Q Then the e-mail on the left is 2003.	20	A Of course.
21	Correct?	21	Q Show the next document, please.
22	A Yes.	22	You reviewed this document as well, Dr.
23	Q And then this one is 2004?	23	Klinge?
24	A Yes.	24	A Yes.
25	Q So this one is two years before the Prolift	25	Q The jury has seen this. This is an Ethicon
17/11/	1/2013 11:51:09 PM Page 3435 to	1438	of 3681 16 of 106 she

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 19 of 108 PageID #: 113705

- 1 expert meeting in 2006.
 - 2 What's your understanding as to why Ethicon
 - 3 was having this meeting with inside consultants and
 - 4 outside consultants in June of '06?
 - 5 This meeting was done because of these problems,
 - 6 they are looking for better materials. And, therefore,
 - 7 they invited all these people who have some experience
 - 8 there to think about this.
 - 9 Q To try to replace the Gynemesh PS mesh in
- 10 Prolift?
- Α Yep. 11
- 12 Q And this is a year after launch?
- 13 Α Yes.
- Q 14 June of 2006. Correct?
- 15 Α Two years after the e-mails.
- Q And down below, you see J. Holste and 16
- 17 Brigitte Hellhammer.
- 18 Do you see that?
- 19 These are two of the colleagues that are
- 20 regularly at our meetings in Aachen.
- 21 Well, in fact, Brigitte Hellhammer, she's
- 22 the woman that you had this conversation with at these
- 23 meetings in 2000 about the problems that could occur if
- they didn't design Gynemesh PS right. Correct? 24
- 25 Α That is the woman I talked with.

3440

- 1 Q You see the other participant in this is
- Dr. Klosterhalfen who you said was a colleague of yours 2
- 3 for the last 20 years?
- Α Yes. 4
- O 5 Also an Ethicon consultant. Correct?
- Α 6 Yes.
- 7 And if we could see the next slide, please.
- 8 Under the meeting minutes that -- regarding
- 9 what Prof. Klosterhalfen told the group, I'd like to
- 10 talk a little bit about that first line, under
- "Biological response to surgical mesh," where it says, 11
- 12 "Huge surface area of meshes, in other words, more than
- 13 300 meters of suture material."
- 14 Do you see that?
- 15 Α Yes, I see it.
- 16 Dr. Klinge, did you make the calculations
- 17 of how much suture material is in this Prolift total,
- if we were to unravel it and string it end to end, how 18
- 19 much suture material is in this product?
- 20 Α If you stick to the same size, it is about
- 21 300-400 meters. That means about 400 yards.
- So if you were unravel this, there is 400 22
- yards, four football fields worth of polypropylene 23
- 24 woven into that; is that correct?
- Α 25 That is correct.

- 1 Q When he says even after 20 years the tissue
- 2 is still reacting to the mesh, is that what he's
- talking about, reacting to these four football fields
- 4 of suture material?
- 5 Yes, that is correct.
- 6 Let me ask you this.
- 7 If someone comes in front of this jury and
- 8 says it's sufficient that we have 50 years, 50 years of
- 9 usage of polypropylene sutures in the human body,
- 10 therefore, we knew the Prolift would be okay in a
- 11 woman's pelvis, what would you say to that, Doctor?
- 12 This is not sufficient to state this, because we
- 13 don't have, for example, polypropylene meshes like
- 14 Prolift for 50 years. We don't even have them for the
- 15 abdominal wall for 50 years. We only have some sutures
- 16 that are there in 50 years. So it mainly depends on
- 17 the configuration of this polypropylene. So any
- 18 statement just saying this polymer is safe or not safe,
- 19 it doesn't meet the point. It only depends in what
- 20 form this polymer is implanted in the body.
 - Does it depend on where it's going to be
- 22 implanted in the body?
- 23 And where, of course, yeah.
- 24 Does it depend how much of it is going to
- 25 be implanted in the body?

3442

- 1 All this is correct. And then you have to look
- to the function. So you have to study it for every
- 3 configuration, for every function, for every indication
- whether it fulfills the requirements. So, therefore,
- 5 it is essential to define, to design and then to study
- 6 it.

- 7 Is it also essential to know what the
 - design, for instance, the pore sizes, will be if you're
- 9 going to place a polypropylene mesh in a woman's pelvic
- 10 tissue for the rest of her life?
- 11 There are countless further studies showing that
- 12 there are good polypropylene meshes and there are bad
- 13 polypropylene meshes, and that you can show the
- 14 difference in the tissue response and in the clinical
- 15 behavior and the clinical outcome. So there is a huge
- 16 amount of literature showing that there can be better
- 17 polypropylene meshes and polypropylene meshes with a
- 18
- higher risk. So any statement to say polypropylene is
- 19 a good guy or a bad guy, yeah, it is not helpful.
- 20 Q You have to put it in context; is that correct? 21
- Α 22 Yes.
- 23 Q Now, you're not telling the jury that
- 24 polypropylene mesh, surgical mesh, could never at any
- point in history be safe in a woman's pelvis; is that 25

1 correct?

2 Α No. That is the same absolute statement that is 3 not appropriate. So there may be some times some 4 polypropylene structure that can be used in the pelvic floor, but it has to be designed, it has to be shown 5 6 that it is like this. And in the moment, I don't know

Q Have you seen one for the last 20 years that would be polypropylene mesh appropriately designed for a woman's pelvic floor?

11 Α No.

any.

7

8

9

10

15

16 17

18

12 Q The next line, if you could, please, Uri, 13 "Fibrosis is responsible for complications in mesh 14 usage."

So the next thing that Prof. Klosterhalfen said after he was talking about these 300 meters of suture material, it says, "Fibrosis is responsible for complications in mesh usage."

19 Fibrosis, that's the scarring you're 20 talking about that can occur around meshes?

Α 21 That is correct.

22 Q And the amount of scarring that you get, 23 will that be dependent upon the mesh design?

24 Yes. It depends from the amount of the material,

25 from the mesh design, from the surface and from the

3444

1 pores.

4

5

6

10

2 Q Okay. And then he mentions foreign body 3 reaction.

Let's just talk briefly with the jury about what happens when our bodies have a foreign invader. Next slide, please.

So if you -- if you're injured by a foreign body, 7 8 so if you get a splinter into your finger, then

9 immediately the body tries to make a defense system

there to destroy and to eliminate this foreign body. 11 It is done by some local cells. They are building a

12 wall around this foreign body. And they are attracting

further cells, helping them. You are aware of this 13

14 phenomenon because you are feeling the swelling, you

15 are getting -- you feel some pain, you see the red skin

16 around it. And all this is the acute inflammation if

17 you get a foreign body, a splinter, in your hands. And

18 if you get two, or these two splinters will be

19 integrated into this acute inflammation.

20 So after one week, two week, the body may 21 recognize that it is impossible by these small cells to remove this foreign body. Then it will go to a chronic 22 23 inflammation. That means that you have a wall of

24 inflammatory infiltrate around these foreign bodies,

25 and outside of this, scar formation. And this scar may build up a border between the neighboring tissues and

this foreign body. And this is a situation that

persists lifelong, as long as the splinter or the mesh

4 remains in the body. So this is a permanent situation

there. You have an increased remodeling, the cells are

6 going and coming, but you have this huge amount or this

amount of scar tissue as a border between this foreign

8 body and the neighboring tissues.

9 And how is the amount of scarring related

10 to the amount of the foreign body?

11 It's quite clear, the bigger the foreign body,

12 the bigger the inflammation. And the bigger the

13 inflammation, the bigger the scarring. That can

14 clearly be shown, and this is true for many diseases as

15 well, not only for foreign bodies.

16 When you were talking about scarring, 17 especially when it comes to the scarring that forms 18 around Gynemesh PS, once a scar --

19 -- ever -- always a scar. There is no way to --

20 by the body to remove this.

21 So when we're talking about these foreign 22 bodies, explain to the jury about this inflammatory

23 process and the scarring as it relates to the diagram

24 you see in the middle, if you could just explain the

25 diagram and then explain from your standpoint why this

3446

is important when it comes to surgical meshes? 1

2 You see in this image a cross-section of the

3 sutures, two sutures are coming directly to you, and

there is a cross-section. So the circle in the middle,

5 that should be the suture --

6 Dr. Klinge, would that be like if we're

7 looking at the end of the mesh and we're looking at the

8 fibers coming right at it?

Yeah. Or when you cut it. When you cut it 9

10 through, then you will see it like this.

> Q Okay. Go ahead.

12 And every filament is surrounded by this

13 inflammatory infiltrate and by this fibrotic capsule.

14 And if these are -- if you have a large distance

15 between these two filaments, then the space in between

16 can be filled by fat tissue or what is there in this

17 area by the normal physiological tissue. But if these

18 filaments are going close together, then there will be

19 some distance where all this together, the two

20 splinters, will be integrated into one wound altogether

21 will be circulated by scar tissue and even the space in

22 between will be filled by scar.

And is that space filled between, is that

24 what the jury has heard about bridging fibrosis?

25 Α The space in between the filaments, that is the

23

	3447		3449
1	pore. And if this is filled by scar tissue, this is	1	stiff, like leather.
2	what we would call or we call that is the bridging	2	Q Next slide, please.
3	fibrosis.	3	At the end of this June 2006 expert meeting
4	Q And, again, when you were talking about if	4	in Norderstedt, where Ethicon was looking at the
5	the fibers are far enough apart, it just has the scar	5	problems with Gynemesh PS and looking to replace it,
6	or the granuloma around each one, what is that distance	6	what were these what does this section, "Unmet
7	that there has to be, based upon your 20 years of work,	7	clinical needs," tell you, Dr. Klinge? Is that
8	when it comes to these pores?	8	significant to your opinions?
9	A For polypropylene, at least it has to be	9	A There it was the definition of the major
10	1 millimeter to avoid this filling of the pore by scar	10	problems. And if you remember the e-mails from 2003
11	tissue. If you don't want to have it, you have to take	11	and 2004, they mainly take up the message again. So,
12	care that the filaments are that the distance	12	in the center, what has to be done was to design
13	between the filaments is more even far more than	13	material with no shrinkage, fibrosis reduction and
14	this 1 filament.	14	severe contraction. And this was the highest priority.
15	Q And I know you said before that your work	15	So it was very clear what should have been done. And
16	from 2000 on with Ethicon, they were aware of this	16	this was expressed in this table in 2006.
17	1 millimeter requirement. Correct?	17	Q Let's go to the next slide, please, Uri.
18	A This is correct. This has been published, and	18	2007, a year later. Another expert meeting
19	Prof. Klosterhalfen just refers he's yeah. He	19	in Norderstedt. Correct?
20	repeated these results of these years where we studied	20	A It is correct, yes.
21	it.	21	Q Many of the same participants. Correct?
22	Q He repeats it at this expert meeting where	22	MR. GAGE: Objection, Your Honor.
23	they're trying to look at the problems with Gynemesh	23	BY MR. ANDERSON:
24	PS?	24	Q Does this have many of the same
25	A Yes.	25	participants

It's a problem. They were told THE COURT: But they can't first of all, we're not into a punitive phase where we're talking about that they continued to do something they knew was wrong. Second, other than that, what does this
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q So the jury has heard small pore, large pore, they've heard words like macroporous, microporous. Forgetting the words for a moment, what's the important thing for this jury to know in terms of whether or not a pore will be large enough to prevent fibrotic bridging, scar plate, shrinkage and complications for a patient? What is that distance? A The main message is it is critical, the pore size is critical for the outcome, and it should be at least, as you stated, 1 to 2 millimeters. Q This will allow this fatty tissue to grow in? A And then you have a flexible mesh heading off these scar plate that, when it's contracted, it's coming it's becoming stiff and like leather, so you don't want to have this. Q And you have felt explanted mesh and what it feels like to have this scar wrapped around the fiber that has to be taken out of a patient. You've felt that. Correct? A Yeah. We have collected in our department,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	THE COURT: There's an objection. MR. ANDERSON: Oh. (The following occurred at sidebar:) MR. GAGE: This meeting comes six or seven or eight months after Linda Gross's surgery. So in terms of this particular expert and in terms of what the company was discussing, et cetera, it's post-dating the surgery, and we would object to it on that basis. MR. ANDERSON: This is the scientific development, or lack thereof, of making any changes to the Gynemesh PS despite the fact that they repeated to see problems. It shows a lack of this company doing anything from one year to the next to the next. They continue to sell and market a product that had been told by this expert for years, you can't do this. It's a problem. They were told THE COURT: But they can't first of all, we're not into a punitive phase where we're talking about that they continued to do something they knew was wrong.

many, not all, but many of them are looking very, very

25

MR. MAZIE: It goes to Dr. Hinoul's

I believe the jury has seen it. MR. ANDERSON: This is P0753. I believe it is already in evidence, Mr. Gage. MR. GAGE: Your Honor, just the same objection as I repeated just a second ago. THE COURT: The objection is preserved for the record, Counsel. MR. GAGE: Thank you. THE COURT: You can proceed. MR. ANDERSON: Thank you. BY MR. ANDERSON: Q "Factors related to mesh shrinkage, what do we know? A review of literature and internal studies." "Pore size. Small pore meshes, less than 1 millimeter, lead to fibrotic bridging," which we were discussing with the jury where it scars across these holes. Correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A Yes. Q Next slide, please. On the left, I wanted to bring up a photo that the jury saw last week from your colleague, Dr. Muhl's testing. That's an arm, arm number 3 of a Gynecare Prolift total. Correct? A Yes, that's correct. Q And then what are we seeing on the right there, Dr. Klinge? A On the right you see this mesh in higher magnification, and it is converted into a black/white image. And all these black structures represents the filaments. And you see that there are a lot of different pores, so spaces in between the filaments, here is a larger one, here are a smaller one and here are a lot of very, very small one. So when you implant this into the tissue, then the body reacts with a foreign body reaction, sends the cells and sends the scar tissues around these filaments. So after incorporation and implanting this

studies is, in these very small pores there, there - these are completely filled with scar tissue. And you
 need a huge difference or distance between the
 filaments.

And at this image, you see the structural problem of this mesh, because you see that in almost all of these pores, there are crossing some other filaments and they are bringing the scar formation into the pores. So that means that you have a significant reduction of really large pore areas that are free of scar tissue.

And this is the -- this can -- or this explains very well why would this structure after integration into tissue you have a problem with extended scar formation, because all this area will be integrated into scar tissue, and then you have here pores that are at the limit. If there is something changing through these pores, again, even this area will be surrounded by scar tissue.

Q You mean any changes --

21 A Any changes of these pores will increase the risk22 for scarring reaction.

Q So if minimal stress is placed on the meshand the pores begin to collapse, it's even worse?

25 A Yeah. So in regards to the risk for scar

3456

- 1 formation and shrinkage and all these complications
- 2 there, it maybe would have been better not to have
- 3 these crossing filaments. But it has to be tested,
- 4 because it has a lot of consequences to the
- **5** biomechanical of all these things that has to be
- 6 studied there, but here you see that is the main
- 7 problem in regard to the clinical outcome. These are
- 8 the crossing filaments, the crossing bars or whatever
- 9 you like to name them.
- 10 Q And as we were looking at those11 photographs, the diagrams where you could see the end12 of the fibers with the granulomas around it?
- **13** A Yes.

14

15

16 17

18

19

20

- Q Will there be scarring around each and every fiber of polypropylene throughout this entire piece of mesh?
- 17 A If you are looking with a microscope, you will
- 18 see around every fiber at every area, you will see some
- **19** inflammatory tissue around and some scar formation
- 20 around. And in the smaller pores, you will see that
- 21 they are filled by scar tissue. You will not see
- 22 significantly amount of fat tissue in these pores, and
- 23 that makes it stiff. So that is --
- **24** Q And leads to shrinkage?
- **25** A And shrinkage and other consequences of excessive

- 1 scar formation in soft tissue.
- **2** Q If someone were to come before this jury
- 3 and say that pore size of 75 microns is sufficient in
- 4 order to avoid scarring, in order to avoid scar plates,
- 5 in order to avoid shrinkage, what would you want this
- 6 jury to know, if someone stands before them and says
- 7 75 microns instead of 1,000 microns is safe?
- **8** A I've recognized that there is a discussion in all
- **9** the many documents about these 75 microns. This
- 10 derives from the publication from my friend, Parviz
- 11 Amid who was living in Los Angeles, and he was the
- 12 first in 1997 who thought about pore size and proposed
- 13 a classification of hernia meshes based on pore size.
 - But his focus was the risk for infection,
- **15** because at that time, there were textile structures
- **16** with some pores in comparison to some mesh materials
- without any pores. And we knew that they have anincreased risk for infection. So, therefore, he said
- **19** if you have pores of more than 75 microns, you have a
- 20 lower risk of infection than if you don't have them.
- 21 That was the basic reason for this. 75 microns. The
- 22 size of the filament is around 90, 85.7 microns.
- 23 Q The filament, just one of the polypropylene
- 24 fibers, it's already 95 microns?
- **25** A Every line here has a width of 90 microns. So we

- 1 are talking about pores that are smaller, as every line
- 2 here.
- **Q** Can you find a pore that is 75 microns in
- **4** size even in the knotting?
- **5** A Yes. You have to look -- to measure it and look
- 6 precisely whether it really fits the 75, but from all
- 7 what we know is a pore of 75 microns, this is filled
- 8 not even by scar formation, just but -- by the
- 9 inflammatory infiltrate. And -- but it never will be
- 10 filled by fat tissue. So it is not a good cutoff to
- 11 define a good pore from a bad pore. But, furthermore,
- 12 it is not adequate to say a mesh with one pore size.
- 13 You never have a mesh with one pore size. You see in
- **14** this figure very clear that you have a huge variety.
- 15 You have big pores, you have small pores. And there is
- 16 no mesh without these pores of 75 microns, because you
- 17 have these bindings, you have these knots. So,
- 18 therefore, it is necessary to measure it and the
- 19 variety of all these pores as well. But the cutoff of
- 20 75, it's not predicting the risk of scar formation.
- 21 It's meaningless.
- **Q** Was that a classification in the late '90s
- 23 that was classifying the -- you mentioned for the jury
- 24 the older, heavier weight, small pore meshes?
- **25** A Yes. It was written at that time because we

- 1 started later on to produce these large pore meshes 2 with 3 millimeter and 5. So he didn't have it at that time. 3
- 4 Q So he didn't have the large pore, 5 lightweight meshes in order to look at and determine what the proper pore size was? 6

11

12

13

4

- 7 Yeah. But he even didn't look to the tissue 8 response to the bridging fibrosis. That was not a term 9 he was looking at. He was mainly focused on infection.
 - And with your publications from '98, '99, 2002 forward, was the scientific community then aware of the necessity of greater than 1 millimeter pores in order to prevent this bridging?
- Α 14 There was a permanent discussion that we need a revised classification of this, because as you said, 15 most of the meshes meanwhile have pore size that are 16 17 far beyond, and it was not considered any longer as a 18 critical cutoff.
- 19 And, therefore, we proposed or we changed 20 or we -- no. We give a proposal of the new 21 classification that predicts the risk for this bridging 22 fibrosis later on.
- 23 Q Okay. So if someone were to come in front 24 of this jury and say that 1 millimeter pore size, 25 Klinge's work, 20 years of this information, we don't

- 1 buy the 1 millimeter pore size, let me ask you, in the
- 2 worldwide peer-reviewed literature since this concept
- 3 came out in the late '90s, early 2000s by you and the
- group at Ethicon -- you and the group at Norderstedt
- 5 with Ethicon, have you ever seen anywhere in the
- 6 scientific literature anyone who has refuted or
- disputed or who has been able to state that you were 7
- 8 incorrect with greater than 1 millimeter?
- 9 I never got aware of data that are in
- 10 contradiction to this message. The term "large pore"
- 11 is better than small pores, I think there are numerous
- 12 citations in the literature. It's well accepted. And
- 13 even in the many records from Ethicon I reviewed, I saw
- 14 these terms of large pores is necessary. They are
- 15 adopted in these presentations in these documents. And
- 16 I've never seen a sentence where they say no, it's not.
- 17 And I've never seen, and you can believe me, if it's
- wrong, science will lead to publications that will show 18
- 19 that you made a mistake. So I never saw a -- someone
- 20 who could prove by data or by looking with a microscope
- 21 to the tissue response that this 1 millimeter is not 22 right.
- Q 23 We're going to talk about the testing that
- 24 Dr. Muhl did and that he spoke to this jury about last
- 25 week. I'm going to talk about that in just a couple

- 1 minutes.
- 2 But before we do, based upon the testing
- that you did and the results that he had from that
- test, what percentage of Gynemesh PS would be covered
- in fibrosis or scar tissue? 5
- 6 Α It's almost 75 percent.
- 7 75 percent of this would be covered in scar
- 8 tissue as a result of the pore size?
- 9 If you placed this in the abdominal wall in a
- 10 plane fashion, if you plane it in a three-dimensional
- 11 fashion, by every bending, the pore size will go even
- 12 down. And if you play -- if you apply some sort of
- 13 tension there, you will see a deformation of the pores,
- 14 because the polypropylene itself is not an elastic
- 15 material. It is just -- any elongation is just done by
- 16 deformation by the pores. That means they will become
- 17 smaller, and, therefore, the percentage of bridging
- 18 fibrosis will increase even more. So if you place it
- 19 tension free in the abdominal wall in a plane area,
- 20 75 percent is the correct.
 - I want to talk about even before any
- 22 tension is placed on this mesh, do you have an opinion,
- 23 based upon yours and Dr. Muhl's testing regarding the
- 24 fact that 75 percent of this would be covered by scar
- 25 tissue, do you have an opinion that just that design
 - 3462
- 1 alone would be unsafe in a woman's pelvis permanently?
- 2 As I said, there is a structural problem of this
- 3 design because of these crossing filaments.
- Even before we talk about putting any 4
- 5 stress on the product. Correct?
- 6 Yes. Even before this. If you leave them off,
- 7 if you remove these filaments, the scar formation will
- 8 be less.

- 9 Q Let's talk a little bit.
- 10 Did you have an opportunity -- from your
- 11 review of all the documents and the deposition
- 12 testimony, did you have an opportunity to learn how it
- 13 is that Ethicon was trying to test pore size prior to
- 14 launching Prolift in 2005?
- 15 Α Yes, I did.
- Q 16 Well, wait. Look over to the right of that
- 17 diagram.
- 18 Do you see that?
- Α 19 Yes.
- 20 O And it says pore size in millimeter
- 21 squared, and they list a variety of different pore sizes. 22
- 23 2.3, these -- this listing, what's your
- 24 understanding as to what they were doing there?
- 25 Α So obviously they are looking to some few cells,

- and they are trying to measure the area, the total
 area. That means the total number of white pixels in
 this area. And this means that you have an area -- and
 if you made a -- if you assume that it is a square, you
 can calculate the root out of it, and then you may have
 an estimate of the pore size.
 - But this is not correct, because everyone can see that it is not a square. These are irregular forms of it. So the measurement of the area, the calculation of the area is one thing that has been tried to find out what is the percentage of good pores there. But it's not very precise.
- Other ways has been that with a ruler, you just took out some of these pores and tried to measure the distance.
- **16** Q I need to orient the jury.
- You said that one way that Ethicon was looking at pore size prior to launching Prolift was they were just trying to calculate a square area.
- 20 Correct?

8

9

10

11

12

21 A Yes.

- Q A second way that Ethicon was looking at measuring pores prior to March 2005 was how?
- **24** A That was done just by -- with a ruler, where you
- 25 measure the distance here in between, and then maybe
 - 3464
 - you get a figure of 2 millimeters or so. But this is
- 2 not represented to reflect the percentage of good pores
- 3 in such a mesh structure. It just gives one diameter
- 4 in one pore, so this is not sufficient to get any
- **5** information how good a mesh will perform in the body.
- **6** Q Does the pore have to be 1 millimeter in **7** diameter?
- **8** A To every side. It has to be at least, at least
- 9 1 millimeter to all sides.
- 10 Q So is the manner in which to properly test 11 this to see how many 1 millimeter diameter spheres will 12 fit into any of these holes?
- **13** A That is eventually the procedure that Prof. Muhl
- **14** put to an automatic analysis, yes.
- **15** Q Can I see the next slide, please?
- 16 In discussing this pore size specification,
- 17 it seems like a lot of data up there. But is this
- **18** concept of pore size critical to the Gynemesh PS and
- 19 your opinions?
- 20 MR. GAGE: Your Honor, same objection to
- 21 the showing --
- 22 THE COURT: Your objection is preserved but
- **23** overruled.
- 24 BY MR. ANDERSON:
- **25** Q Before we get into this data, is pore size

- 1 critical in your opinion in order to determine whether
- 2 or not this would safely be implanted in a woman's
- **3** body?
- 4 A Yes, yes.
- **5** Q So we were talking about some information
- 6 that you had with regard to how Ethicon said that they
- 7 were measuring their pores. An e-mail from Scott
- 8 Ciarrocca to Dan Burkley.
- **9** Did you understand Dan Burkley to be the
- **10** person at Ethicon who was in charge of measuring pores
- 11 on Gynemesh PS?
- **12** A Yes, I did.
- 13 Q "Susan Lin informs me that you have" --
- 14 this is Ciarrocca to Burkley.
- 15 "Susan Lin informs me that you have a
- 16 visual technical manual for measuring mesh pore size.
- 17 Is this a documented standard and is it used in
- 18 production or development, or is it just employed to
- **19** compare our mesh to competitors?"
- 20 Did I read that read?
- **21** A Yes.
- 22 Q Let's see what Dan's response is to
- 23 Ciarrocca.
- 24 "That is not exactly correct. I developed
- **25** a procedure for measuring porosity many years ago when
 - 3466
- 1 one of the mesh teams at the time asked me if I could
- 2 measure porosity. I asked them, what do you mean by
- **3** porosity? I didn't get a response from any of the nine
- 4 team members, so I defined my interpretation of
- **5** porosity and how I could measure it, which turned into"
- 6 this number over here. "That represents the amount of
- 7 open space in mesh, which I define as a percentage of
- 8 porosity. It can be measured a number of different
- **9** ways. This procedure won't be appropriate for all
- 10 meshes. There is no written test method or procedure
- 11 for pore size."
- **12** Was that your understanding, that before
- 13 Gynemesh PS was launched, that Ethicon did not have a
- 14 written standard or test method for looking at pore
- **15** size?
- **16** A Yes.
- 17 Q "Pore size could be measured, but I've
- 18 asked members of mesh teams what they want when they
- 19 have a mesh that has different sizes because of
- 20 construction, such as Prolene Soft Mesh."
- 21 And that's what we just were looking at
- 22 with the jury, right, the pores are all different
- 23 sizes. Correct?
- 24 A Yes. This is the third possibility to get a
- **25** figure about porosity.

- 1 Okay. Just one second.
- 2 "Many don't know and a few ask for all the
- 3 different pores in the construction, which is a
- 4 challenge.
- 5 "All examinations have been done for
- 6 research purposes for competitive assessment. None
- 7 have been performed to compare to a specification, nor,
- 8 to my knowledge, has a specification been created."
- 9 And this was being sent in 2009. Correct?
- 10 Α Yeah.
- 11 Q So was it -- is it your opinion that prior
- 12 to Prolift being launched in March of 2005, that
- 13 Ethicon did not have a specification for measuring pore
- 14 size?
- 15 Α Yes, that is correct. This procedure that is
- proposed there is just the relation between white 16
- 17 pixels and black pixels and is not focused on the pore
- 18 size. It is not able to do so.
- 19 This method just tells you the percentage
- 20 of open space. Correct?
- Α Yes. 21
- 22 Q And then the other method that you saw that
- 23 some people at Ethicon were using was just a line to go
- across the pore to say, oh, this is how long I think it 24
- 25 is?

3468

- Α Yep.
- 2 And the other way was to say let's see what
- 3 the area is in the square area in these things that are
- not square. Correct? 4
- 5 Α The letter is what we would call today the
- 6 textile porosity, but it's not accurate as well.
- 7 Would any of these three methods that
- 8 Ethicon seemed to be using prior to March 2005 tell you
- 9 anything about how many 1 millimeter pores you have in
- all directions? 10
- Α 11 No, none.
- 12 Would any of these test methods tell you
- 13 how many greater than 1 millimeter pores are
- 14 distributed throughout the mesh?
- 15 Α No.
- 16 Would any of these test methods tell
- 17 Ethicon what would happen in a woman's pelvic tissue
- for the rest of her life with regard to these pores 18
- 19 with bars between them?
- 20 Α These techniques or these procedures are not
- 21 sufficient to predict this risk.
- So prior to Prolift being launched in March 22
- 23 of 2005, from the documents you've reviewed and these
- 24 different test methods that you've looked at, do you
- have an opinion as to whether they had any idea whether

- they had greater than 1 millimeter pore size in
- Gynemesh PS, and if so, over how much of the product?
- Did they know?
- 4 They knew that it was important, but they didn't
- know what happens in this textile structure in this
- 6 place.
- 7 Because they didn't measure it. Correct?
- 8 Α They didn't know to measure it.
- 9 Next slide, please.
- 10 Another e-mail, this is in June of 2006, a
- 11 year after Prolift is launched, from Bob Rousseau to
- 12 Scott Ciarrocca, "Pore size in microns was not measured
- 13 during the development of Prolene Soft Mesh. The total
- 14 percent area that is open was measured and is
- 15 considered an accurate method. Since the product
- 16 construction results in irregular pore geometries and
- 17 sizes, it is not accurate to report a distinct pore
- 18 size."

21

- 19 Did I read that correctly?
- 20 Α Yes.
 - Q So if someone comes before this jury and
- 22 says we meet the 1 millimeter in all directions pore
- 23 size requirement because we have 2.5-millimeter pores,
- 24 if someone gets in front of this jury and says we have
- 25 2.5-millimeters pores, what you would say?
 - 3470
- 1 Anyone who is coming here and saying we have a
- mesh with one figure of pore size, that is not true,
- 3 because everyone will see or can see that if you look
- to this image of the pores, that you always have a mix.
- 5 You have many variation of these pores.
- 6 So the critical information is, what is the
- 7 area of the good pores in relation to the mesh area?
- 8 And, therefore, it is necessary to measure exactly the
- 9 pore -- every pore.
- 10 And based upon the amount -- based upon the
- 11 information that you have and the testing that was
- 12 done, what percentage of good pores were there in
- 13 Gynemesh PS even before strain was placed?
- 14 Α It was around 7 -- 25 percent.
- 15 Q So 75 percent would be bad pores?
- Α 16 Yes.
 - Q 75 percent would cause fibrotic bridging?
- 18 Α Will cause -- will be bridged by scar tissue,
- 19 yes.

- 20 Q Scar plate?
- 21 Scar plate, shrinkage.
- 22 O Shrinkage?
- 23 Α And so --
- 24 So if someone has a Gynemesh PS implant in
- 25 them in the form of a Prolift and they have retracted

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 27 of 108 PageID #: 113713

- arms of the mesh, is that explained by improper poresize, fibrotic bridging, scar plate and shrinkage?
- 3 A Yes.
- Q If someone has bunching of the mesh that iscausing pain and other problems, and they've been
- **6** implanted with a Gynemesh PS Prolift, is this an
- 7 explanation as to why that would occur?
- 8 MR. GAGE: Objection. I don't believe
- **9** there's a sufficient foundation, Your Honor.
- **10** THE COURT: The objection is overruled.
- 11 I'll allow him to answer from his view as an engineer.
- **12** Proceed.
- **13** BY MR. ANDERSON:
- 14 Q You've seen in the literature and other
- 15 places that sometimes it's called bunching, sometimes
- 16 it's called contraction, sometimes it's called
- **17** shrinkage. Correct?
- **18** A Yes.

1

- 19 Q So if someone had what was described as
- 20 bunching of the mesh that's been implanted with
- 21 Prolift, would that be explained by improper pore size,
- 22 fibrotic bridging, scar plates and mesh shrinkage?
- **23** A Yes. All these problems that are related to
- 24 excessive scar formation are explained by this
- 25 structural disadvantage.

3472

- Q Thank you. Slide 15, please.
- **2** Is this what we were just discussing, that
- 3 effective porosity, after you account for the pores
- 4 that will have 1 millimeter in all directions based
- 5 upon Dr. Muhl's report, that this will only have
- 6 effective or open pores of 26 percent?
- **7** A Yes. Effective porosity, that is the area of the
- **8** good pores, to say it simple.
- **9** Q Dr. Muhl was asked by defense counsel last
- 10 week why it was -- well, strike that.
- 11 Defense counsel asked Dr. Muhl a number of
- 12 questions last week that he couldn't answer because he
- **13** said I'm not a medical doctor, you'll have to ask Dr.
- 14 Klinge. Okay?
- **15** A Thank you.
- **16** Q So I want to ask you some of those
- **17** questions today. Okay?
- **18** A Yes.
- 19 Q I don't think it bears repeating, but
- 20 obviously the reason that you told him to have the
- 21 machine automated to look at Gynemesh PS and to find
- 22 the 1 millimeter pore areas is because of everything
- 23 that we've been discussing this morning regarding the
- 24 critical pore size of 1 millimeter. Correct?
- **25** A Yes. The advantage of his procedure is that it

- 1 can be done automatically. It is a lot of work to do
- 2 it by hand, to look whether these pores are big enough,
- 3 so he proposed an algorithm that a machine can make an
- 4 analysis of all these pores automatically within some
- 5 minutes.
- **6** Q But even though it may be a lot of work,
- 7 prior to March of 2005, Ethicon, Dan Burkley and these
- 8 others, could have measured the pores to see how many
- 9 of them were greater than 1 millimeter in all
- **10** directions, couldn't they?
- **11** A They could.
- 12 Q There was software available as well that
- 13 could have done that for them. Correct?
- **14** A They could have done it. There is no real
- 15 invention in this measurements of Muhl.
- **16** Q What you and Prof. Muhl did in that work
- 17 between 2005 to 2007 was just an automated way to count
- 18 the pores --
- **19** A Yes.
- 20 Q -- and see how many were larger than
- 21 1 millimeter. Right?
- 22 A They applied what we otherwise would have to do
- 23 by hand, that this was done just by a computer program.
 - Q But in the e-mail from Dan Burkley when he
- 25 said some of the team members have asked me to measure
 - 3474
- 1 all the pores but that's a challenge, just because it
- 2 was a challenge didn't mean he couldn't have done it.
- 3 Correct?

- 4 A Yeah. But if he -- when he ask what may be the
- **5** reason, what do you think what is important with pores,
- 6 and none could answer this, I think that is an
- 7 explanation why they didn't go on further.
- ${f Q}$ Let's look at the next slide, please.
- **9** You've seen this from Dr. Muhl's report as
- **10** well?
- **11** A Yes.
- 12 Q Explain at the top, this is Prolift arm,
- 13 and we have different amounts of tension.
- 14 Can you explain to the jury why you chose
- 15 these four different amounts of tension, from zero to
- **16** 1,000?
- 17 A When we decided to apply some tension to these
- 18 textile structures, we have to define what range should
- 19 be applied to these structures. And one critical point
- 20 was that we knew from our previous work that beyond 20
- 21 newton, that means 2 kilogram per centimeter, that the
- 22 tissue is going to rupture. So we are convinced that
- 23 we don't need any textile structure that is stronger
- 24 than the neighboring tissues. So the upper point was
- **25** 20 newton.

1 So the next point was that we wanted to 2 have a certain elongation of the mesh. And we have, 3 according to the studies in the literature, that we 4 should have been or there should have been expected an 5 elongation, if it's placed in the tissue, by about 6 20 percent. This should be comfortable, not to hinder 7 the mobility of the tissue very much. But it's a rough 8 estimate about it. But we wanted to have an elongation 9 of 20 percent. And we have seen that Ethicon, they 10 expected that during the implantation, there was 11 applied some sort of strain to this material to the 12 arms. And we wanted to stay far below. 13

And, therefore, the reason was, and we wanted to have very simple numbers. And, therefore, we decided to place a load of 1 kilogram, 500 gram, 250 gram and to look what happens there to the textile structure to see whether the one is better than the other.

Q So with the first slide that -- the slide before this that we saw, that's where the machine has no force on the Gynemesh PS and it's just calculating how many pores there are that are greater than 1 millimeter in all directions. Correct?

24 Α That is correct.

14

15

16 17

18

19

20

21

22

23

1

2 Α

3

25 Q And that was only pores -- I think

3476

26 percent? 26 percent of the pores.

Then when you applied these various forces,

4 Prof. -- Dr. Muhl did this in his machine, what

5 happened when 1.65 pounds of force was placed on arm 3?

6 If you apply a mechanical load of 500 gram or

7 1.6 pounds, then the good pores disappeared completely.

8 So that means when you place this mesh in an area where

9 this load is applied, at some time, for however, in

10 this moment, the good pores will disappear, and then a

11 complete fibrotic bridging of the entire mesh area will

12 occur.

13 Q And Dr. Muhl was asked by defense counsel, 14 well, why did you use uniaxial testing, pulling it like 15 this?

16 Can you explain to the jury why this was 17 part of this test?

18 Yeah. Because multiaxial is really not possible.

19 But this was not intended to make a simulation of the

20 pelvic floor and of the many different forces. We know

21 that the arms are stressed in a uniaxial way, because

22 it is stretched only from one side. We know that

23 ligaments mainly are stressed in a uniaxial way. So,

24 therefore, we are convinced that to get an impression

25 about the stability of the meshes to withstand some

mechanical stress should be done, first of all, in a 2 uniaxial way.

3 O Is this something that Ethicon could have 4 done before March of 2005 with the Gynemesh PS, and

that is to look at what the pores would look like under

6 some minimal strain?

7 To put strain or a mechanical load to a mesh, it

8 is nothing that couldn't have been done.

9 In your opinion, should Ethicon have looked

10 at the effective porosity, the amount of open pores 11 after 1 millimeter, and should Ethicon have looked at

12 those pores after some minimal amount of strain before

13 selling this to be permanently implanted into a woman's

14 body?

15 Α Yes. Always when you intend to use a mesh in an

16 area where you cannot rule out that it is really

17 tension free, that there occurs some mechanical load,

18 you have to look what happens to the pores in case the

19 stress will appear.

20 Q Was Ethicon aware of a study that you and

21 Prof. Muhl had done in 2007?

22 Next slide, please.

23 MR. GAGE: Same objection, Your Honor, just

24 preserve the record.

25 BY MR. ANDERSON:

3478

1 Before we get to that, did you have an

opportunity to look at the Ethicon documents to see

what they estimated the forces to be that would be

placed on the arms?

5 Α Yes, yes, I've seen it.

6 Q And one of them says 5 pounds of force?

7 Α Yes.

8 Q And the other area was 12 pounds of force?

Α 9 Yes.

10 Q And what were the pounds of force that we 11 just said at 1.65 pounds, what happened to the mesh?

12 1 -- yeah. At a load of 1.6 pounds, the good

13 pores disappeared completely already. So it's far

14 below these values.

15 Q Next slide, please.

16 And is that what's represented here in the

17 Muhl finding, that over here under 3.3 pounds, it turns

18 into that configuration?

19 Yes. And this image clearly shows that the

20 elongation is done by deformation of the pores.

21 And at even half that, which was 500, at

even half of that, 1.65, there was zero effective 22

23 porosity. Correct?

24 Α Yep.

25 Q Nowhere for the body to allow fat tissue

1	ingrowth to make it flexible?	1	importance of looking at pore size after stretch was
2	A No.	2	placed on their meshes?
3	Q Only places where scarring would come into	3	A Yes.
4	the pores and encapsulate this mesh in rigid scar	4	Q And how is this significant to you, this
5	plate. Correct?	5	number 4 that we have called out?
6	A That is correct.	6	A In this document, it is clearly that they
7	Q Leading to shrinkage?	7	recognized and they accepted that the requirements for
8	A Shrinkage.	8	the good mesh, that this came out of the new projects
9	Q Leading to patient complications?	9	which were initiated to find a better material, and the
10	A Yes.	10	requirement was defined as pore size of more than
11	Q Next slide, please.	11	1 millimeter under stretch. And that means that
12	I was asking you before if out of the	12	without stretch, you should estimate or you should
13	documents you reviewed, whether or not Ethicon was	13	go to a pore size of more than 3 millimeters. That has
14	aware of this testing and this article that you and	14	been defined as optimum requirement for a better mesh.
15	Muhl had published in 2007. I believe the jury saw	15	Q So no matter what your pore size is that
16	this one the other day.	16	you start out with, if you're going to put sufficient
17	"Interesting article that may give us some	17	strain on it, no matter what that strain is, you need
18	guidance on what we measure on the mesh	18	pore sizes greater than 1 millimeter after that.
19	characterization. Aachen has a very sophisticated	19	Correct?
20	setup but does address the question of what should be	20	A Yes.
21	measured and what is the relevance of the measurement."	21	Q And you need pore sizes greater than
22	Have you seen that document?	22	1 millimeter to keep this scar tissue from growing in.
23	A Yes, I've seen it.	23	Correct?
24	Q The next document please.	24	A Yes. That is their definition of good mesh, and
25	Yeah, it's right there.	25	it is quite clear that the Prolift will fail such a

A On the left side, you see almost exactly that is the test I did with Prof. Muhl. You apply the mechanical load to a textile structures. So this is done this is in total agreement to our understanding what is important, that you need these pores, that you have to guarantee that even under mechanical load you have these good pores. And they did it. Q They did it three years after the product was launched? A Yes. But this means that there is no contradiction in the content of this, what we have studied for 20 years. So these are not data that are

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 30 of 108 PageID #: 1137

1 Do you have an opinion as to whether or not It demonstrates that there is a concern that the 2 Ethicon should have done this for Gynemesh PS prior to arms will not -- even at that time point, will not 3 putting it on the market in 2005? 3 preserve its structure when it's placed into the human 4 4 Definitely. It was quite clear that you need body. large pores at that time point. And, therefore, you 5 And if we have curling and roping and pore 5 6 have to measure it. deformation of -- strike that. 7 7 Q You mentioned before when talking about the If there is curling and roping and pore 8 various forces and why you chose the forces in the 8 deformation in the arms going through a woman's groin 9 uniaxial fashion, first of all, that would be force in 9 and through her buttocks, do you have an opinion as to 10 a uniaxial fashion on one of Ethicon's meshes. 10 what will occur after she goes home from surgery and Correct? 11 for the rest of her life with this mesh in her? 11 Α 12 Yes. 12 If you have these curling and shrinkage, there is 13 Q And when you said you chose something less 13 no chance for any place in the arms to be filled by fat than 2 milligrams of force because you said most 14 tissue, but this will incorporate it into scar tissue 14 tissues will rupture above 2 kilograms of force. 15 completely. 15 16 16 Correct? Is that dangerous for the patient? 17 Α That is correct. 17 Α That is a safe concern -- a safety concern. 18 18 You guys used half of that, which is what's Let's see the next slide, please. Dr. Klinge, you've seen the implantation 19 represented in the middle picture up there. Correct? 19 videos, the training videos by Ethicon. Correct? 20 MR. GAGE: Objection, Your Honor. Leading 20 Yes, I have seen it. 21 21 questions. 22 MR. ANDERSON: I'll withdraw it. 22 Can you play this short clip? 23 BY MR. ANDERSON: 23 MR. GAGE: Objection, Your Honor. Can we 24 Is that in the middle half of the top 24 approach? 25 amount of what you used in the other testing? 25 3486 3484 Α 1 Yes. 1 (The following occurred at sidebar:) 2 Q And they used double -- strike that. 2 MR. GAGE: I'm assuming they're going to 3 Did they use double that amount in the 3 show the arms and show the roping and curling. This is bottom drawing? exactly the testimony that we went through with Dr. 4 Yes. But I think it will depend from the 5 Α 5 Weber, and it's cumulative between the experts, and I indication which load has to be applied there. So I would ask that it not be done. 6 6 think we are in a good range there. 7 7 MR. ANDERSON: This is the top biomaterial 8 Q Next slide, please. 8 scientist in the world that worked with them. He has 9 Show the jury an e-mail that they saw a 9 now gone through and described that Muhl has --10 couple weeks ago, maybe even on Friday. 11/23/05. 10 THE COURT: I'm going to deal with it This is an Axel Arnaud e-mail regarding information 11 11 briefly. 12 that was being given by a Prolift surgeon, Dr. 12 How much longer are you going to be? 13 Eberhard. 13 MR. ANDERSON: Five minutes, ten minutes. 14 And this is eight months after Prolift was 14 THE COURT: Because their lunch is here. launched. Correct? 15 So do the rest and then we'll break. 15 Α MR. ANDERSON: Thanks. Yes, that is correct. 16 16 17 Number 5, he, Dr. Eberhard, is reporting to 17 Axel Arnaud, "He believes that after retrieval of the 18 (The sidebar ended.) 18 19 cannula, the straps take a rope-like shape which is not 19 optimal in his opinion. He has observed that some 20 BY MR. ANDERSON: 20 patients have discomfort as they can feel the straps 21 Q I'm sorry to have to show this again. And with Prolift." It says, "The Perigee implants lie 22 22 we're just going to show a brief clip to demonstrate flat." 23 what we've been talking about here. Okay? 23

24 Why is this significant to your opinions, 25 if at all, Doctor?

24 Α Yep.

1 Do you see the arms over on the right 1 Should they have tested that? 2 2 MR. GAGE: Objection, leading, Your Honor. coming out of the woman's groin, Dr. Klinge? Α 3 Yes. 3 THE COURT: The objection is overruled. Q 4 4 And do you see the ones on the left coming You can answer. 5 out? 5 MR. ANDERSON: Thank you. 6 Α Yes. 6 7 Q 7 Explain what you are seeing here in terms 8 of what we've been discussing, curling and roping and 8 9 9 these problems that could occur as a result. 10 Yeah. You see in this video that the arms get 10 11 BY MR. ANDERSON: 11 curled, that they are -- the appearance is a rope 12 there. 12 13 Q And as that rope comes through the tissue, 13 would you expect that these polypropylene arms here 14 14 will just magically spring back out flat like this? 15 15 MR. GAGE: Objection, leading. 16 16 17 BY MR. ANDERSON: 17 18 Would you expect from this diagram right 18 19 here as those arms are laying in the woman's groin and 19 20 20 curled, would you expect those to pop back into shape? Α No, no, no. Certainly not. 21 21 22 Q Explain that to the jury, please. 22 stated by Ethicon? 23 Α Certainly not. The power of these small 5-0 23 polypropylene fibers to spring back into original form 24 24 is quite low. So if you place this in this rope form 25 where you place it. 25 3488 in the tissue where all the tissue around is going to 1 Q 1 this one, there is no sufficient force to say, okay, I 2 2 part? 3 push the cells back again and then I'm coming to a 3 Α 4 plane -- to a plane shape again. So it is not 4 Yes. O 5 reasonable, for my experience not. 5 6 If you believe in this, you should try to 6 7 test it and to study it. But I have serious doubts 7 8 that it will not be possible if you have a rope mesh, 8 9 then it spring off again. That would mean in the field of abdominal wall hernia, if you place a hernia mesh 10 10 11 11 there in a -- yeah, a wrinkled form, that the surgeon Do you see that? 12 should not concern any longer because it's springing up 12 Α Yes. again and it's lying flat. No, it's not like this. So 13 Q 13 14 if it is placed in this configuration in tissue, it 14 will stay there. That is my opinion to this. 15 15 16 16 From all the documents that you reviewed, 17 did you see anywhere where Ethicon tested what would 17 Α Yes. 18 Q occur due to this roping prior to launching the Prolift What is that opinion? 18 19 in March 2005 for this product to be permanently 19 20 implanted into woman? Did you see that anywhere? 20 Α 21 21 I didn't -- no, no. 22 In your opinion, should Ethicon have tested 22 23 to see what would happen to the arms after it was 23

THE WITNESS: If the arms are looking like this, it is necessary to look what happens in the tissue with these arms. Because -- or you should develop another textile structure so that the arms look different than this one. But you have to do something. Do you have an opinion, Dr. Klinge, if what the jury is seeing with this roping in the arms is similar to the roping that you and Dr. Muhl saw when you did your testing on the mesh? Yes. It's quite similar appearance. And you don't need even a microscope. Everyone can -- if you take the arms and put some mechanical strain to it, you will see this deformation of the pores, so --At the strain of either 5 pounds of force or 12 pounds of force or some greater force as was This happens by comparatively low forces. And this has to be studied in relation to the indication 3490 Last slide, please. Can you highlight that You've seen this document. Correct? "Jennifer, I'll just weigh in on this specifically designed synthetic mesh. This mesh was not specifically designed for Prolift application. We pulled it out of our existing bag of tricks. So a statement that it's specifically designed is unsupportable from a design history standpoint." Dr. Klinge, do you have an opinion as to whether or not it is sufficient to take a hernia mesh that's been adapted for hernia use and to sell it for pelvic floor use without proper testing? I think that it is not sufficient. And I thought we made it clear by all our experiments that you have to make -- find a specific design for the specific indication in a specific area, and, therefore, you have to define the requirements specifically for this 24 purpose. And it is not suitable or adequate to just 25 put from one area in the body a textile and place it in

24

25

curled and roped like this and going all the way

through a woman's groin and through her buttocks?

2	another.	1	A Good afternoon.
_	Q Three more questions.	2	Q Good. My name is William Gage. I'm a
3	Based upon all of your work for 20 years,	3	lawyer and I represent Ethicon. And you and I have not
4	your work in the industry, all of your publications and	4	had the pleasure to meet, so welcome to the United
5	your career in looking at surgical issues related to	5	States.
6	surgical meshes, biomaterials science, tissue response,	6	A Thank you very much. It's a pleasure.
7	histopathology and your work in this field for 20	7	Q Now, sir, you've been paid about \$100,000
8	years, as well as your review of all of the materials	8	for this case. Correct?
9	you saw in this case related to the depositions and the	9	A Yes.
10	internal documents by Ethicon, do you have an opinion	10	Q And when I did the conversion this morning,
11	as to whether or not Gynemesh PS in the Prolift is a	11	I went to the website and said how much is that equal
12	defective product?	12	to in Euros, and I think it's about 1.36 Euros.
13	A Yes.	13	Does that sound about right to you?
14	Q And what is that?	14	A Yes. It changes.
15	A It was a defective product.	15	Q It changes daily, but if we had 100,000
16	Q Do you have an opinion as to whether or not	16	if you got 100,000 bucks, and that's basically for the
17	the Prolift/Gynemesh PS was unreasonably dangerous when	17	work that you did in 2012. Right? I mean, most of
18	it was sold in March of 2005 to be permanently	18	your work was in the year 2012 on this case?
19	implanted into women?	19	A From my feeling, there has been a lot of work
20	A Yes.	20	this year as well, but
21	Q And what's that opinion?	21	Q Let's stick mostly
22	A It was dangerous.	22	A It's for the entire time period here.
23	Q Do you have an opinion as to whether or not	23	Q Let's stick with 2012.
24	Ethicon should have ever sold Prolift with this	24	If we got an exchange rate of about 1.36 or
25	Gynemesh PS in it in March of 2005?	25	something like that, 100,000 US dollars is about
	3492		3494
1	A Yes.	1	136,000 Euros. Correct?
2	Q And what's that opinion?	2	A Yes.
	A They should never have sold it.	3	Q And you were kind enough to tell us at your
3		_	
4	MR. ANDERSON: No further questions at this	4	deposition that you're actually employed by the
4 5	MR. ANDERSON: No further questions at this time, Your Honor.	5	deposition that you're actually employed by the University of Aachen; is that right?
4 5 6	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch.	5 6	deposition that you're actually employed by the University of Aachen; is that right? A That is right.
4 5 6 7	MR. ANDERSON: No further questions at this time, Your Honor.	5 6 7	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind
4 5 6 7 8	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00.	5 6 7 8	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary
4 5 6 7 8 9	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch.	5 6 7 8 9	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year?
4 5 6 7 8 9	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.)	5 6 7 8 9	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year.
4 5 6 7 8 9 10	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.) (A recess was taken from 12:28 p.m. to	5 6 7 8 9 10	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year. And the income of my family there, in 2010, for techs,
4 5 6 7 8 9 10 11	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.)	5 6 7 8 9 10 11 12	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year. And the income of my family there, in 2010, for techs, was in about 160,000 Euros.
4 5 6 7 8 9 10 11 12 13	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.) (A recess was taken from 12:28 p.m. to 1:12 p.m.)	5 6 7 8 9 10 11 12 13	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year. And the income of my family there, in 2010, for techs, was in about 160,000 Euros. Q So the work for the University is somewhere
4 5 6 7 8 9 10 11 12 13 14	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.) (A recess was taken from 12:28 p.m. to 1:12 p.m.) THE COURT: You can be seated. Bring the	5 6 7 8 9 10 11 12 13 14	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year. And the income of my family there, in 2010, for techs, was in about 160,000 Euros. Q So the work for the University is somewhere around 90,000 Euros?
4 5 6 7 8 9 10 11 12 13 14 15	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. And the income of my family there, in 2010, for techs, was in about 160,000 Euros. Q So the work for the University is somewhere around 90,000 Euros? A Yes. Q So the money that you would have gotten paid on this case would be one-and-a-third what you would get paid in a given year for your salary at the university. Right? A I think you calculate it correctly. Q Now, sir, just to make sure we got
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.) (A recess was taken from 12:28 p.m. to 1:12 p.m.) THE COURT: You can be seated. Bring the jury in. The witness can resume the stand. (The jury enters the courtroom.) THE COURT: You may proceed.	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year. And the income of my family there, in 2010, for techs, was in about 160,000 Euros. Q So the work for the University is somewhere around 90,000 Euros? A Yes. Q So the money that you would have gotten paid on this case would be one-and-a-third what you would get paid in a given year for your salary at the university. Right? A I think you calculate it correctly.
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	MR. ANDERSON: No further questions at this time, Your Honor. THE COURT: Okay. We'll break for lunch. We'll just take a half hour and we'll be back at 1:00. (The jury leaves the courtroom.) (A recess was taken from 12:28 p.m. to 1:12 p.m.) THE COURT: You can be seated. Bring the jury in. The witness can resume the stand. (The jury enters the courtroom.) THE COURT: You may proceed. MR. GAGE: Thank you, Your Honor.	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	deposition that you're actually employed by the University of Aachen; is that right? A That is right. Q I think you told us that you were kind enough to tell us at your deposition that your salary there is about 80,000 Euros a year? A The salary is maybe more to 90,000 Euros a year. And the income of my family there, in 2010, for techs, was in about 160,000 Euros. Q So the work for the University is somewhere around 90,000 Euros? A Yes. Q So the money that you would have gotten paid on this case would be one-and-a-third what you would get paid in a given year for your salary at the university. Right? A I think you calculate it correctly. Q Now, sir, just to make sure we got everything clear, you've never treated Ms. Gross.

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 33 of 108 PageID #: 113719

- 1 Α That is correct. 2 Q 3
 - And you've certainly not rendered any
 - medical diagnosis specific to Ms. Gross. Correct?
 - Α 4 That is correct.
- 5 And you've not examined -- you know, you
- 6 testified and you've talked about explants of mesh that
- 7 you've examined. Correct?
- 8 Α Yes.
- 9 Q And that's where mesh is taken out of
- 10 somebody's body and you look at it, for example, under
- a microscope. Correct? 11
- 12 Α That is correct.
- 13 Q And you've not examined any mesh explanted
- 14 from Ms. Gross. Correct?
- Α That is correct. 15
- And you have not examined any mesh that may 16 Q
- 17 still be inside Ms. Gross. Correct?
- Α 18 That is correct.
- 19 Q Now, sir, in your expert report, you were
- 20 kind enough to tell us that you've never performed
- surgery for repair of stress urinary incontinence. 21
- 22 Correct?
- 23 Α That is correct.
- 24 That's surgery in the pelvic floor, in the
- 25 vagina. Correct?

3496

- Α 1 You can say so.
- 2 And you've never performed surgery for the
- 3 repair of pelvic organ prolapse. Correct?
- That is correct. 4
- 5 O And that means you've never performed, for
- 6 example, a native tissue repair, a colporrhaphy.
- 7 Correct?
- 8 Α That is correct.
- 9 And you certainly never performed a pelvic
- 10 organ prolapse repair using a mesh. Correct?
- Α 11 That is correct.
- 12 Q And obviously you've never used a Prolift.
- Correct? 13
- 14 Α That is correct.
- You've never used Gynemesh PS for a pelvic 15
- floor repair of any kind. Correct? 16
- 17 Α That is correct.
- Q And you've never placed a mesh with 18
- 19 trocars. Correct?
- Α 20 That is correct.
- 21 And you've never placed a mesh with
- 22 cannulas. Correct?
- Α 23 That is correct.
- 24 And you've never placed a mesh using the
- same tools as Prolift. Correct? 25

- That is correct. 1 Α
- 2 Q And, sir, you don't consider yourself an
- expert in the pelvic floor based upon the training you
- received in medical school. Correct?
- I'm not an expert in pelvic floor surgery in 5
- regards to the surgical procedure. 6
- 7 And I think you told us earlier, you're not
- 8 an obstetrician or a gynecologist or a urologist or a
- 9 urogynecologist. Correct?
- 10 Α Yes.

- Q You obviously completed no fellowships or
- 12 residency or any other form of formal training in those
- fields. Correct? 13
- 14 Α That is correct.
- 15 You've not studied the pelvic floor forces
- in a human. Correct? 16
- 17 Α That is correct.
- 18 Sir, you stopped doing surgery. You told
- 19 us that you had done hernia surgery, is that right,
- 20 sir, for a period of time?
- Α 21 Can you say it again?
- 22 Q Yes.
- 23 You told us earlier that you did hernia
- surgery for a period of time. Correct? 24
- 25 Α That is correct.

- 3498
- If I remember correctly, it's somewhere 1
- from around, what, the '90s up through about 2004,
- 2005? 3
- 4 I started hernia surgery with the beginning of
- the residence. And this was in 1985. And stopped
- 2006. 6
- 7 O 2006.
- 8 Α In December.
- 9 So you hadn't been doing any hernia surgery
- since 2006. Correct? 10
- Α Yeah. 11
- 12 Q Now, sir, I want to talk to you a minute
- 13 about polypropylene.
- 14 Polypropylene is what Prolift and Gynemesh
- PS are made of. Correct? 15
- Α 16 That is correct.
- 17 Sir, you talked -- at the beginning of your
- 18 direct examination, you talked about, you made a
- 19 reference to the phrase "the history of hernia
- 20 surgery." And I believe you said that you had been
- 21 asked to lecture on the history of hernia surgery.
- Do you recall mentioning that earlier this 22
- 23 mornina?
- 24 I represent the history of mesh research of 20
- 25 years. So that was what I wanted to express.

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 34 of 108 PageID #: 113720

- 1 Q And that's a subject, the history of hernia
 2 surgery and use of meshes in hernia surgery is a
 3 subject that you are familiar with?
 4 A Yes.
- Q Sir, I'm going to hand you an article, I'm
 sure you've probably seen it before, "Historical
 Development of Prosthetics in Hernia Surgery." And
- ${\bf 8}$ $\,$ this is published in the Surgical Clinics of North
- 9 America. Correct?
- **10** A That is correct.
- 11 Q Jamey, let's put up DLTB00647.
- So we've got an article here, groin hernia surgery. And, Jamey, if you go down to the very
- 14 bottom, you'll see that this is 1998. Correct, sir?
- **15** A That is correct.
- 16 Q And the title of it is, "The Historical
- 17 Development of Prosthetics in Hernia Surgery."18 And, sir, when we talk about prosthetics,
- 19 we're talking about things like mesh. Correct?
- **20** A Yes.
- 21 Q Let's go over to .7, LT647.7. And let's
- 22 get this paragraph, "Polypropylene Mesh," kind of front
- 23 and center for us, Jamey. Thank you.
- 24 All right. So, sir, we see here --
- 25 actually, sir -- and, Jamey, you don't have to put this

3500

- 1 onto the screen, but, sir, you have got a copy of the
- 2 article there. And you can flip through it if you
- 3 wish.
- **4** But polypropylene mesh for use in the
- 5 hernia space was not the first time a mesh was used in
- 6 the hernia space. Correct?
- **7** A Please say it again?
- 8 Q Yes.
- **9** I mean, polypropylene mesh was not the
- **10** first type of mesh used by physicians to cure hernias
- 11 in surgical operations. Correct?
- **12** A That is correct.
- 13 Q In fact, doctors, really around the turn of
- **14** the 19th century, looked at a variety of different
- 15 substances and materials to repair hernias. Correct?
- **16** A That is correct.
- 17 Q They used things like stainless steel?
- **18** A Yes.
- 19 Q They tried to make meshes out of steel?
- **20** A Yes.
- 21 Q Fortisan?
- **22** A Steel is used in the sort of clinic as the
- 23 major -- as the best suture material they found. So
- 24 since 1944, they still used for this purpose sutures
- 25 made of stainless steel and still are thinking that

- 1 this is the best. So there are different opinions
- 2 about it and experiences, and it depends from the
- 3 purpose of where you want to use it.
- 4 Q I mean, there are a lot of different
- 5 opinions about what's being used. Right?
- 6 A Yeah.
- **7** Q Okay. So then we --
- **8** A It depends.
- 10 considered as a material for use in the hernia space.
- 11 Right? You're familiar with that?
- 12 A Polyvinyl?
- 13 Q It's not on that particular page, sir. I'm
- 14 just telling you -- here. I said you could look back
- 15 in the article earlier. And you'll see that polyvinyl
- 16 sponge was once used as a potential material in the
- 17 repair of hernia surgeries.
 - Were you aware of that?
- **19** A I have to look through that. If you tell me
- 20 where I can find it?
- **21** Q Look at 647.3.
- **22** A 647.3. Yeah.
- 23 Q Do you see that heading "Polyvinyl Sponge"?
- 24 A I know this, yes.
- **25** Q If you flip over on the next page, sir, you

3502

- **1** see where nylon -- you're familiar with nylon.
- 2 Correct?

- **3** A I know it, yeah.
- **4** Q And nylon was another substance that
- 5 physicians and surgeons looked at as a possible way to
- 6 repair hernias in people. Correct?
- 7 A Yes.
- 8 Q And then we have another substance called
- 9 Silastic. Correct?
- **10** A Yes.
- 11 Q And that's a silicone-type product.
- **12** Correct?
- **13** A Yes.
- 14 Q And then Teflon, you see that on the next
- 15 page, that's another substance. You were aware of
- **16** that?
- **17** A Yes.
- 18 Q And then carbon fiber, that was another
- 19 substance that surgeons started looking at and saying,
- 20 you know, what can we use. That was another one.
- 21 You're aware of that. Correct?
- **22** A Yes.
- 23 Q And then we've got polyester, over on the
- 24 next page, that was another substance that surgeons
- 25 were looking for as a solution to the hernia space.

	Case 2:12-md-02327 Document 2960-8 File	ed 10	0/12/16 Page 35 of 108 PageID #: 113721
1	Correct?	1	surgeons throughout the United States that 20 percent
2	A Yes.	2	were using it for complicated hernia repair. In 1963,
3	Q And then we get to what we see on the page,	3	an improved version of Marlex was introduced by Usher
4	after going through all that, on page 647.7, are you	4	based on a new knitted mesh of polypropylene
5	with me, sir?	5	monofilament fiber, used initially as a suture
6	A 647.7?	6	material, and this remains the prosthesis in use today,
7	Q Yes. It's what's up on the screen.	7	marketed by CR Bard of Billerica, Massachusetts as
8	A Uh-huh.	8	Marlex mesh."
9	Q Do you see that?	9	Did I read that right?
10	A Yes.	10	A Yes.
11	Q It says, "Polypropylene mesh." And let's	11	Q So now it's 1963 and we've got a knitted
12		1	_
	just do the first couple sentences there.	12 13	mesh of polypropylene monofilament fibers. Correct? A That is correct.
13	All right. And what we see, "Usher," he		
14	was one of the early pioneering surgeons; is that	14	Q And if we talk about Prolift or we talk
15	correct, sir?	15	about Gynemesh PS, which is the mesh that goes into
16	A Yes.	16	Prolift, we're talking about a polypropylene
17	Q "Usher introduced a new polyethylene	17	monofilament fiber. Correct?
18	plastic mesh called Marlex 50 in a series of	18	A Yes.
19	experimental and early clinical papers in 1958 and	19	Q Now, let's go down here. "In 1967."
20	1959. This plastic mesh material had many obvious	20	Right.
21	advantages over any type of metal mesh in use at the	21	So we see here, in the article is
22	time."	22	telling us that, "In 1967, Collier and Griswald
23	Do you see that?	23	described the routine use of polypropylene mesh in
24	A Yes, I see it.	24	inguinal hernia repairs and reported 212 consecutive
25	Q And polyethylene is not exactly the same	25	repairs without a failure and without an infection."
	3504		3506
1	thing as polypropylene. Correct?	1	Correct? Did I read that right?
2	A That is correct, definitely.	2	A You read it right.
3	Q Let's go over to the next page, LT647.8.	3	Q Now, let's go to 647.10. First few
4	And let's go down to the paragraph right here beginning	4	sentences of that paragraph, Jamey.
5	"In 1962."	5	"The expansion of laparoscopic surgery,"
6	Okay. So we see here, "In 1962, Usher	6	sir, that's where laparoscopic surgery in the hernia
7	reported a collective review of 541 cases of hernia	7	space is where you don't split somebody wide open in
8	repair with Marlex mesh."	8	order to put a mesh in them. Right?
9	And that's the polyethylene that we just	9	A Right.
10	showed. Correct, sir?	10	Q You go in through the use of
11	A It is correct that you read it. Whether it is	11	A Trocars.
12	correct, I don't know, because sometimes they change to	12	Q trocars?
13	polypropylene. And I didn't know when it was.	13	And you push the mesh down the trocar or
14	Q That's exactly the point we're going to,	14	down the hole, and then you look inside and you're
15	sir.	15	operating inside the abdomen, it's kind of a blind
16	A Yeah.	16	procedure, but you still are able to see. Right?
17	Q Look right here. Let's look right here.	17	A In some procedures, that is right.
18	The let's do this whole paragraph right there,	18	Q So I just wanted the jury to understand
19	beginning with "The use of this."	19	what laparoscopic surgery is. And I think we've
20	"The use of this new polyethylene mesh	20	described it.
21	prosthesis grew rapidly after its introduction, and by	21	"The expansion of laparoscopic surgery
22	1962, Adler"	22	showing an exponential growth as more and different
23	Again, sir, another physician. Correct?	23	procedures are being performed. Hernioplasty is now

Q

24

- Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 36 of 108 PageID #: 1137 1 with mesh. Correct? 1 Q Sir, that's not a journal that you have 2 Α Hernioplasty? 2 ever subscribed to. Correct? Q Yes. 3 3 So far I know until now, not. Α Yes. Q 4 4 I'm sorry, did you say no? 5 Q -- "is now performed laparoscopically with 5 Α No. 6 the major benefits reportedly being minimal patient 6 Q No. All right. 7 discomfort and prompt return to full activities and 7 Have you ever seen this article? Α 8 employment." 8 No. 9 9 Q Did I read that right? Anterior colporrhaphy, you understand what 10 Α You read it right. 10 that is, don't you? Now, let's go down a couple of paragraphs 11 Α Yes. 11 12 to the one beginning "Polypropylene." 12 Q "Anterior colporrhaphy reinforced with 13 Marlex mesh for the treatment of cystoceles." 13 "Polypropylene mesh has had an enormous impact on surgery over the past 35 years, and countless 14 Do you know what a cystocele is, sir? 14 patients have had their lives extended or improved by 15 Α Yes. 15 16 Q its application to numerous surgical problems. It is Jamey, let's get just the first couple of 16 17 quite clearly and justifiably the most popular 17 sentences of the abstract. 18 "This study assesses the use of Marlex mesh 18 prosthetic mesh available today for surgical in conjunction with anterior colporrhaphy for the 19 implantation." 19 20 Did I read that correctly? 20 correction of cystocele with or without urinary stress Α 21 incontinence. A retrospective review was carried out, 21 Yes, you read it correctly. 22 Thank you. Jamey, you can take that down. 22 12 years of experience with 142 patients undergoing a 23 Α Am I allowed to give a comment on this or not? 23 modified anterior colporrhaphy reinforced with Marlex mesh." 24 THE COURT: No. You have to just answer 24 questions that are asked. And if your attorney wants 25 25 Did I read that right, sir? 3508 3510 Α to ask something in follow-up, he can do that. 1 Yes. 1 2 THE WITNESS: Thank you. 2 So let's go back up to the top. Let's look 3 BY MR. GAGF: 3 at the date on that article. Now, Doctor, I'm going to hand you an That's 1998. Correct? 4 4 article, it's Defendant's Exhibit DLTB00170. Α 5 5 That is correct. 6 Sir, are you familiar with this article? 6 So if we've got 12 years experience with No. I have to read it. 142 patients using Marlex, we're looking at, what, 1998 7 Α 7 8 Q Sir, I'm not going to guiz you heavily on 8 minus 12 gets us back to the mid 1980s; is that right? What is the question, 1998 minus 12 years? 9 this article, so if you've just familiarized yourself 9 with it, can we move forward with some questions? 10 Yes. That gets us to what, 1986? 10 Α Α You see, it's difficult. You want to pose some 11 '86 that means. 11 12 questions whether you read it? I don't need to read it 12 So we've got doctors implanting Marlex mesh myself, because I can --13 for anterior colporrhaphy and for the treatment of 13 That's fair enough. 14 cystoceles in the mid 1980s. Correct? According to Α If you say read it correctly, I can answer it. this article? 15 15 Perfect. 16 According to this article, he studied some of
- 14
- 16
- 17 Α If you ask to the content, I have to read the
- entire text. 18
- 19 Q That's fair enough, sir.
- 20 We can see up here it's published in 1998.
- 21 Correct?
- 22 Α That is correct.
- 23 And it's the International Urogynecology
- 24 Journal. Correct?
- Α 25 That is correct.

- 17 these patients, but I didn't see the follow-up, how
- 18 many, how he did it. So we have to go in the details
- 19 to see how reliable these results were that he reported
- them. So I have to read it. 20
- 21 Let's go to page 170.5. Let's go to the
- 22 bottom paragraph where it says, "We believe."
 - And we see, "We believe that the modified
- 24 anterior colporrhaphy reinforced with Marlex mesh is a
- safe procedure which can be performed in a patient with 25

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 37 of 108 PageID #: 113723 1 symptomatic prolapse, even if it is their first go ahead and flip to the page that I'm going to talk to 2 operation." you about. Right there, page 9. 3 Did I read that correctly, sir? 3 Sir, underneath your heading there in your Α 4 You read it correctly. expert report, "Ethicon's development of polypropylene Sir, let's go back to the first page of mesh," you have there, "Ethicon's use of polypropylene 5 6 that article. as a suture material dates back to the late 1960s." 7 7 Go under "Materials and Methods." Just Right? Α 8 highlight that first sentence there. 8 I see it. 9 9 Q We actually -- we've got "January 1977 to When we talk about sutures, I'm from the 10 May 1992, 142 women underwent an extended anterior 10 southern part of the United States and we call them 11 colporrhaphy reinforced with Marlex mesh." stitches. 11 12 So it's actually, instead of '86, it 12 Α I can't comment on it. actually goes back to '97 -- I'm sorry, 1977. Right? 13 13 But sutures, what we call stitches, are polypropylene threads that are used throughout the body 14 You read it correctly, yeah. 14 15 Sir, I'm handing you another article. This 15 to close wounds. Correct? is Defendant's Exhibit DLTB00325. 16 If you say so, yeah. 16 Have you ever seen this article, sir? 17 Well, sir, I mean, I'm asking you. 17 18 Α I don't recall. 18 That's what sutures are used for. Correct? 19 All right. And if we go up there to the 19 Α Please again? Q top, the name of this journal is European Urology. And 20 Yes. 20 its publication date is 2000, but we see that it was 21 21 Sutures are used -- they are polypropylene 22 submitted sometime in 1999. Correct? 22 threads or filaments that are used to close wounds. 23 Α That is correct. 23 Correct? European Urology, that's not a -- that's Α Some wounds. Skin. So you would never suture 24 24 25 bowels with a polypropylene suture. You would never do 25 not a journal you subscribe to, is it, sir? 3512 Α 1 No. so. So you have muscular damages you would treat, 2 Q maybe some skin, but you will never -- some soft And the title is "Tension-free vaginal mesh 3 repair for anterior vaginal wall prolapse." Correct? 3 tissue --That is correct. 4 4 Q Right. 5 And let's scroll up a little bit, Jamey. Α -- you will not use it for this. 5 All right. So under "Objectives," "We 6 6 And that's not -- I'm not trying to suggest that it's used --7 determined the efficacy of the use of a tension-free 7 8 Prolene mesh to correct a grade III anterior vaginal 8 I think --9 wall prolapse recurrence." Correct? 9 -- in every single place. That's not what 10 Α You read it correct. 10 I'm suggesting, sir. Q 11 11 And Prolene mesh was the precursor to I'm saying just simply that polypropylene 12 Prolene Soft Mesh. Correct? 12 has been used as a suture material in certain places in Α 13 13 From the timeline -the body going back at least to the 1960s. Correct? 14 Q Yes. 14 No doubt about it. -- it is I think not correct, because Prolene is 15 And Prolene sutures, I'm reading now from 15 your expert report, Prolene sutures were developed into 16 still sold, so it was a parallel development. 16 17 So I tell you what. Let me go to your 17 a flat hernia mesh in 1975. 18 Α expert report and let's get the history straight before Yep. 18 19 we finish going through this article. 19 Q And they called that Prolene mesh? Α 20 You told us in your expert report that 20 Yep. Ethicon's use of polypropylene as a suture material 21 Right? I mean, I'm just reading this right 21

35 of 106 sheets Page 3511 to 3514 of 3681 02/04/2013 11:51:09 PM

22

23 Α

24

25

out of your report; is that correct?

is on the next page of your report, Ethicon then

So then Ethicon then developed -- and this

Yeah.

22

23 24

25

dates back to the late 1960s. Right?

a look through it?

Q

May I have this expert report, sir, so I can take

Sir, just to make it easier for you, I'll

11

22

- 1 developed Prolene Soft Mesh, which got launched in the
- year 2000. Right? 2
- Α Yes. 3
- Q Okay. And then in 2002, Ethicon sold 4
- Prolene Soft Mesh as Gynemesh PS. Right? 5
- 6 Α Yeah.
- 7 Q And then it was in '05 when Ethicon used
- 8 the Gynemesh PS to go into the Prolift. Correct?
- Α 9 That's correct.
- 10 So when we talk about Prolene mesh, and we
- talk about an article in 2000, right, we're talking 11
- 12 about the Prolene mesh that Ethicon developed into a
- flat hernia mesh in 1975. Right? 13
- Α Please again? 14
- 15 Q Yes.
- We got an article here, 2000. Correct? 16
- 17 Α Yes.
- And this Prolene mesh right here, this is Q 18
- not Gynemesh PS, is it? 19
- Α Obviously not. 20
- Obviously not, because Gynemesh PS doesn't 21
- 22 come out until 2002. Correct?
- Α 23 Yes.
- 24 Q So this is what has sometimes been referred
- to as the heavier weight --25

3516

- Α 1 Yes.
- 2 Q -- Prolene mesh. Correct?
- Yes. 3 Α
- Q 4 And the pores on the Prolene mesh are a lot
- 5 smaller than the pores on the Gynemesh PS. Correct?
- Α 6 Yes.
- 7 Q A good bit smaller. Correct?
- 8 Α Yes.
- 9 And if we put them under your effective
- porosity testing, they would very likely fail the 10
- effective porosity testing. Correct? 11
- 12 Α Correct.
- 13 Okay. All right. So let's get reoriented.
- 14 Let's go back up to the top of the article. I just
- want to make sure we've got everything squared away. 15
- European Urology, 2000, "Tension-free 16
- 17 vaginal mesh repair for anterior vaginal wall
- prolapse." 18
- 19 All right. Let's now, let's go to the
- abstract. "We determined the efficacy of the use of a 20
- tension-free Prolene mesh," this is the heavyweight 21
- with the really small pores, "to correct a grade III 22
- anterior vaginal wall prolapse recurrence." 23
- 24 Correct? Did I read that right?
- Α You read it right.

- 1 Under "Methods," "12 women (mean age 65.6
- years) with stress urinary incontinence (SUI) four type
- 3 II and one type III and bladder prolapse entered the
- study. After vaginal incision, a pretailored 4
- polypropylene mesh was fixed," and they go into the
- 6 exact technique of how they do it.
- 7 So then we go down to "Results," and we
- see, "All patients were available for postoperative 8
- 9 pelvic examination at three-month intervals for a mean
- 10 follow-up of 20.5 months."
 - So what they are telling us there is, after
- 12 putting the mesh in, the doctors then went in and did a
- 13 pelvic examination of the women. Correct?
- Please, again? 14
- 15 Q Is that right?
- 16 Please, again? I was still busy to read this.
- 17 Quite all right, sir. I'll be glad to
- 18 rephrase it.
- 19 It says that, "All patients were available
- 20 for postoperative pelvic examination at three-month
- intervals for a mean follow-up of 20.5 months." 21
- My question is, that means that the women 23 had pelvic examinations after having the mesh
- 24 implanted. Correct? That's what postoperative means?
- 25 Α That is correct, yes, yes.

3518

- 1 And then we see here, "No significant
- postoperative pain was reported by the patients."
- 3 Correct?
- Α That is correct. 4
- 5 And under the "Conclusion" it says, "This
- study confirms that in patients with moderate cystocele 6
- 7 a tension-free mesh to support a bladder base and neck
- 8 effectively treats the cystocele. It is particularly
- recommended in the treatment of previous failure with
- traditional techniques and when the quality of 10
- 11 suspending tissue is poor or defective"; is that right?
- 12 Did I read that correctly?
- 13 You did. Yeah, you read it correctly.
- 14 Now, sir, you mentioned earlier -- you can
- 15 take that down.
- 16 You mentioned earlier, sir, that I think
- 17 the amount of the mesh --
- 18 Ben, do you have the Prolift?
- 19 I'll ask the jury to remember the Prolift
- 20 mesh.
- 21 THE COURT: You don't have it in the
- 22 courtroom?
 - MR. GAGE: He said he has got it back at
- 24 the war room.
- THE COURT: Both sides refer to their rooms 25

1 as war rooms. Just so you know, it's equal. 1 about, sir. 2 MR. GAGE: Not that we're at war or 2 Sometimes it's 300 meters and sometimes it 3 anything. may be 400 meters. Right? 4 THE COURT: Both plaintiffs and defendants 4 Yes. call it that. We can proceed. 5 Q Now, sir, when we talk about polypropylene, 5 6 If you need the mesh, we can get it. polypropylene mesh is currently the most utilized 7 MR. GAGE: I don't, Judge. It's not that 7 synthetic surgical material. Correct? 8 8 You read it or you stated it? big of a deal. 9 9 THE COURT: All right. Go ahead. Q I'm asking you whether it's a true 10 MR. GAGE: The jury is going to get to see 10 statement, sir. 11 Α a good bit of it, so... I think it is correct. 11 12 BY MR. GAGE: 12 Okay. Well, it was in your expert report. 13 Q Sir, you were talking about the amount of 13 I was going to show it to you, but -the polypropylene mesh in the implant. Α I didn't learn it by heart, so... 14 14 15 Do you remember that? And I think you 15 Maybe we can read it. referenced four football fields? 16 Q As long as you agree to it, sir, I don't 16 17 Α Yeah. 17 need to read it. Q 18 18 Hernia meshes are sometimes -- how big --Polypropylene is favored for most mesh 19 what's the biggest hernia mesh you ever implanted, sir? 19 constructions. Correct? 20 20 Maybe as big as that sheet of paper? Yes. Favored, yeah. It's used for... Α This is Din A4. It is 30 to 20 --21 And polypropylene mesh is the most widely 21 22 Q Maybe even bigger than that? 22 used material for hernia repair. Correct? Α 23 Α Bigger than this. 23 Yes. 24 Bigger than that. All right. 24 Q And polypropylene mesh is the most widely 25 So you've implanted meshes in people's 25 used material for pelvic floor repairs. Correct? 3520 3522 Α abdominal space that are bigger than that sheet of 1 Yes. 1 paper. Correct? 2 And 91 percent of all gynecological meshes 2 3 Α But it's a completely different thing. 3 sold in the United States are polypropylene. Correct? Totally different things? Α Yes. 4 4 Α O 5 Yes. 5 And, sir, you would agree with me that polypropylene is appropriate for use in the pelvic 6 You've got one in the pelvis and one in the 6 7 abdomen. And I'm not trying to suggest they're one and 7 floor if you have the right construction of the 8 the same, sir. I'm just trying to ask you a couple 8 polypropylene. Correct? 9 questions. 9 If you have the right construction, yes. 10 Α 10 And mesh is an important option for Yep. Q You've put that amount of polypropylene patients in pelvic floor repair. Correct? You would 11 11 12 inside human bodies. Correct? 12 agree with that? 13 Α Yes. 13 I can imagine that there are some patients, even 14 Q And if we were to take that mesh and we 14 in the pelvic floor, but I'm not a specialist for were to lay it end on end, it would go a lot longer finding the best indication for a mesh in this area. I 15 15 than four football fields, wouldn't it? know from the abdominal wall that there is -- since 20 16 16 17 No. We have made at that time some calculations, 17 years, we have a lot of discussion, it is changing what and it was -- depending from the mesh you used, it was 18 is the best indication for these meshes, and there are 18 19 only 300 meters. 19 areas where it's not an accepted indication to today. Q 20 20 Only 300 meters? All right. Now, sir, I want to go back for 21 21 300 meters, and -- yeah. So a little bit less. just a few minutes into your background and your

amount of suture material.

O

doesn't make any sense to say how long. It is a huge

And that's what I want to talk to you

22

23 24

2

- 1 then that you had implanted meshes, many of which were
- 2 polypropylene meshes, into something in the
- 3 neighborhood of about 300 patients.
- 4 Does that sound about right?
- 5 Α Yes.
- 6 Q Now, hernia surgeries are one -- I think I
- 7 read it's the most commonly performed surgical
- 8 procedure every year; is that right?
- 9 Α For abdominal surgery, yeah. It's the most often
- 10 performed procedure.
- 11 And in your deposition, I think you told us
- 12 that 20 million meshes are implanted each year for
- 13 hernia repair?
- Α 14 The older figures are -- in US it's about 1
- million, maybe worldwide maybe 2 million, and I was a 15
- little bit surprised. This came from a recent 16
- 17 publication from around Kingsnorth, and there it was
- 18 mentioned 20 million meshes, but they didn't specify
- 19 for what purpose.
- 20 Q So a good portion of those are probably
- 21 polypropylene. Correct?
- 22 Α Yes.
- 23 Q So if we're getting 20 million people a
- 24 year -- and let's just say, what, 10 million of them
- 25 are polypropylene or have polypropylene in it, would
 - 3524
 - 1 that be a fair estimate, or would you say the number is
 - 2 higher than that?
 - 3 I cannot say. There aren't any data about it.
 - 4 But I would rely to the 2 million that are treated with
 - 5 meshes for abdominal wall. And, yeah, maybe there are
 - 6 5 million, 6 million, but...
- With polypropylene? 7
- 8 Α With polypropylene.
- 9 And that's a year, per year. Right?
- 10 Α That is -- would be the present status maybe.
- 11 Q So we're talking about a lot of people
- 12 around the world?
- Α 13 Yes. It's an important problem.
- 14 Q Tens of millions?
- 15 Α Yes.
- 16 Q Potentially hundreds of millions?
- 17 Α I wouldn't go so far.
- 18 Well, if you said 20 million a year --
- 19 Α He said 20 million a year. And I told you that I
- 20 think this is a -- but if you're looking to the
- 21 Chinese, maybe we will get completely other, and India.
- So we are all small countries, even this one. 22
- 23 So long story short is, whether 20 million
- 24 is right or 5 million is right, if you look over --
- 25 Α It doesn't matter.

- 1 Q It doesn't matter.
 - If you look over a 10, 15 or 20-year window
- of time, we're talking about certainly tens of millions
- 4 of people on this planet are walking around with meshes
- in their body, and a large percentage of those meshes 5
- 6 are either polypropylene or they contain polypropylene.
- Correct?
- 8 Α Yes. But you are aware that you mix up a lot of
- 9 different indications, materials and all this.
- 10 Q Correct. And we're going to get to some of
- 11 that.
- 12 Now, one of the reasons that you and many,
- 13 many other surgeons like you have used polypropylene
- 14 meshes and other meshes is because, if you take a
- 15 person who's got a hernia -- and, sir, I have to
- 16 confess, before I got involved in this lawsuit, I was
- 17 not an expert on hernias, but they can be significant
- 18 and they can be serious. Correct?
- 19 It was a complex question. Please, can you make
- 20 it --
- Q 21 Yes.
- 22 Hernias can be --
- 23 Α I have to translate it.
- 24 Q Hernias can be a serious condition.
- 25 Correct?

- Α 1 Yes.
 - 2 Q And surgeons sometimes try -- essentially
 - it's an organ, maybe a piece of the abdomen, perhaps,
- that pushes through the abdominal wall?
- Α Yes. 5
- 6 And you need to be able to put that organ
- back so that the person doesn't have a more serious 7
- 8 condition, such as the abdominal wall cutting off the
- 9 blood flow to that particular organ. Correct?
- 10 Α That can happen, yes.
- 11 Q And that can kill you. Correct?
- 12 Α That can kill you, yes.
- 13 So one option the surgeons have, and at
- 14 least in the hernia space, is to just simply use
- 15 sutures, like we were talking about, stitches where I
- 16 come from, where you stitch up, you open up the abdomen
- 17 and you push the organs back in and then you can stitch
- it up. Correct? 18
- 19 Α Yes.
- 20 Q And then another option is the use of a
- 21 mesh. Correct?
- Α That is correct. 22
- 23 And one of the reasons that surgeons use
- 24 the meshes in the hernia space is because of
- 25 recurrence. Correct?

8

- 1 Α That is one aspect. However, we have -- since 2 I'm in -- working in this field of abdominal wall 3 hernia, every year we have several conferences with 4 lots of discussions about when to do, what to do. And 5 so... 6 Q Right. 7 I think it is too simple to say, there is a 8 hernia and you do it because of the recurrence. This 9 is too short. 10 Q Well, one of the reasons -- well, 11 reinforcement of tissues with mesh implants is 12 definitely the treatment of choice due to reports of 13 low recurrence rates. 14 Do you agree with that? 15 Α Yeah. Q 16 Ease of use. Correct? Ease of use. 17 Correct? Α 18
- 18 A Ease of use? The ease of use, yeah, yeah, yeah.
 19 Q And low morbidity rates. Correct?
 20 MR. ANDERSON: Objection, Your Honor.
 21 May we approach, Your Honor?
 22 THE COURT: Okay.

22 THE COURT: Okay. 23 - - -

1

2

14

15

16

17

18

(The following occurred at sidebar:)

25 MR. ANDERSON: Your Honor, we object. It's

3528

far beyond the scope. One of the things that I know that Mr. Mazie and Mr. Slater told you on Friday was

3 that we were going to try to severely limit the areas

4 of guestioning that we went into. I cut out hours of

5 things, and one of the things that I strictly tried to

6 stay away from was getting into the history of hernia

7 surgery, all of the various things about hernia

8 surgery, the indications, the types of materials,

9 because we could be here three days. And if I come

10 back on redirect, we will, because I have mounds,

11 mounds of hernia stuff that we can get into. And I

12 didn't think we were going to do that. I thought we

12 didn't tillik we were going to do that. I thought w

13 were going to talk about the Prolift.

I realize there is a little bit of crossover, and he's gone through a half hour of the history of that. But now we're getting into, there are parastomal hernia, there are esophageal hernia, there are all kinds of abdominal surgeries. We could go on with this forever.

with this forever.
And I thought that what we were trying to
do is finish this today, if we could, and we never will
like this, because he has gone so far down, and if he
keeps going down this road, Your Honor, I have got to
come back, because there are vast differences between

25 hernia and pelvic organ prolapse. Vast differences.

And it is an enormous load, because as he's already
 said, 50 years on that. Marlex alone we could go into
 forever.
 You saw, Your Honor, that I specifically

5 stayed on Prolift. I didn't talk about Ultrapro, I

6 didn't talk about Marlex, I didn't talk about Prolene.

 ${\bf 7}\quad I$ stayed away from it. But I could easily go there.

9 we will be here for a couple of days. And I have an

And there's plenty of great stuff I could go into, but

10 opportunity, if he's going to keep going down this

11 road, to go down that road. This is a huge area of

12 medicine.

MR. GAGE: Your Honor, I have, I'm guessing
five to seven more minutes based on his own experience,
which happened -- unfortunately, happens to be only in
the hernia space. And then I don't think -- I don't

17 think we're going to be dealing specifically with

18 hernia thereafter. I mean, obviously there's some

19 things that relate to hernias, but that's not --

THE COURT: Well, I'm not going to limit you. I think that it's relevant and it's within the

22 scope of the direct, even though it's a different

23 branch of the direct, but it is in fact relevant to

24 what he's testified to, which is generally whether this

25 material is safe. I know he's indicated it's safe for

It's 25 material is safe. I know he's indicated it's safe for

3528

one thing. Certainly the defense can bring out thathe's used the material, that other people have used the

3530

3 material, that it's been around for a long time.

I personally would love to shorten the case
as much as possible and avoid two days on the stand
with this man, but I don't think that I can
legitimately curtail the defense from going into some

7 legitimately curtail the defense from going into some8 issues, and then you are going to have to make your

9 call of what you need to go into.

10 MR. ANDERSON: Certainly.

11 - - -

12 (The sidebar ended.)

13 - - -

14 BY MR. GAGE:

Q So, Doctor, we were talking about thesurgeries that you were performing in the hernia space.

And I think we established that it was

18 something in the neighborhood of 300 patients.

19 Correct?

17

20 A Yeah.

21 Q And I know, I think from your deposition 22 you indicated that you implanted Marlex mesh, one of 23 the ones we looked at earlier, in some of your

23 the ones we looked at earlier, in some or you

24 patients. Right?

25 A Yes, yes.

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 42 of 108 PageID #: 113728 Q 1 And that's a polypropylene mesh. Correct? 1 Α Any operation carries some, yeah. 2 Α Yes. 2 And you knew that there was a potential Q risk for mesh erosion? 3 And Atrium, that was the name of a mesh --Α Α Yes. Yes. 4 4 Q -- I think you implanted in some patients. 5 Q And, sir, I'm not trying to trick you, I'll 5 6 Is that a polypropylene mesh? tell you I'm coming right out of your expert report on 7 Α 7 this one, page 28. Yes. Q 8 And then Prolene, that's an Ethicon mesh? 8 You remember talking about foreign body Α 9 Yes. reaction and chronic inflammation on your direct exam 9 10 Q And it's made out of polypropylene. 10 earlier this morning? Correct? 11 Α Yes. 11 Α 12 Yes. 12 Q Remember we talked about that? Α Q And you implanted that in some of your 13 Yeah. 13 14 Q patients? Talked about fibrotic bridging, where the 14 Α Yes. 15 scar tissue builds around the pores --15 Q 16 Α And Ultrapro, that's a partially --Yes. 16 17 Α A mixed. 17 Q -- and causes problems for the patient? O It's a mix. 18 Α Yes. 18 19 Q 19 It's got polyglactin and it's also got It's a well-known fact and all the studies polypropylene in it. Correct? 20 20 indicate that all mesh products on the market today Α Yes. 21 21 cause an initial and chronic inflammatory tissue 22 Q I think you implanted that mesh in 150 of 22 response in the recipient after implantation. Correct? 23 your patients. Right? 23 That's what we found out and published. Α 24 Yes. 24 Every single one of them? 25 Q 25 Α Yes. But it doesn't say anything about the And that's an Ethicon product. Right? 3532 3534 Α extent. 1 (Witness nods head.) 1 2 Q Now, sir --2 And, sir, when you were putting the meshes 3 Α But, you know, it never -- it's used for in your patients, the 300 patients, you knew about all laparoscopic incisional hernia repair. There it's of these risks, but you implanted them nonetheless 4 5 forbidden to use any unprotected polypropylene mesh to because you believed the benefits of the mesh outweighed the risks. Correct? 6 place it underneath. 6 It's always a very careful decision whether to 7 So these are all open surgeries. It is a 7 8 failure in our field if you are using polypropylene 8 make it or not. It depends from the patient, from the age, from the location, from this analysis of the 9 meshes in the abdominal cavity. 9 10 And, sir, in the 1980s and then in the 10 individual risk balance that can be done. And as I 1990s and then all the way up to 2005 or '6 when you told you, that is a permanent discussion at our 11 11 12 stopped doing surgery --12 conferences every year, ours. 13 Α 2006. 13 Yes. And, sir, the reason that it's a 14 Q -- 2006, you knew that all of these 14 permanent discussion at all of your meetings and the surgical meshes that you were implanting carried reason you've been discussing it since 1995 is because 15 15 certain risks. Correct? no perfect mesh has been built yet, has it? 16 16 17 Α Yes. 17 It is well agreed by all of my colleagues that Q And that would include the risk of 18 there will be never a perfect mesh that fulfills all 18 19 infections? 19 these requirements. There will be no serious Α 20 20 Yes. researcher or surgeon who will claim that there will be Q 21 21 And the risk of chronic pain? one ideal mesh for every purpose. It is not

02/04/2013 11:51:09 PM Page 3531 to 3534 of 3681 40 of 106 sheets

22

23

24

25

imaginable.

Q

Sir, let's -- I'm handing you an article

marked Defendant's Exhibit DLTB00045.

Have you looked at that, sir?

22 A

23

24 A

25

Yes.

Yes.

And the risk of adhesions?

And the risk of mesh shrinkage?

Q

O

MR. ANDERSON: We specifically didn't go into Prolift+M. Plus he doesn't subscribe to these. He's not a urogyn. You did a great job of saying what he doesn't do and what he hasn't reviewed. These would be great for urogynecologists. You had your chance with Weber would be my position, respectfully.
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	And we've got the number of patients. Correct? A That is correct. Q So here we've got 75 in this one, 526, 254, 127, all the way down here to 323. Correct? A Yes. Q And they're all getting the Prolift except we got one Prolift+M. Correct? A That is correct. Q And then these are the different types of Prolifts. These are either the anterior, the posterior, or the total. Correct? A Yep. Q This is how far out they're coming back and checking in with the women. Right? A Right. Q So in this one, for example, the mean	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	who ever has done this. He doesn't prescribe to these. MR. GAGE: There's a very specific point that I want to go to. THE COURT: What's that? MR. GAGE: That is that the Prolift+M, which has the larger pores than does Prolift, has a lower cure rate and a mesh exposure rate that is basically the same. MR. MAZIE: He hasn't gone into Prolift+M. MR. ANDERSON: We specifically didn't go into Prolift+M. Plus he doesn't subscribe to these. He's not a urogyn. You did a great job of saying what he doesn't do and what he hasn't reviewed. These would be great for urogynecologists. You had your chance with Weber would be my position, respectfully. This guy is a biomaterials science
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	And we've got the number of patients. Correct? A That is correct. Q So here we've got 75 in this one, 526, 254, 127, all the way down here to 323. Correct? A Yes. Q And they're all getting the Prolift except we got one Prolift+M. Correct? A That is correct. Q And then these are the different types of Prolifts. These are either the anterior, the posterior, or the total. Correct? A Yep. Q This is how far out they're coming back and checking in with the women. Right? A Right. Q So in this one, for example, the mean follow-up, kind of like the average, I know that	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	who ever has done this. He doesn't prescribe to these. MR. GAGE: There's a very specific point that I want to go to. THE COURT: What's that? MR. GAGE: That is that the Prolift+M, which has the larger pores than does Prolift, has a lower cure rate and a mesh exposure rate that is basically the same. MR. MAZIE: He hasn't gone into Prolift+M. MR. ANDERSON: We specifically didn't go into Prolift+M. Plus he doesn't subscribe to these. He's not a urogyn. You did a great job of saying what he doesn't do and what he hasn't reviewed. These would be great for urogynecologists. You had your chance with Weber would be my position, respectfully. This guy is a biomaterials science researcher, abdominal surgery. You went into it, you
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	And we've got the number of patients. Correct? A That is correct. Q So here we've got 75 in this one, 526, 254, 127, all the way down here to 323. Correct? 23 the Prolift+M has larger pores, you can certainly

24 establish that through this witness. But the success

25 rate as far as -- and he's indicated he doesn't know

23

24

25

median, 54 months.

going in -- 54 months is what?

But essentially, bottom line is they're

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 44 of 108 PageID #: 113730

1 whether we're talking functional success rate, 1 Sir, I'm handing you a copy of Defendant's 2 anatomical success rate. It's not within his Exhibit 372. Give you just a second to look that over. 3 expertise. You can ask him if there's larger pores. 3 That's an internal e-mail from Ethicon. 4 And then you can bring the study up with one of your Correct? 4 5 witnesses. I'm sure you will. It appears to be so, yes. 6 MR. ANDERSON: Thank you, Your Honor. 6 And you looked at a lot of internal 7 documents. Correct? Yes. 8 (The sidebar ended.) 8 Q 9 9 Correct? 10 BY MR. GAGE: 10 Α Yes. Q 11 Q And was this one of the ones that you 11 Jamey, let's put that back up. looked at? 12 Now, sir, the point of putting this up here 12 Α 13 No. 13 is to go to Prolift+M. That is actually the Ultrapro material. Q 14 14 I'm sorry? Correct? 15 Α No. 15 Α Q Yes, that is correct. 16 You never saw this document? 16 17 And the Prolift+M has larger pores than the 17 Α The first page, not. I'm --Prolift. Correct? Or the Ultrapro has the larger 18 18 I'm sorry, go ahead and take your time to pores than the Gynemesh PS. Is that fair to say? read it, and then I'm going to ask you, have you seen 19 19 This is not true with strain. Without strain, 20 this document before. 20 Α Yes. this is true. But if you apply some strain, it is not 21 21 22 true. 22 Sir, I'm not going to quiz you on the 23 Q What about without strain? 23 details, just kind of big picture. 24 Without strain, yes. 24 Do you remember --25 25 Α No, I have never seen it. It's got larger pores? 3540 3542 Α Q 1 Larger pores. 1 You've never seen it? 2 You can take that down. 2 Α No. 3 Let's put up Plaintiffs' Exhibit -- or 3 Q So I'm not going to read the whole thing to you, sir, because it's pretty lengthy, but, Jamey, 4 PLT0261. let's start here in the middle where it's from Cosson. 5 Sir, you remember, I think you talked about this article this morning. Do you remember that? Yeah, right there. All right. 6 6 7 7 So you know Dr. Cosson or you're familiar 8 Q And I think this was the article where you with him from looking at your documents. Correct? Α indicated it was -- let's just look at the title here. Yes. 9 9 Q "Shrinking of polypropylene mesh in vivo: An 10 He was one of the doctors I think that was 10 in on the ground floor of Prolift. Is that fair to experimental study in dogs." Right? 11 11 12 That is right. 12 say? 13 Q That's one of your studies, Uwe Klinge. 13 Α Yes. Q 14 Correct? 14 And I think he was -- I think he was Α 15 Yes. 15 involved in the TVM studies. Correct? Α I think we came down here, you mentioned 16 Yes. 16 17 something about meshes that contain a lot of 17 Q So he was there from the very beginning. polypropylene shrink to about 30 to 50 percent of their 18 Correct? 18 Α 19 original size. Correct? 19 If you -- yeah. Α Yes. 20 So here he is e-mailing somebody at ETHUS. 20 And you understand that to be Ethicon US. Now, sir, this study, if I understand it, 21 21 did not involve Gynemesh PS or Prolift. Correct? 22 22 Right? That is correct. 23 Α 23 Yes, uh-huh. 24 You take that down, and let's put up 24 And the date is February 25, 2004. 25 Defendant's Exhibit 372. 25 Correct?

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 45 of 108 PageID #: 113731

- 1 A Yes.
- **2** Q That is almost one year before Prolift goes
- 3 on the market. Correct?
- 4 A Yes.
- 5 Q And he says, "Joshua." And just so we get
- 6 things clear, I think he's from France. Right?
- 7 Dr. Cosson?
- **8** A I think so as well, yeah.
- **9** Q And you're from Germany, and sometimes
- 10 e-mails don't get quite typed the way that people that
- 11 speak English read it. So you may see some stuff in
- 12 here that doesn't quite make sense, but he says, "I
- 13 join you the answers. I apologize for the delay.
- 14 Sincerely yours, Michel." Right?
- **15** A You read it right.
- **16** Q So let's go to the next page. And let's
- 17 look at question number 7. "Is it critical that mesh
- 18 straps lay flat in channel or is it ok to be
- 19 rolled-up?" And Dr. Cosson says, "If the mesh is in
- 20 place, there is no problem for a roll-up."
- 21 Do you see that?
- 22 A Yes. This is evidence to class level 5, evidence
- 23 level 5. It's just expert, meaning no data.
- 24 Q You can take that down.
- 25 Now, sir, we talked about -- you talked
 - earlier about fibrotic bridging?
- **2** A Yes.

1

- **3** Q Where things build around the scar or build
- 4 around the mesh and form a scar plate. Right?
- **5** A Filling out the pores.
- **6** Q Filling out the pores.
- 7 And that's not a good thing --
- **8** A No.
- **9** Q -- in your opinion?
- **10** A Yeah. In most of the indications, if you made a
- 11 replacement of a knee ligament, maybe it's different.
- 12 It depends.
- 13 Q So on this subject, I'm going to hand you
- 14 Defendant's Exhibit DLTB00266.
- **15** Do you see that?
- **16** A Yes.
- 17 Q That is something -- that is a document you
- 18 have seen before. Correct?
- **19** A Yes, I have seen it.
- 20 Q And you've seen it because you wrote it.
- 21 Right?
- **22** A Yes.
- **23** Q All right. So the title of it is, "The
- 24 lightweight and large porous mesh concept for hernia
- 25 repair." Correct?

- 1 A Yes.
- **2** Q And I think you talked about Dr.
- 3 Klosterhalfen earlier?
- 4 A Yes.
- **5** Q And you and he are co-authors on this
- 6 document. Correct?
- 7 A Yes.
- **8** Q Let's go to the bottom so we can get a date
- **9** on it.
- **10** And this is 2005. Correct?
- **11** A Yes.
- 12 Q And, sir, let's flip over, it's page 105 of
- 13 the article, the reference number is Defendant's
- **14** LT266.3.
- **15** Do you see that?
- **16** A Yes.
- 17 Q And there's a header there called
- 18 "Integration into the abdominal wall biocompatibility."
- 19 Correct?
- **20** A That is correct.
- 21 Q When we talk about biocompatibility, I know
- 22 you probably have a lot more technical definition than
- 23 I can articulate, but as I understand it, it is
- 24 basically how well is the mesh going to do inside the
- 25 human body?

- 3546
- **1** A That is maybe your definition.
- **2** Q Well, that's what I said. That's just kind
- **3** of a big picture definition.
- **4** Biocompatibility is how the body reacts to
- **5** the mesh once it's implanted?
- **6** A It includes two parts. First is the function, so
- 7 you use this term to describe whether it has a good
- 8 biocompatibility or a bad. Therefore, we use this
- **9** term. And one aspect is always the function, whether
- 10 it's able to preserve to restitute the function, and
- 11 the second is whether this is combined with added
- **12** tissue damage to this.
- 13 Q Okay.
- **14** A And, therefore, it depends very much from the way
- 15 you use it. You cannot say that something has a
- 16 biocompatibility -- a high biocompatibility for any
- 17 purpose. That would be the same as if you are looking
- **18** for the ideal mesh for every purpose.
- **19** Q But can we agree that biocompatibility --
- 20 we want our meshes to be biocompatible?
- **21** A I hope so.
- 22 Q Right. I mean, biocompatibility, when we
- 23 talk about having good biocompatibility, that's a good
- 24 thing for the patient. Correct?
- **25** A Yes, if --

- **1** Q And when we talk about bad
- 2 biocompatibility, that's a bad thing for the patient.
- **3** Correct?
- 4 A Yes.
- 5 Q Now, let's go down to the bottom of the
- **6** beginning of this second paragraph. "Today, it is not
- 7 fully clear why inert and nonimmunogenic materials
- 8 induce this type of inflammation known as foreign body
- 9 reaction (FBR)."
- **10** And, sir, I think you talked about foreign
- 11 body reaction when you were up here, when Mr. Anderson
- **12** was asking you questions?
- **13** A Yes.
- 14 Q And foreign body reaction and
- **15** biocompatibility are related notions?
- **16** A It has to be considered, of course.
- 17 Q But, I mean, in other words, foreign body
- 18 reaction and biocompatibility are more or less the same
- 19 thing?
- **20** A No, no, definitely not. Because a foreign body
- 21 reaction, you always have -- you always -- you
- 22 cannot -- there is hardly any situation where you don't
- 23 have the macrophages around the foreign body.
- 24 Q That's with every mesh?
- 25 A Yes. Therefore, a foreign body reaction, you
- 1 always have it.
- 2 Q Correct.
- **3** A But the extent of foreign body reaction, this is
- 4 important for the function later on. And, therefore,
- **5** we are coming back to the design for the function for
- 6 the purpose where to place it.
- **7** Q Right. And what I meant --
- **8** A But foreign body is a completely separate thing.
- **9** Q What I meant I think -- you have a
- 10 scientific mind and I don't. I didn't mean it quite at
- **11** that level. I think what my --
- **12** A Therefore, I'm sitting here and you're standing
- 13 there.
- **14** Q That's exactly right.
- **15** A Yes.
- 16 Q What I mean is that biocompatibility and
- 17 foreign body reaction both, at a very high level, deal
- **18** with concepts of the mesh once it's inside the body.
- 19 Correct?
- **20** A I didn't understand this question clearly. There
- 21 is -- as I told you --
- 22 Q I tell you what, let's keep going. I think
- 23 we'll be able to solve our problem as we keep reading
- 24 through this document.
- **25** A I'm sure. It's not helpful to stick to this.

- 1 Q Okay. "So today it is not fully clear why
- 2 inert and nonimmunogenic materials induce this type of
- 3 inflammation known as foreign body reaction (FBR)."
- **4** That's what you just discussed, right, FBR?
- **5** A We discussed foreign body reaction. This
- 6 sentence means that we don't know at a genetic and
- 7 molecular level what exactly happens. You always saw
- 8 these macrophages, but what goes in detail there, we
- **9** know a lot of molecules today, so there are some --
- 10 there has to be done a lot of research to understand
- 11 this better. This is what this sentence is expressing.
 - tills better. This is what this sentence is expressin
- 12 Q So let's go to page 111 of the article,
- **13** which is Defendant's Literature 266.9. And let's
- 14 highlight the first couple of sentences -- or let's go
- **15** up to this fibrotic bridging section.
- **16** Sir, I believe you talked briefly about
- 17 fibrotic bridging. Do you recall that?
- **18** A What?
- 19 Q I believe you talked earlier about --
- **20** A Yes.

21

24

- Q -- fibrotic bridging?
- **22** A Yeah, sorry. I read it already.
- 23 Q Oh, that's fine.
 - So we see up here, "Fibrotic bridging is a
- 25 phenomenon which is, in the author's opinion" -- and
 - 3550
- 1 that's you. Correct? You and others?
- **2** A Yes.
- **3** Q -- "closely associated with the occurrence
- 4 of shrinkage."
 - **5** We've talked about shrinkage, haven't we?
 - 6 A Yes.
 - 7 Q "Moreover, the incidence of bridging is
 - 8 unrelated to the textile structure of the mesh."
- **9** That's what that sentence says. Correct?
- **10** A Yeah.
- 11 Q And then it says, "Bridging occurs in all
- **12** mesh modifications with a granuloma size around each
- 13 mesh fiber exceeding more than half of the pore size of
- 14 the mesh." Correct?
- **15** A Yes.
- 16 Q Now, Jamey, if we could, let's pull out and
- 17 go to the next column on the same page under the
- 18 heading --
- **19** A The next sentence would be helpful.
- **20** Q No, no, no. Down here to "Chronic pain."
- 21 There we go.
- 22 All right. So -- and, sir, you talked
- 23 about -- I think you talked about pain earlier this
- 24 morning. Correct?
- **25** A Yes.

	5551		3000		
1	Q And chronic pain means pain that keeps	1	variation of fiber diameter, knotting or weave		
2	going. Right?	2	configuration and size of pore and/or interstices.		
3	A Yes.	3	Meshes can be made from knitted single		
4	Q It doesn't go away?	4	fiber-filaments," which they called monofilament		
5	A Yes.	_	· · · · · · · · · · · · · · · · · · ·		
_		5	materials, "or they can be braided with monofilament		
6	Q "In contrast to neuropathy-related	6	yarns, further woven as multifilament fibers in		
7	, ,		different ways and pore sizes."		
8	, , , , , , , , , , , , , , , , , , , ,		Now, sir, Gynemesh PS, going back to		
9	pause there before we finish the sentence.	9	Gynemesh PS, is it a knitted fabric?		
10	What we're talking about there, sir, is	10	A I think it would be named as a knitted fabric,		
11	during the operation, the patient has some nerve fibers	11	yeah.		
12			Q And it's a monofilament?		
13	after the surgery. Right?	12 13	A The term or the naming of monofilament has its		
14	A It can, yeah.	14	limitation. The filament that is used is a		
	_ ' '				
15	Q So in contrast to that kind of pain, the	15	monofilament instead of a multifilament. But at the		
16	onset of chronic pain as a consequence of the	16	knots, it is a multifilament or oligiofilament		
17	fibrotic of the FBR is typically more than one year	17	structure because that means that the filaments are		
18	after hernia repair?	18	coming close together.		
19	A In the groin.	19	Q So now let's go up to Figure 1. And let's		
20	Q That's what you've got right there.	20	just start here where it says, "Knitted fabrics." It		
21	Correct?	21	says, "Knitted fabrics have a more open structure than		
22	A Uh-huh.	22	woven. The knit construction allows the mesh to be		
23	Q Sir, we talked about I should say you	23	stretched in both directions to accommodate and		
24	talked about. We talked about that we talked about	24	reinforce tissue defects. Fabric is produced in such		
25	some of the testing on the mesh. Do you remember that?	25	fashion as to interconnect each filament yarn and		
	3552		3554		
			0004		
1		1			
	A Yes.	1 2	provide bidirectional elasticity, while allowing the		
2	A Yes. Q And we talked about uniaxial and	2	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns."		
2	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that?	2	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir?		
2 3 4	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes.	2 3 4	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah.		
2 3 4 5	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's	2 3 4 5	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you.		
2 3 4 5 6	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139.	2 3 4 5 6	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to		
2 3 4 5 6 7	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before.	2 3 4 5 6 7	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift.		
2 3 4 5 6 7 8	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct?	2 3 4 5 6 7 8	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break.		
2 3 4 5 6 7 8 9	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it.	2 3 4 5 6 7 8 9	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay.		
2 3 4 5 6 7 8	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct?	2 3 4 5 6 7 8	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break.		
2 3 4 5 6 7 8 9	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct?	2 3 4 5 6 7 8 9	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay.		
2 3 4 5 6 7 8 9	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct?	2 3 4 5 6 7 8 9	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute		
2 3 4 5 6 7 8 9 10	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct?	2 3 4 5 6 7 8 9 10	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute		
2 3 4 5 6 7 8 9 10 11	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct.	2 3 4 5 6 7 8 9 10 11	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break.		
2 3 4 5 6 7 8 9 10 11 12 13	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in	2 3 4 5 6 7 8 9 10 11 12 13	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break.		
2 3 4 5 6 7 8 9 10 11 12 13 14	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and	2 3 4 5 6 7 8 9 10 11 12 13	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.)		
2 3 4 5 6 7 8 9 10 11 12 13 14 15	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.)		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page. Do you see that header down there,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.) THE COURT: You can bring the jury in.		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page. Do you see that header down there, "Synthetic implants"?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.)		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page. Do you see that header down there, "Synthetic implants"? A Yes.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.) THE COURT: You can bring the jury in. (The jury enters the courtroom.)		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page. Do you see that header down there, "Synthetic implants"? A Yes. Q All right. So "Polypropylene mesh became	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.) THE COURT: You can bring the jury in. (The jury enters the courtroom.) THE COURT: You can be seated and you can		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page. Do you see that header down there, "Synthetic implants"? A Yes. Q All right. So "Polypropylene mesh became the most commonly used synthetic prosthesis. Simple	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.) THE COURT: You can bring the jury in. (The jury enters the courtroom.) THE COURT: You can be seated and you can continue, Mr. Gage.		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A Yes. Q And we talked about uniaxial and multiaxial. Do you recall that? A Yes. Q I'm going to hand you an article here, it's Defense or DLTB00139. Sir, you've seen this article before. Correct? A Yeah, I've seen it. Q This article comes out in 2005. Correct? So it's 2005. Correct? A Yeah, that is correct. Q And these are a number of surgeons in Belgium out of the department of obstetrics and gynecology. Correct? A That is correct. Q So let's go over let's go to the next page. Do you see that header down there, "Synthetic implants"? A Yes. Q All right. So "Polypropylene mesh became	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	provide bidirectional elasticity, while allowing the mesh to be cut to any shape without loosening yarns." Did I read that correctly, sir? A You read it correctly, yeah. Q Thank you. MR. GAGE: All right. Judge, I'm about to do a big shift. THE COURT: Let's take a break. MR. GAGE: Okay. THE COURT: We'll take a 10- or 15-minute break. (The jury leaves the courtroom.) (A recess was taken from 2:36 p.m. to 2:58 p.m.) THE COURT: You can bring the jury in. (The jury enters the courtroom.) THE COURT: You can be seated and you can		

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 48 of 108 PageID #: 113734

1 Dr. Klinge, I'm handing you a copy of is going to probably see some things that talk about 2 the -- this is your effective porosity article. The 1,000 microns. So let's get everybody accustomed to 3 jury has seen it a number of times. Jamey, let's put 3 what we're talking about. 4 it up. I've got it as PLT0346. 4 As I understand it, 1 millimeter is how 5 Dr. Klinge, the jury has heard Dr. Muhl. 5 many microns? 6 Have you read Dr. Muhl's testimony? 6 Α 1,000. 7 Α 7 Q Yes. So 1 millimeter is 1,000 microns? Α 8 Q So you know what he's already told the 8 Yes. 9 Q 9 And so when you did the testing here, you jury? 10 Α This testimony here? No, I didn't get it. 10 did the same thing that you did with the Prolift testing -- to the Prolift mesh in 2012. Right? 11 Well, I'm not going to cover every single 11 12 aspect of the testing, because we covered a lot of that 12 Α Yes. 13 Q 13 with Dr. Muhl, so I didn't want you to feel like I was I mean, it's the same testing. Right? 14 Α Yes. 14 leaving out some portions and asking you only about others, but we covered a good bit of it. I want to 15 Q 15 Same testing method? Α Yeah. just kind of hit the stuff that --16 16 17 Α I'm happy with it. 17 Q And you looked at the mesh. And using 18 Q That's good. 18 cameras and a computer, you counted the number of pore 19 So bottom line is -- well, the first thing 19 spaces that were larger than 1 millimeter. Correct? Α I want to establish is you didn't publish this until 20 Yes. 20 Q 21 21 2007. Right? And if the mesh doesn't have a pore size 22 Α Yes. 22 that's larger than 1 millimeter, it's got 0 percent 23 Q And that's when the results of this new 23 effective porosity. Correct? 24 Α Yes. 24 objective measurement, I mean, that's when it went out. 25 Q 25 Right? 2007? So Sofradim was another mesh, and it had a 3556 3558 Α 1 Yes. 29 percent effective porosity. Right? 1 2 Q And you're one of the authors. Right? 2 Α Yes. 3 Along with Dr. Muhl? 3 Q And TiMesh light had 0 percent effective Α porosity? 4 Yes. 4 Now, let's go to -- it's one, two, three, 5 O 5 Α Yes. Q 6 four -- it's the fifth page, Jamey. And there's 6 And DynaMesh polypropylene light had 7 Table 1 at the bottom of that page. 7 42 percent. Correct? 8 Dr. Klinge, you remember Table 1? Do you 8 Α Yes. 9 see that? 9 So DynaMesh basically won the kind of best 10 Α Yes, I see it. 10 in show, right, at least for purposes of your testing. 11 Q Now, you tested four meshes, Optilene, 11 Correct? 12 Sofradim, TiMesh and DynaMesh. Right? 12 Α I would object to the term "won." Α 13 13 Yes. Fair enough. It had the best effective 14 Q Just so the jury follows where we're going, 14 porosity of any of the four meshes that you tested? 15 Α Yes. 15 this is the testing you did in 2007, not the testing 16 16 you did of Prolift in 2012. Right? Now, you also tested a DynaMesh mesh in 17 Α Yes. 17 2012 when you tested the Prolift mesh. Correct? Α Now, Optilene, if we go over here on the 18 Yes. 18 19 table, had 0 percent effective porosity. Correct? 19 Q And it was a pelvic floor mesh? Α Α 20 Yes. 20 Yes. 21 And I think you said that's because none of 21 Q It's made of a different material called the pores were larger than 1 millimeter. Right? PVDF. Correct? 22 22

23 Α

24

25

Yes.

If I remember the wording from your expert

report, you said that the DynaMesh mesh had excellent

Α

Yes.

And we've talked a lot about 1 millimeter

and we've also talked about 75 microns. And the jury

Q

23

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 49 of 108 PageID #: 113735

- **1** porosity -- I'm sorry, excellent effective porosity.
- 2 Correct?
- **3** A It has a higher, because it has a higher
- 4 structural stability, yes.
- **5** Q So when we ran the 2012 test, we had a
- 6 DynaMesh mesh and we had one made by Ethicon. And the
- 7 DynaMesh test or the DynaMesh mesh in 2012 had the
- 8 higher effective porosity. Correct?
- **9** A Yes.
- **10** Q Now, DynaMesh is manufactured by a company
- 11 called FEG. Right?
- **12** A Yes.
- 13 Q And they're in Aachen. Right?
- **14** A Yes.
- **15** Q They're a German mesh maker?
- **16** A And they made the Vypro for Ethicon at that time.
- 17 Q And I think you're a paid consultant to
- **18** FEG?
- **19** A Yes.
- **20** Q And you and Dr. Muhl do a lot of work with
- 21 them, with FEG?
- **22** A We have some granted studies with them.
- 23 Q And you've been studying their mesh for how
- 24 many years? If we go back to '07, you've been doing
- 25 their mesh for at least five years. Right? You've

3560

- 1 been working with them for the last five years. Right?
- **2** A They have been employed for the first time in
- 3 1994 to produce the Vypro with us, because Ethicon at
- 4 that time, they needed someone from the Institute for
- **5** Textile Engineering in Aachen. And so these guys, they
- 6 give the structure of the Vypro at that time. And
- 7 since then we are working on finding best solutions for
- 8 meshes.
- **9** Q I understand that and --
- **10** A So I'm working since 1994 with these guys.
- 11 Q So since '94 you've been working with FEG?
- **12** A Yes.
- 13 Q And you worked with Ethicon up until about,
- **14** what, '05 as a consultant?
- **15** A 2005.
- **16** Q 2005. And then you were no longer a
- 17 consultant for Ethicon. Correct?
- **18** A Yes.
- 19 Q But did you stay as a consultant for FEG
- **20** after 2005?
- 21 A Yeah. We had a lot of -- or several granted
- **22** projects together.
- 23 Q As we sit here today, you are a paid
- 24 consultant for FEG. Correct?
- **25** A Yes.

- 1 Q You talked about patents earlier. Do you
- 2 remember that?
- 3 A Yes.
- **4** Q Those are mesh patents. Right?
- 5 A Yes.

6

8

- Q Did you assign those patents to FEG?
- **7** A I didn't get the content of the sentence?
 - Q Did you assign those patents to FEG?
- **9** A With the FEG. They were patents from the FEG
- 10 where I was a contributor to this.
- 11 Q So you invented meshes. Correct? Or
- 12 helped to invent meshes. Correct?
- 13 A Yes, yes.
- 14 Q And then you got a patent on that mesh.
- 15 Correct?
- **16** A I was mentioned on this patent, yes.
- 17 Q Because you helped to invent it. Correct?
- **18** A Yes.
- 19 Q And then FEG, did they buy the patent from
- 20 you?
- **21** A No.
- **22** Q You gave them the patent?
- **23** A No. They claimed this patent for these meshes,
- 24 and they made --
- 25 Q Listed your name?

- 1 A And they listed my name as a contributor. This
- 2 was a procedure not done by every company, I have to
- 3 admit.
- 4 Q And what year did you start as a paid
- 5 consultant for FEG? Was it '94 or did they start
- 6 paying you sometime after '94?
- **7** A No. It was '98 maybe, '99.
- 8 Q So the last 14, 15 years you've been
- **9** working for them?
- **10** A As I told you, together with Ethicon, we have
- **11** been working with the FEG starting in 1994.
- **12** Q But the Ethicon work stopped in '05.
- 13 Right? Your Ethicon worked stopped in '05. Right?
- 14 A Yes. And the Ethicon work with the FEG stopped I
- **15** think in 1997, 1998.
- **16** Q For example, if we go to the DynaMesh
- 17 website, the FEG website, we're going to find a picture
- **18** of you on the website. Right?
- **19** A I haven't seen it myself, but --
- **20** Q You haven't seen the picture of the
- 21 newspaper interview with you on the website?
- 22 A I know there has been a -- we got an award to
- 23 make a grant for visible meshes, and there has been a
- 24 report in the newspaper and maybe they placed it on the
- 25 website, but I didn't control their website. But it

- **1** was an excellent project.
- **2** Q So we got this testing going on. And I
- 3 looked in the article, and it's not that big of a deal,
- 4 but you didn't -- there's no mention in the article
- 5 that you're a paid consultant for FEG or for DynaMesh.
- 6 Right?
- **7** A That is right. Maybe. So I have to check
- **8** whether there is any acknowledgment to any others.
- **9** Q And, sir, let me hand you another study.
- **10** I'm sure you've probably seen it. It's an article
- 11 called "Comparison of a lightweight polypropylene mesh
- 12 Optilene LP."
- And, sir, what I'm going to do up here,
- just so you and I are on the same page, I'm going touse the letters -- that's an E, it doesn't quite look
- **16** like it -- EP for effective porosity. That's what I
- 17 mean by EP.
- 18 A Yeah.
- **19** Q Okay. So Jamey, take down what you got on
- 20 the screen and let's put up, it's DLTB00863.
- 21 And here we see, sir, a comparison of a
- 22 lightweight polypropylene mesh Optilene LP, and they're
- 23 looking at another mesh made out of a different
- 24 material called PTFE. Correct?
- **25** A Yep.

1

3564

- Q And this is published in 2012?
- **2** A Yes.
- **3** Q In the Archives of Surgery?
- **4** A Yes.
- 5 Q And what we've got here are a number of
- 6 individuals, a number of physicians from the Department
- 7 of Surgery and Center of Minimally Invasive Surgery.
- 8 Do you see that? It's down here at the bottom. Let's
- 9 scroll up. Right there.
- 10 See, Department of Surgery and Center for
- 11 Minimally Invasive Surgery; is that right? And these
- **12** are doctors in Berlin. Right?
- **13** A In Berlin, yeah.
- 14 Q So let's go back up to the abstract. And
- 15 we see the purpose of the study, they say on the first
- **16** sentence, "The use of a mesh with good biocompatibility
- 17 properties" --
- 18 Biocompatibility, that's what we talked
- 19 about earlier. Right?
- **20** A Yes.
- 21 Q -- "is of decisive importance for the
- 22 avoidance of recurrences and chronic pain in endoscopic
- 23 hernia repair surgery."
- 24 And then we go a little further down to
- 25 "Methods," and we see that, "20 domestic pigs were

- 1 implanted with either a lightweight large pore
- 2 polypropylene mesh, in this case Optilene LP, or this
- 3 other medium weight PTFE mesh." Correct, sir?
- 4 A Yes.
- **5** Q And we see over on, I think it's two pages
- 6 over, Jamey, if you could, we see up in the top right,
- 7 we see, "HE staining."
 - And that's once you get -- what they do is
- **9** they put these meshes in pigs. Right?
- **10** A Yes.

8

11

- Q And then they let the pigs live for a
- 12 certain number of days. Right?
- 13 A Yeah.
- 14 Q And then, in this case, it was 94 days?
- **15** A Yeah.
- **16** Q And then the pigs are sacrificed. Correct?
- **17** A Uh-huh.
- 18 Q And then they take the mesh out, and then
- 19 they look at the mesh under microscopes. Correct, sir?
- **20** A Yes.

- Q And that's the sort of stuff you do? I
- 22 mean, you put meshes in animals and then later examine
- 23 them under microscopes. Correct?
- **24** A Yes.
- **25** Q So we're at page 285. And HE staining,
 - 3566
- 1 what's that, sir? Is that where you're staining the
- 2 slide so you can see them better?
- **3** A Yes. It marks the -- some cell components, the
- 4 nucleus, and so you can see a little bit better the
- **5** collagens or the scar.
- **6** Q So it says here, "HE staining showed good
- 7 integration of both meshes with only minor inflammatory
- 8 reaction and no bridging scar tissue between the
- 9 filaments"; is that right?
- **10** A Yes.
- 11 Q Then if we flip over to -- let's go to the
- **12** conclusion, Jamey, at the end of the article.
- **13** First paragraph of that conclusion. It
- **14** says, "In our experimental examinations, Optilene LP
- 15 and INFINIT showed comparable biocompatibility in terms
- **16** of chronic inflammatory reaction. The good tissue
- 17 integration and biocompatibility coupled with the good
- 18 adhesion characteristics on the tissue make the
- 19 Optilene and the INFINIT meshes suitable for
- 20 implantation in hernia repair surgery."
- 21 Did I read that correctly?
- **22** A Yes.
- 23 Q You can take that down.
- 24 All right, sir.
- 25 Jamey, can you put back up Dr. Klinge's

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 51 of 108 PageID #: 113737

- **1** 2007 article? Put up that Table 1. Do you remember?
- 2 It's PLT0346. There you go.
- **3** So now we're going to move on. We're going
- **4** to skip over Sofradim and we're going to go to TiMesh.
- 5 All right?
- **6** A Yeah.
- 7 Q And, again, TiMesh had 0 percent effective
- 8 porosity, Correct?
- 9 A Uh-huh.
- 10 Q Sir, I'm going to hand you an article
- 11 called -- well, let me just hand you that.
- **12** Sir, you're familiar with this article.
- 13 Correct?
- **14** A Yes.
- 15 Q I'm sorry, you can take this one down,
- 16 Jamey, the one that you've got up, and let's put up
- 17 DLTB00864. All right?
- **18** And, Doctor, that's the one you're holding
- 19 in your hands. Correct?
- **20** A Yes.
- 21 Q And you're familiar with this article?
- 22 This is an article that you are one of the authors on.
- 23 Correct?
- **24** A Yes.
- **25** Q And if we come down here, go up, Jamey.

356

- 1 Right there. That's good. Kind of in the middle of
- 2 this sentence, over in the abstract it says, "In
- 3 Sprague-Dawley rats, mesh samples were placed in a
- 4 subcutaneous position. And then 56, 84 and 182 days
- **5** after mesh implantation, three animals from each group
- 6 were sacrificed for morphological observations."
- **7** Right?
- 8 A Yes.
- **9** Q And that Sprague-Dawley rats are just a
- 10 type of rat that you use in some of your experiments.
- 11 Correct?
- **12** A Yes.
- 13 Q So in the prior study, we saw pigs. And in
- **14** this study, we see rats. Correct?
- **15** A Yes.
- **16** Q So after getting the TiMesh implanted in
- 17 them after 56, then 84 and then 182 days, the animals
- 18 were sacrificed and you took the meshes out and you
- 19 examined them under microscopes, like the guys did with
- 20 the Optilene in the pigs. Right?
- **21** A Yes.
- **Q** So let's go over, Jamey, to 864.4 and that
- 23 paragraph beginning, "Overall."
- We see that, "Overall, both mesh materials
- 25 showed a moderate foreign body reaction with a small

- 1 amount of connective tissue formation indicating a good
- 2 biocompatibility"; is that right? Did I read that
- **3** correctly?
- 4 A Yes.
- **5** Q Sir, I'm going to hand you another article,
- **6** and this one -- Jamey, this one is DLTB00865.
- **7** Sir, have you ever seen this article?
- 8 A I've seen it.
- **9** Q And the title on this one is "Randomized
- 10 clinical trial of laparoscopic hernia repair comparing
- 11 titanium-coated lightweight mesh and medium-weight
- 12 composite mesh." Correct?
- **13** A Yes.
- 14 Q And this is dated 2012. Correct?
- **15** A Yes.
- 16 Q TiMesh, the reason it's got "Ti" in front
- 17 of its name is because it's a got a little bit of
- 18 titanium that covers the mesh. Correct?
- **19** A Yeah.
- 20 Q So let's go up, Jamey. Let's look at
- 21 "Methods." "Randomized controlled single-center
- 22 clinical trial was designed using the basic principle
- 23 of one unit, one surgeon, one technique and two meshes,
- 24 a lightweight titanium coated mesh," and this is
- 25 TiMesh, sir, we'll see it later in the article, "and a
 - 3570
 - 1 medium-weight collagen-polyester composite mesh. The
 - 2 primary endpoints were pain and recurrence. The
- 3 secondary endpoints were morbidity and patient
- 4 outcomes."
- **5** And, sir, unlike the two that we looked at
- 6 earlier, this is actually in humans. Right?
- 7 A Yes

- Q This isn't an animal study. Correct?
- **9** A Yes.
- 10 Q And we see down here over on the
- 11 "Conclusions," and let's just block that paragraph on
- 12 the "Conclusions."
- 13 "The lightweight titanium covered
- **14** polypropylene mesh was associated with less
- **15** postoperative pain in the short term, lower analgesic
- 16 consumption and a quicker return to everyday activities
- 17 than the Parietex composite medium-weight mesh."
- 18 And the recurrence rates at two years were
- 19 no different; is that right? Did I read that
- 20 correctly?
- **21** A You read it correctly.
- **22** Q Then the next page -- you can take that
- 23 down. Jamey, the next page -- put that same article
- 24 back up. Let's just go to the second page, near the
- 25 bottom.

1 And we can see here, sir, that that's the 1 Α Yes. 2 2 Q TiMesh light that they were looking at. Right? And in scientific language, is that the symbol for microns? 3 All right. You can take that down. Α Yes. 4 Sir, I think I've already handed you this 4 article, but I've got another copy if you need it. 5 Q So if you -- as I understand this, what 5 6 This is Defendant's Exhibit DLTB00266. We've already this is saying is that the distance from this spot 7 referred to that once before, but feel free to use this right here running through this spot right here is 8 document. 8 2,530 microns. Correct? 9 9 And the jury has already seen this document That's what it says, yep. 10 or this article. This is your article. Correct, sir? 10 Q I'm sorry? Yes. 11 Α Yeah. 11 Q 12 So let's go over to 266.11. And under 12 Q Remember we talked earlier about how to "TiMesh light and extra light," we read down here, this compare millimeters to microns, we said that 1,000 13 13 is where you're talking about TiMesh light. Correct, 14 microns is equal to 1 millimeter. Correct? 14 sir? And TiMesh extra light? 15 Α Yes. 15 Α 16 Q 16 Yes. So if assuming the math and the 17 Q And "Both" -- it says here, "Both mesh 17 measurements here are correct, the distance from this spot right here to this spot right here would be 18 modifications were announced as a revolution on the 18 2,530 microns. Correct? 19 mesh market and have the best biocompatibility 19 Α That is correct. 20 possible. Indeed, the titanium modified meshes exhibit 20 21 a significantly increased biocompatibility compared Q And on this -- and then up here -- this is 21 with conventional heavyweight small porous meshes." 22 the width, and I guess they call that the height. 22 23 Correct? Did I read that right? 23 Correct? Α Α 24 Yes. 24 You can call it --25 Q 25 Q Sir, we're now going to move to Gynemesh You can call it whatever you want to call 3574 1 and Prolift, which you tested not in 2007 but in 2012. it, but at least the distance here is 1,750 microns. 2 Correct? Correct? 3 Α Yeah. 3 Α Yes. Q And then here it says, "Macroporous." 4 Sir, I'm going to hand you Defendant's 4 Exhibit 2257.46. Sir, I've only got one copy, so I'm 5 5 I think you talked earlier about going to let you look at it, then I might take it back microporous and macroporous. Correct? 6 6 from you for just a second. 7 7 Yes. Α 8 That's fine. 8 Q And microporous means the mesh has a small 9 Just take a look at that. pore; is that correct? I know that you can get --10 After you've had a chance, is that one of 10 You can use this expression if you made a the documents that you were sent? reference that this is the definition of Amid from 11 11 12 Α Yeah, I have seen it. 12 1997, and then this is the type of macroporous. 13 Q That's an Ethicon document; is that right? 13 So under the Amid classification that Α 14 Yes. 14 you talked about, which was I guess Dr. Amid; is that 15 Q And, sir, I've got a sticky there. 15 right? Α Do you see the sticky on that page? 16 Prof. Amid. Prof. Amid. 16 17 Α Sticky? 17 He created a classification of meshes and Q Yeah. That's what we got up on the screen. published on it back in 1997; is that right? 18 18 Α 19 Right? 19 In the first issue of Hernia, yes. Α 20 In the first issue of Hernia. 20 Yeah, yeah. And it says here, "Pore size of Gynecare 21 And under his definition, this would be --21 Gynemesh PS"; is that correct? the Gynecare Gynemesh PS would be defined as 22 22 Α Yeah. 23 23 macroporous because it had pores at least 75 microns. 24 And then down here we've got 2530, and 24 Right?

25

Α

Yes.

that's kind of a funky looking UM. Right?

	Case 2:12-md-02327 Document 2960-8 File	d 10)/12/	16 Page 53 of 108 PageID #: 113739		
1	Q You can take that down.	1				
2	Sir, I'm handing you what's been marked as	2	you're looking at. Right?			
3	DLTB00104.	3	Α	Yes.		
4	And, sir, you know this article because you	4		Q And you got one here that's 2.5. Correct?		
5	wrote it. Correct?	5	Α	Yes.		
6	A Yes.	6		Q And where's that PowerPoint?		
7	Q And this is published in Hernia in 2004.	7		It looks a whole lot like that Gynemesh		
8	Correct?	8	8 PowerPoint?			
9	A Yes.	9	Α	Yes.		
10	Q And the title is "Polypropylene in the	10		Q Now, were you testing Gynemesh?		
11	intra-abdominal position: Influence of pore size and	11	Α	Gynemesh?		
12	surface area." Correct?	12		Q Were you testing Gynemesh here?		
13	A Yes.	13	Α	Gynemesh?		
14	Q Jamey, let's go to the next page, 104.2.	14	_	Q Yes.		
15	And here, sir, under number 2, we see	15	Α	Gynemesh.		
16	"Group II." Correct?	16		Q Or Prolene Soft?		
17	A Yes.	17	Α	Yeah. As I said in the deposition, I cannot be		
18	Q In other words, I think what was going on	18		. There is there are a lot of similarities.		
19	here, sir, is you were looking at several different	19		ether this was exactly coming out of the product or		
20	polypropylene meshes. Correct?	20		ther it was specifically done, I cannot state. But		
21	A That is correct.	21		oks quite similar, so from this appearance, there		
22	Q That's what you were doing in this study?	22	seer	ns not to be a difference.		
23	A Very, very huge lot of pores. We wanted to have	23		Q And in this article, you were the author.

Q Heavyweight mesh for monofilament	25 1 2 3 4 5 6 7 8 9 10 11 12	A And in he other with neighbors A	Yes. 3578 Q And you wrote down 2.5, didn't you? Yeah. Q Jamey, let's go to 104.6. Same article. let's go down here toward the bottom. And it says, "Polypropylene has been used ernia surgery for almost five decades. Compared to er biomaterials, it shows a high biocompatibility, no degradation but a good integration into the hboring tissue." Correct? Yes. Q And then, Jamey, let's take that one down. We'll go to the next one. Sir, this is		
1 2 3 4 5 6 7 8 9 10 11 12 13	abdominal cavity at this. 3576 Q So you looked at three different polypropylene meshes are investigated. Correct? A Yes. Q And they all differed in weight, filaments and pore size. Correct? A Yes. Q And there's Group I, and they were small porous with pore sizes of .6 millimeter. And if it's .6 millimeter, that would be 600 microns. Correct? A Yes. Q Heavyweight mesh for monofilament polypropylene. And then we go to Group II. And it's PP 2.5. And that means the medium porous, the pore	25 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15	A And in he other with neighborhard A Defermance	Yes. 3578 Q And you wrote down 2.5, didn't you? Yeah. Q Jamey, let's go to 104.6. Same article. let's go down here toward the bottom. And it says, "Polypropylene has been used ernia surgery for almost five decades. Compared to er biomaterials, it shows a high biocompatibility, no degradation but a good integration into the hboring tissue." Correct? Yes. Q And then, Jamey, let's take that one down. We'll go to the next one. Sir, this is endant's Exhibit DLTB00259. You're familiar with this one? This is ther article that you wrote, sir. Correct?		
1 2 3 4 5 6 7 8 9 10 11 12 13 14	abdominal cavity at this. 3576 Q So you looked at three different polypropylene meshes are investigated. Correct? A Yes. Q And they all differed in weight, filaments and pore size. Correct? A Yes. Q And there's Group I, and they were small porous with pore sizes of .6 millimeter. And if it's .6 millimeter, that would be 600 microns. Correct? A Yes. Q Heavyweight mesh for monofilament polypropylene. And then we go to Group II. And it's PP 2.5. And that means the medium porous, the pore size is 2.5 millimeters. Correct?	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	A And in he other with neighbors A Defe	Yes. 3578 Q And you wrote down 2.5, didn't you? Yeah. Q Jamey, let's go to 104.6. Same article. let's go down here toward the bottom. And it says, "Polypropylene has been used ernia surgery for almost five decades. Compared to er biomaterials, it shows a high biocompatibility, no degradation but a good integration into the hboring tissue." Correct? Yes. Q And then, Jamey, let's take that one down. 51 of 106 sheets Page 3575 to 3578 of 3681 02/04/2013 11:51:09 PM

22 A

23

24

25

Yes.

And let's go into the abstract, about two

or three sentences down, beginning with "In the present

Q

study."

Q

Yes.

Q

the words on the paper say.

22

23

24 25 And, sir, I'm just simply asking you what

And let's go over to the next page. And

	Case 2.12-mu-02327 Document 2900-8 File 3579		3581
1	And, sir, in the abstract you often	1	Correct?
2	describe what it is you're doing so that the readers	2	A Yep. That's in the table.
3	don't have to go through the entire article to	3	Q And then let's go to the conclusion or
4	understand what you're doing. Right?	4	toward the end on 259.7.
5	A Yes.	5	And, sir, part of what you were looking at
6	Q "So in the present study, a low-weight	6	here was you were looking at a heavyweight mesh and a
7	polypropylene mesh (LW)"	7	lightweight mesh and you were asking yourself or you
8	And I assume by that you just mean low	8	guys were studying the question whether it's better to
9	weight. Correct?	9	have a low weight mesh than a heavyweight mesh in terms
10	A Yeah.	10	of complications. Right?
11	Q "made purely of monofilaments was	11	A Yeah.
12	compared to a common heavy-weight polypropylene mesh	12	Q And when we go here to the end near the
13	(HW) in regard to the functional consequences and the		bottom where it begins, "Therefore." It's kind of
14		13 14	_
	tissue response."		where you're summing up your conclusions. And it says,
15	And then, sir, you go on to indicate that	15	"Therefore, a reduction of the mesh material, and of
16	you again, you were implanting mesh in rats, and you	16	the foreign body surface, in particular, to the lowest
17	were letting them go anywhere from three to 90 days,	17	extent possible is recommended. The present study
18	and then you were sacrificing the rats and then you	18	shows for the first time that this aim can be achieved
19	were looking at the mesh after the tissue had grown	19	by the exclusive use of nonabsorbable polypropylene
20	into it under microscopes and the other instruments	20	monofilaments."
21	that you use. Correct?	21	Did I read that correctly?
22	A Yeah.	22	A Yes.
23	Q And if we go down to the bottom of this	23	Q Sir, I'm handing you Defendant's Exhibit
24	page, we actually see right there at the bottom that	24	DLTB00150.
25	Ethicon was one of the grant sponsors for this study of	25	Have you seen this before, sir?
	3580		3582
1	yours. Correct?	1	A No, I cannot recall it.
2	yours. Correct? A That is correct. They did they got a report	2	A No, I cannot recall it. Q Sir, the title of this article is
2 3	yours. Correct? A That is correct. They did they got a report of it.	2	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal
2 3 4	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90	2 3 4	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery."
2 3 4 5	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right?	2 3 4 5	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct?
2 3 4 5 6	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah.	2 3 4 5 6	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep.
2 3 4 5 6 7	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up	2 3 4 5 6 7	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the
2 3 4 5 6 7 8	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3.	2 3 4 5 6 7 8	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology
2 3 4 5 6 7 8 9	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics	2 3 4 5 6 7 8 9	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct?
2 3 4 5 6 7 8 9	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct?	2 3 4 5 6 7 8 9	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep.
2 3 4 5 6 7 8 9 10	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes.	2 3 4 5 6 7 8 9 10	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the
2 3 4 5 6 7 8 9 10 11	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW	2 3 4 5 6 7 8 9 10 11	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you
2 3 4 5 6 7 8 9 10 11 12 13	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in	2 3 4 5 6 7 8 9 10 11 12	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir?
2 3 4 5 6 7 8 9 10 11 12 13	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW.	2 3 4 5 6 7 8 9 10 11 12 13	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as
2 3 4 5 6 7 8 9 10 11 12 13 14 15	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as well, it is possible, of course.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as well, it is possible, of course. Q But I don't think but you personally
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct? A Yep. Q That's basically Gynemesh.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as well, it is possible, of course. Q But I don't think but you personally don't have a subscription, you don't get this mailed to
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct? A Yep. Q That's basically Gynemesh. A Yep.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as well, it is possible, of course. Q But I don't think but you personally don't have a subscription, you don't get this mailed to your home, the journal of urogynecology I mean, I'm
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct? A Yep. Q That's basically Gynemesh. A Yep. Q Right? It's 45 grams?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. For the university as well, it is possible, of course. Q But I don't think but you personally don't have a subscription, you don't get this mailed to your home, the journal of Urology, do you?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct? A Yep. Q That's basically Gynemesh. A Yep. Q Right? It's 45 grams? A Quite similar, yeah.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as well, it is possible, of course. Q But I don't think but you personally don't have a subscription, you don't get this mailed to your home, the journal of urogynecology I mean, I'm sorry, the Journal of Urology, do you? A No, I don't get it at home.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct? A Yep. Q That's basically Gynemesh. A Yep. Q Right? It's 45 grams? A Quite similar, yeah. Q And the pore sizes here you indicate are	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. Q And I don't know if we've covered the Journal of Urology, but that's not a journal that you subscribe to. Correct, sir? A Not for our department. For the university as well, it is possible, of course. Q But I don't think but you personally don't have a subscription, you don't get this mailed to your home, the journal of urogynecology I mean, I'm sorry, the Journal of Urology, do you? A No, I don't get it at home. Q And we see that it's authored by we've
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	yours. Correct? A That is correct. They did they got a report of it. Q According to the study, sir, you had 90 male rats were studied. Does that sound right? A Yeah. Q Let's go to the table on page 131, up toward I'm sorry, it's actually 259.3. Sir, these are the textile characteristics of the two meshes that you were testing. Correct? A Yes. Q And you called it here a heavyweight, HW and low weight, low W, and I want to kind of focus in on the LW. Now, it says 45 grams. Correct? A Yep. Q That's basically Gynemesh. A Yep. Q Right? It's 45 grams? A Quite similar, yeah. Q And the pore sizes here you indicate are greater than 1 millimeter. Correct? Or greater than	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A No, I cannot recall it. Q Sir, the title of this article is "Histological inflammatory response to transvaginal polypropylene mesh for pelvic reconstructive surgery." Correct? A Yep. Q All right. And if we look down at the bottom, we see it's published in the Journal of Urology in 2009. Correct? A Yep. A No, I don't get it at home. Q And we see that it's authored by we've

Q You've got five authors. And it says from

Pore sizes greater than 1 millimeter.

Q

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 55 of 108 PageID #: 113741

- 1 the "Division of Surgery and Urology, Department of
- 2 Obstetrics and Gynecology, Department of Clinical
- 3 Sciences" and "Sweden." Correct?
- **4** A That is correct.
- **5** Q So these are gynecologists who are writing
- 6 on this issue of inflammatory response to transvaginal
- 7 polypropylene mesh. Correct?
- **8** A Yes, that's correct.
- **9** Q And in the purpose it says, "We
- **10** prospectively evaluated the histological inflammatory
- 11 response to the large polypropylene transvaginal mesh
- 12 used for pelvic organ prolapse surgery."
- 13 Did I read that right?
- **14** A Yes.
- 15 Q Then we go down to "Materials and Methods."
- **16** "Ten patients and 8 controls underwent vaginal punch
- 17 biopsy sampling before surgery and patients also
- **18** underwent it one year after pelvic reconstructive
- **19** surgery using polypropylene mesh. Foreign body
- 20 response to the mesh was assessed using a combination
- 21 of histological, semiguantitative and computerized
- 22 image-based analysis." Correct?
- **23** A Yes.
- 24 Q And so just to break that down just a
- 25 little bit, when we talk about ten patients, we're
 - 3584
- 1 talking about ten patients who have actually had the
- 2 polypropylene transvaginal mesh implanted inside their
- 3 bodies. Correct?
- 4 A Yes.
- **5** Q And when we talk about eight controls, are
- **6** we talking about women who have not had the mesh
- 7 implanted inside their bodies?
- **8** A I guess it is just like this, yeah.
- **9** Q So when we talk about they underwent
- 10 vaginal punch biopsy sampling, do you know what that
- **11** is?
- **12** A I don't know exactly how they did it, how deep
- **13** and --
- 14 Q Do you know what it is?
- **15** A Yeah. I can imagine.
- **16** Q So vaginal punch biopsy sampling is where
- 17 the doctors actually go into the woman, and they take a
- **18** biopsy or they pinch out a piece of the woman's own
- 19 tissue in that area. Correct?
- **20** A Yes.
- 21 Q And they did it before surgery and then
- 22 they had it done one year after pelvic reconstructive
- 23 surgery using the mesh. Correct?
- **24** A Yes.
- 25 Q So they pulled out some skin -- I'm sorry,

- 1 some tissue using the biopsy before they underwent the
- 2 surgery, and then a year later, another piece of tissue
- 3 is biopsied out of the same women. Right?
- 4 A Yeah.
- **5** Q Let's go over to Defendant's Literature
- 6 150.2. Let's go up under "Materials and Methods,"
- 7 second sentence. It says, "Ten consecutive patients
- 8 undergoing pelvic organ prolapse surgery using the
- 9 Prolift system and eight controls undergoing elective
- 10 gynecological surgery for other benign indications were
- 11 included in the study." Right?
- **12** A Yes.
- 13 Q So these ten women actually had Prolifts in
- 14 them. Correct?
- **15** A Yep.
- 16 Q And let's flip over to 150.6. And they
- 17 tell us here after taking us through all the different
- 18 mathematical values that they calculate in all their
- 19 examinations, they tell us that "The combined results
- 20 of the clinical and histological inflammatory
- 21 evaluation suggest that biocompatibility was
- 22 satisfactory."
- 23 Did I read that correctly?
- **24** A You read this correctly.
- 25 Q Jamey, if you could put back up Dr.
 - 3586
- 1 Klinge's article, Dr. Muhl and Dr. Klinge's article,
- 2 DLTB360.
- 3 Sir, so we could -- just so I fill the
- 4 chart out, what did we have for effective porosity over
- 5 here on Gynemesh/Prolift? 26 percent at rest, 0
- **6** percent at strain?
- **7** A At strain, 0. And without strain, 26 percent.
- **8** Q So we'll go with the lower number.
- **9** So we're back here kind of where we
- 10 started. And, again, sir, I don't want to dwell on the
- 11 points that we've already discussed with Dr. Muhl, but
- 12 when you tested the Prolift in 2012, you didn't test
- 13 the mesh with human tissue incorporated into it.
- 14 Correct?
- **15** A That is correct.
- **16** Q Let's go to this article at .7, 360.7.
- 17 And just to reorient, the procedure that
- 18 you outlined in this article is the procedure that you
- 19 used to test the Prolift and the Gynemesh. Correct?
- **20** A Yes.
- 21 Q So let's highlight that first sentence
- 22 there, right above the "Conclusion."
 - "Though the present technique offers a
- 24 reproducible way to objectify the porosity of flat
- 25 textile structures, it is limited to a two-dimensional

1 analysis." You did not use 500 to 600 microns. 2 Correct? You used 1,000? Did I read that correctly? 2 Α 3 Yes. 3 Yes. Because we wanted to have the scar. Q Now, sir, we're rounding the corner here. 4 And then let's go down to the last sentence 4 in that paragraph, "Furthermore, examination of I've handed you Defendant's Exhibit DLTB00026. 5 6 porosity after tissue incorporation can be measured 6 By the way, sir, when you tested the 7 only if the tissue is completely removed and the Prolift in 2012, you tested the Prolift using 1,000 textile is kept perfectly flat." 8 microns, and you tested the DynaMesh at 600 microns. 9 Did I read that correctly? 9 Correct? 10 Α Yeah. 10 Α Because it's a PVDF, it's another material. Q 11 So 1,000 for one and 600 for the other. 11 And now let's go to the first page of the 12 article, point 1 in the abstract, last sentence. 12 Right? Α And you told us, sir, when you came up with 13 Yeah. 13 Q this protocol in 2007 that "Further in vivo studies" --14 Now, sir, I've handed you an article called 14 15 And those are studies inside the human 15 "Classification of biomaterials and their related body. Right? 16 complications in abdominal wall hernia surgery." 16 17 Α Yes. 17 And let's go up to the very top. Q "Further in vivo studies have to 18 18 Sir, I think you told us this was the very first edition of Hernia. Right? 19 investigate whether the preservation of a high 19 effective porosity under stress may help to improve 20 20 I guess, yeah, it was number one. biocompatibility of textile implants." 21 Yeah, this was number one. 21 22 Did I read that correctly? 22 Α Yeah. Α Q And Hernia is -- I mean, it's a big 23 Yes. 23 24 Q And, sir, let's move to 360.3 in the deal in -- it's a big deal for hernia surgeons. I 24 article, toward the bottom under "Porosity 25 mean, it's not light reading for the rest of us, but 25 3588 determination." 1 hernia surgeons, this is a big article, I mean, it's a 2 Sir, you told us there in your article in big publication, Hernia? Let me phrase -- no, no. Let 3 2007 that pore sizes that prevent any bridging effect 3 me phrase it another way. but permit ingrowth of physiological tissue should It's an important journal to hernia 4 4 exceed a distance of 1,000 microns, that's that 1 5 5 surgeons? millimeter we've been talking about, between two Α Meanwhile, yeah. They started there. 6 6 polypropylene filaments. Correct? 7 7 So let's scroll up a little bit. 8 A Yes. 8 And this is authored by Prof. Amid. 9 So, sir, you also told us later on in this 9 Correct? article, page 360.5, right in the middle, "Pore sizes 10 Α Yes. 10 of greater than 500 to 600 microns permit ingrowth of 11 Q 11 And you talked about Prof. Amid earlier 12 soft tissue, and pore sizes of greater than 200 to 300 12 today. Correct? favor neovascularization." Right? 13 Α Yes. 13 Α 14 Yes. 14 Q Let's scroll up just a little bit more. The ingrowth of blood vessels. Right? 15 And what Prof. Amid was concerned with in 15 Neovascularization is the ingrowth of blood this article was classifying biomaterials, i.e., meshes 16 16 among other things, and their related complications in 17 17

vessels and of soft tissue with scar. Scar and soft tissue as well. 18 19 When you tested the Prolift in 2012, you tested it at 1,000 microns. Right? In other words, 20 when you tested the effective porosity, you used 1,000 21 22 microns? Α 23 1,000 microns, yes.

24 That's 1 millimeter? Yes. 25 Α

Let me give it to you a different way. 25 Q

totally macroporous prostheses" --

That is correct.

abdominal wall hernia surgery. Correct?

So we see down here for type I, "Type I are

And macroporous, we talked about that

earlier, those are the large pore fabrics. Correct?

You have to decide what is large pore.

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 57 of 108 PageID #: 113743 1 Macroporous meshes have larger pores than Or at least I refer to it as Deprest, because the first 2 microporous meshes? author is Deprest. Correct? Α Α Yes. 3 That is okay. 3 4 Q 4 There we go. And as you can see right here, "Center for 5 Surgical Technologies, Faculty of Medicine, Department Totally macroporous prostheses, and that's 5 6 prostheses is just another word for -of Obstetrics and Gynecology" in Belgium. Correct? 7 Α 7 Α Mesh. Yes. O Q 8 -- mesh. Riaht? 8 And so these are pelvic floor surgeons --Α Α 9 Yes. 9 Yes. So we all know. 10 Such as Atrium, Marlex, Prolene and Trelex. 10 Q -- in Belgium discussing synthetic and And I think Atrium, Marlex and Prolene were 11 biodegradable prostheses in pelvic floor surgery. 11 12 ones you put in some of your patients. Right? 12 Correct? Α 13 Α Yes. 13 Yes. Q Q "These prostheses contain pores larger than 14 14 We've got one, and I think one of them 75 microns." Correct? might be a pathologist, but a pathologist is still --15 15 Α Yes. 16 they're still a doctor, aren't they? At least over 16 17 Q When we talk about 75 microns, I had to 17 here in the United States they're a medical doctor. 18 struggle with this, that's why I keep repeating myself, 18 Are pathologists in Belgium also a medical doctor? 19 pore sizes that are greater of 1 millimeter, that's 19 I would guess. I'm not certain, but I guess. 20 20 1,000 microns. Right? We've got one, two, three, four, five, six, Α Yes. 21 21 seven, eight, nine medical doctors. Correct? 22 Q So when we talk about 75 microns, we're 22 Α I cannot control it for everyone, but I guess. 23 talking about something that's less than 10 percent of 23 And we're talking 2005. Right? That's the that 1 millimeter. Correct? 75 microns -year Prolift comes on the market. Right? 24 24 25 Α 25 Α Yes. Yes. 3592 3594 Q 1 "These prostheses contain pores larger than And let's go to page 139.4, last sentence. 1 750 microns, which is the required pore size for "And these pelvic floor surgeons tell us pore sizes of 2 3 admission of macrophages." Correct? 3 greater than 75 microns allow for rapid ingrowth of Α 4 Yep. fibroblasts and vascular elements necessary to anchor Q 5 "Fibroblasts"? 5 the implant within the native tissue." Α 6 Yep. 6 Did I read that correctly? "Fibroplasia, blood vessels, angiogenesis You read this correctly. 7 7 8 and collagen fibers into the pores." And then it says, 8 And then, sir, and I promise you we're 9 "Bobyn, et al., 1982." 9 getting close to the end here, I'm handing you another article. The one I just showed you -- the one up on 10 And that would be an article published by 10 Bobyn in 1982. That's what it's talking about there. the board is 2005. Now we're going to 2006, one year 11 11 12 Right? 12 later. Jamey, let's put up DLTB00140. Α 13 13 You're right. And here we see Deprest again. Correct? 14 Q And then White in 1988. Correct? That's 14 Α Yes. another article? 15 Q 15 And, sir, we see Deprest, Fang Zheng, et Α cetera. We see -- these are a number of physicians. Yep. 16 Q And then White, et al. in 1981. Correct? 17 And I compared -- so Deprest has basically got an

16 17

Α Yes.

18

19 And then, sir, handing you DLTB00139,

20 "Synthetic and biodegradable prostheses in pelvic floor

21 surgery." 22

You've seen this article, certainly, sir,

haven't you, sir? 23

24 Α Yes.

Q 25 And this is the Deprest article. Correct? 19 Α Yes. Q 20 And I compared the authors of the two, and

article in 2005 and an article in 2006. Correct?

21 there's some overlap, but I think, what did we count, 22 nine on the first one and then I think there are a

23 couple more over here on the 2006 article that are not 24 also co-authors on the 2005 article. I mean, I may

25 have my numbers off, but I think it's somewhere around

55 of 106 sheets Page 3591 to 3594 of 3681 02/04/2013 11:51:09 PM

1 11 total medical doctors between the two articles, 2 maybe 12. Okay? 3 And we see, sir -- Jamey, why don't you take down the one on the left. There you go. 4 5 "The biology behind fascial defects and the 6 use of implants in pelvic organ prolapse repair." 7 Correct? Correct, sir? 8 Yes. 9 Q And then let's go to page 140.3. And kind 10 of go toward the bottom. Pick up right there with that sentence beginning with "Pore." 11 12 It says, "Pore size is also an important factor for fibroblast infiltration, flexibility and 13 mechanical integration. Pore sizes of greater than 14 75 microns allow for rapid ingrowth of fibroblasts and 15 vascular elements necessary to anchor the implant 16 17 within the native tissue." 18 Did I read that correctly? 19 Α Yes, you read it correct. 20 Sir, Defendant's Exhibit DLTB00261. The title of this article is, "Modified classification of 21 22 surgical meshes for hernia repair based on the analyses 23 of 1,000 explanted meshes." Correct? Α Yes. 24 25 Q And the lead author is Dr. Klinge. 3596 Correct? 1 2 Α Yes. 3 And it's published -- it was accepted April 2012 and it was published in May of 2012. Correct? 4 Α 5 Yep. 6 Sir, if you would, look with me, page 7 261.6. That paragraph there, Jamey, that begins 8 "Furthermore," about halfway down. 9 It says, "However" -- and these are your 10 words. Correct, Dr. Klinge? Α What? 11 12 Q These are your words? 13 Α Yeah. 14 Q "However, it is still open for further studies whether 500 microns is a reliable limit for 15 histology and 1,000 microns for the calculation of the 16 17 effective porosity or whether this should be modified." Α Yes. 18 Q 19 Did I read that right? Α Correct. 20 21 "Though a standardized measurement of the 22 effective porosity that considers only large pores with

sufficient geometry to avoid bridging may best provide

a qualitative criterion to differentiate these two

groups, it may be speculated" --

23

24

1 Α Yes. 2 Q -- "whether the assumption of a best pore size of 1,000 microns for preserving an effective porosity has to be adjusted." Correct? 4 5 That is correct. 6 MR. GAGE: Nothing further, Your Honor. 7 8 REDIRECT EXAMINATION 9 10 BY MR. ANDERSON: 11 Q Dr. Klinge, let's actually start right 12 where he ended off. 13 This 1,000 explant classification, what was 14 the purpose of this being done in Europe for hernia --15 for a hernia registry? Explain that hernia registry. 16 From the European Hernia Society, we were asked to build up a registry to get better information, what 17 18 is the outcome of the patients after hernia repair. We 19 all have learned that clinical studies usually have 20 strict limitations, and, therefore, it was -- the task 21 was to build up an international registry. And for 22 this registry, we need some information. We want to 23 put in which material has been used. Meanwhile, more 24 than 220 different mesh materials are used by hernia 25 surgeons. And if you place just a name in this 3598 registry, it will be hardly possible to get any 1 feedback what is the impact of the clinical outcome. 3 And, therefore, we want to have a grouping of these mesh materials so that we can make a better 5 interpretation of these data. 6 And there, in this field, we categorized 7 two different groups, the so-called small pore meshes 8 and the large pore meshes. And we made it in 9 cooperation with all major manufacturers in Germany, 10 because they wanted to have a classification or a 11 grouping as well. 12 Let me stop you right there. 13 And one of those manufacturers was Ethicon. 14 Correct? Α 15 Yes. 16 And as part of this regrouping and 17 reclassification of hernia meshes, your work regarding 18 1,000 microns was listed as one of the ways to classify 19 the meshes that come into this registry in Europe. 20 Correct? 21 Α Yes. Q And so Ethicon signed off on the registry 22 23 and the manner in which you set it up for the European

24

Α

Hernia Society. Correct?

They agreed to this grouping.

	3599		3001
1	Q Also listed within this article that was	1	to say, great job on this reclassification after he's
2	just shown to you about the 1,000 explants, this is	2	opened the door. Absolutely relevant.
3	actually the testing that you and Muhl have done and	3	I was going to read the first two
4	that the jury has seen. Correct?	4	paragraphs actually, just the first line of the
5	A Yes.	5	second paragraph. First paragraph and the first line
6	Q Showing how you can measure effective	6	of the second.
7	porosity by looking at these 1,000-micron pores.	7	MR. GAGE: And, Your Honor, you understand
8	Correct?	8	my objection.
9	A Yes.	9	THE COURT: The objection is sustained.
10	Q And the importance of having these	10	It's hearsay.
11	1,000-micron pores is also listed in this article,	11	
12	isn't it?	12	(The sidebar ended.)
13	A Yeah. We applied this grouping then to these	13	
14	1,000 explants. And it is clearly can clearly be	14	BY MR. ANDERSON:
15	seen that the mound of inflammation and connective	15	Q Just so the jury understands, this 1,000
16	tissue means scar formation is higher in the small pore	16	explant study, how many years of explants and by
17	group meshes than in the large pore group meshes. And,	17	explants, we're talking about tissue that has been
	therefore, if we want to have a grouping that predicts		
18 19	a little bit the outcome, we feel comfortable to focus	18 19	taken out of hernia surgery and has been evaluated histopathologically by you and Dr. Klosterhalfen.
			Correct?
20	on these pore sizes.	20	
21	Q And Ethicon is a signatory, they signed off	21	
22	as one of the manufacturers agreeing to this	22	materials soon after 2000.
23	classification and this grouping of meshes in the	23	Q And you published this in 2012. Correct?
24	registry. Correct?	24	A This evaluation of these 1,000. But in between,
25	A They agreed to this.	25	we have preliminary reports of a group of them.
	3600	_	3602
1	Q Put up Plaintiff's 0689 if you would,	1	Q So 12 years of 1,000 explants that came
2	please, PLT0689.	2	from human beings that you actually looked at, and you
3	MR. GAGE: Your Honor, may we approach?	3	looked at various factors on those. Correct?
4		4	A Yes.
5	(The following occurred at sidebar:)	5	Q And pore size was one of them. Correct?
6	MR. GAGE: Your Honor, this is a letter to	6	A Pore size was one of it, proliferation and
7	the editor, and	7	collagen deposition and
8	THE COURT: I usually in these cases, I	8	Q And after looking at 1,000 explants, did it
9	haven't allowed letters to the editor.	9	confirm your findings that once the fibers in these
10	MR. ANDERSON: I purposely did not bring up	10	explants were greater than 1 millimeter but
11	the 1,000 explants because I didn't want to go here.	11	MR. GAGE: Objection, leading.
12	He raised it and he put it up as the last exhibit. And	12	MR. ANDERSON: I'll withdraw it.
13	so I wanted to show that their colleagues have thanked	13	BY MR. ANDERSON:
14	them for doing this important work.	14	Q Did this paper confirm any of your
15	MR. GAGE: Your Honor, just for the record,	15	findings, earlier findings, regarding 1 millimeter is
16	my objection is that it's hearsay because it's a letter	16	required for fatty tissue ingrowth?
17	to the editor and it's not peer reviewed and it doesn't	17	A It is clear that the larger pores are have

- 1 this as a critical cutoff. 2 Q And was there ever a statement by Prof. 3 Amid in response to this reclassification of hernia meshes? 4 5 MR. GAGE: Objection. 6 THE WITNESS: When he got aware of this, he 7 sent an e-mail with a congratulations. 8 MR. GAGE: Objection, Your Honor. 9 THE COURT: The objection is sustained as 10 to what Dr. Amid's response was. It was a hearsay e-mail as opposed to something the doctor published. 11 12 MR. ANDERSON: That's fine. 13 BY MR. ANDERSON: Q You were just shown an article by Jan 14 Deprest. And what was read to you is, "Pore size is 15 also an important factor for fibroblast infiltration, 16 17 flexibility and mechanical integration." 18 Now, I want to clear this up, because there was 75 microns, 1,000 microns and 1 millimeter. And I 19 20 want to clear this up for the jury, if we could, 21 please. 22 What happens --23 MR. ANDERSON: Do you mind if I use your 24 paper? 25 MR. GAGE: No. 3604 1
 - MR. ANDERSON: Thank you.

2 BY MR. ANDERSON: 3 What happens -- what types of cells can go into a small pore that has 75 microns? 4 5 Α So most of the local cells, inflammatory cells,

are in a range of 5 to 7 microns. So you can choose 6 7 whether -- yeah. 5 -- 15 of these cells can go

8 parallel into these microns.

9 So if the mesh has holes that are only 10 75 microns, can any new tissue ingrowth occur?

It depends what is the definition of a tissue. 11

12 Q Thank you.

13 What type of tissue can grow in at

14 75 microns?

You always will find that there are some 15

macrophages in combination with some fibroblasts. No 16 17 one will object to this.

Q Fibroblasts meaning scarring? 18

19 Α

20 O So at 75 microns in the pore, we still have

scar. Correct? 21

Α Yes. 22

23 Then the next thing he read to you was,

24 "Peak ingrowth is reached at pore size around 400 to

500 microns." Correct?

1 Yeah.

2 Q What can grow into the pore at 400 to

500 microns? What type of cells, if that is laying in

a human tissue, and these are the size of the mesh

5 hole?

6 Α This limit usually is taken -- if you have some

tissue ingrowth, you need some vessels for providing

8 the blood supply in it. And it was generally accepted

9 that you need a pore size of this diameter so that

10 pore -- that vessels are growing in and providing these

11 cells with blood. If the pores are smaller, you don't

12 have this ingrowth of the vessels. So this is a cutoff

13 for -- that you see ingrowth of vessels.

14 Q So you can get some vessels?

15 Α Yes.

16 Q Will you get new fatty tissue ingrowth that

17 we want for the implant to remain flexible?

18 No. We didn't see it -- we didn't saw it in

19 these small pores.

> Q And you called fat tissue good tissue.

21 Correct?

20

22 Α Fat tissue is good tissue, because it means that

23 it is -- yeah. It is not replaced by scar tissue.

24 So at 75 microns, you can get a few

25 macrophages, and that's just our body's white blood

3606

cells, to eat some tiny bacteria. Correct? 1

2 Α Macrophages, few fibroblasts, so -- but there is

3 only room for 10, 15 cells in a row.

Correct. So when the hole gets bigger to 4

5 400 to 500 microns, you can get some vessels, but no

6 fat. I don't write as good as Will.

7 No fat, still no good tissue. Correct?

8 Α We don't see any fat there.

9 Then what wasn't read to you from this

10 article, I would like to, which says, after the

11 sentence, "Peak ingrowth is reached at pore size around

12 400 to 500 microns."

13 And that would be ingrowth of scar tissue.

14 Correct? Ingrowth of scar tissue?

15 Α Yep.

16 Right. So when they're talking tissue 17 ingrowth, they're not talking good tissue ingrowth,

18 they're talking bad tissue ingrowth. Correct?

19 They don't differentiate it.

Right. So then larger pores -- after that

21 it says, "Larger pores limit the fibrosis process to

the perifilament region." 22

That was those pictures we saw with the

24 little dots around the side. Correct?

Α 25 That is --

20

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 61 of 108 PageID #: 113747

- 1 Q And if they were far enough away, we would 2 have a good fat in it, but if we had these three
- 3 together, like we saw in multiple things, it would get
- **4** a scar plate. Correct?
- 5 A So they are absolutely in line with our6 conception.
- **7** Q So when it says, "Larger pores limit the
- ${\bf 8}\quad \mbox{fibrosis} \mbox{ process to the perifilament region, the pores}$
- 9 get filled with fat."
- **10** Did you see that in the article?
- **11** A Yeah. I --
- 12 Q The reference is number 38. That was not
- 13 read to you either from this Jan Deprest article.
- 14 Let's look and see what reference 38 is
- **15** regarding larger pores.
- **16** A I'm lost.
- 17 Q I've got you. I'll show it to you.
- **18** MR. ANDERSON: May I approach, Your Honor?
- **19** THE COURT: Uh-huh.
- 20 BY MR. ANDERSON:
- **21** Q Do you see 38?
- 22 A Klinge, Klosterhalfen, Birkenhauer. It's our
- 23 publication in 2002.
- 24 Q Is that one of the articles that we went
- 25 through with the jury at the earlier part of this day?
- 1 A Exactly.
- **2** Q And is that the one where you first
- 3 reported that in order to get large porous -- in order
- 4 to get fat tissue, good tissue to grow in, that you
- 5 needed --
- 6 A Yes.
- **7** Q -- greater than 1 millimeter?
- 8 A Yes.
- **9** Q So it's not until you get to 1,000 microns;
- 10 is this correct, sir?
- **11** A Yes.
- 12 Q It's not till you get to 1,000 microns, Dr.
- 13 Klinge, that you actually get good tissue. Correct?
- **14** A Exactly.
- **15** Q He was showing you that Amid
- 16 classification. If we took and went off the chart this
- 17 way, that's where Dr. Amid's classification would be.
- **18** Correct?
- **19** A Yes.
- 20 Q And that was before there were lighter
- 21 weight, larger pore meshes. Correct?
- **22** A At that time, there haven't been any.
- 23 Q His classification was only for
- 24 heavyweight, small pore meshes. Correct?
- **25** A Yes.

- 1 Q Because they didn't have lightweight, large
- 2 pore meshes at the time, did they?
- **3** A No, they didn't.
- 4 Q Not until the next year when you came out
- 5 with the lightweight, large pore concept that they
- 6 helped you develop. Correct?
- **7** MR. GAGE: Objection, leading.
- **8** THE WITNESS: That is correct.
- **9** THE COURT: The objection is overruled.
- 10 THE WITNESS: In December I talked to --
- 11 BY MR. ANDERSON:
- **12** Q No question pending. It's okay.
- 13 Did you want to say something about that?
- **14** A No.
- 15 Q Okay. Defense counsel also showed you the
- **16** Muhl article, and he read you some very similar things.
- 17 He said, "Pore sizes of 500 to 600 microns permit
- **18** ingrowth of soft tissue."
- 19 And then he said, you didn't test -- you
- 20 didn't test the Prolift at 1,000 -- at 500 to 600, you
- 21 tested it at 1,000.
- 22 Do you remember that part of your
- 23 testimony?
- **24** A Yes, yes.
- 25 Q Why did you test it at 1,000 and not 500 to
 - 3610

1 600?

- **2** A We wanted to identify the area where we don't
- 3 have this scar, because in some patients, the scar is a
- 4 problem, and, therefore, we want to identify what is a
- 5 risk of a device to initiate scar tissue. And
- 6 therefore, we took the cutoff of 1,000.
- **7** Q And that's for polypropylene. Correct?
- **8** A That's for polypropylene.
- **9** Q And then he pointed out that you used a
- 10 different standard for the DynaMesh?
- **11** A Yes.
- **12** Q Why did you use a different one for
- 13 DynaMesh?
- **14** A We -- it was another polymer. We started to work
- **15** on it in 1998.
- 16 Q What's that made out of?
- **17** A It's polyvinylidene fluoride.
- **18** Q Called PVDF?
- 19 A PVDF. It has two fluorine atoms added a little
- 20 bit more hydroflow but is said to be more stable. And
- 21 in our first experience, we saw that the foreign body
- 22 reaction, this infiltrate and the fibrosis, that this
- 23 area is smaller with the PVDF than with the
- 24 polypropylene.
- **25** Q So in other words, the tissue, you have a

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 62 of 108 PageID #: 113748

- **1** greater inflammatory response to polypropylene meshes
- than you do to PVDF meshes. Correct?
- **3** A In comparison to PVDF. And, therefore, for the
- 4 PVDF, the pores can be smaller to prevent this scarring
- 5 integration.
- **6** Q The jury has heard a little bit about
- 7 Project Thunder. Project Thunder was the project that
- 8 Ethicon was looking at as one of the alternatives to
- 9 replace Gynemesh PS. Do you recall that?
- **10** A Yes, yes.
- 11 Q Project Lightning was something they were
- 12 looking at to replace Gynemesh PS, and that was
- **13** Prolift+M. Is that your understanding?
- **14** A Yes.
- 15 Q And then they were also looking at Project
- 16 Thunder, Correct?
- **17** A Yes.
- 18 Q The material they were looking at in
- 19 Project Thunder was PVDF, wasn't it?
- **20** A Yes, yes, exactly.
- 21 Q You helped do some of those studies.
- 22 Correct?
- **23** A Yes.
- 24 Q In fact, who provided you the PVDF samples
- 25 when you did your first comparison to PVDF versus
 - 3612

- 1 polypropylene?
- **2** A The first PVDF mesh came from Ethicon.
- **3** Q Before I go into the Thunder document, you,
- 4 in that 1,000 explant article that we were looking at,
- **5** it said that the 1,000 microns could be speculative.
- 6 You didn't get a chance to explain that. Please
- 7 explain that to the jury.
- **8** A We made -- or there is some data that
- **9** 1,000 microns are the cutoff, but it is possible that
- 10 if you have additional surgical trauma to this, that
- 11 this limit of 1,000 is maybe not the best to
- 12 differentiate good meshes from the bad meshes. And,
- 13 therefore, we offer or we said in this manuscript that
- 14 you have to study it further on. We made -- we have
- 15 some evidence that the cutoff is about 1,000, but there
- 16 may be some other conditions where this may be
- 17 modified. But this has to be done, and we offer --
- 18 and, therefore, we published it because we offered this
- 19 as a technology for everyone, for every manufacturer to
- 20 work on this.
- 21 Q Thank you for explaining that.
- 22 Can we go to Plaintiff's 1664?
- 23 We were talking about Project Thunder and
- 24 Project Lightning. Correct?
- **25** A Yes.

- 1 Q Could you please go back to Plaintiff's --
- 2 the slide 50 on that, please, the very last one.
- 3 Look at the top there. "Lightning." They
- 4 said that they could "maybe have that in 12 months or
- 5 less. It's a quick hit, modification to our existing
- 6 product, likely naked Ultrapro."
- 7 That would be once the Monocryl sutures
- 8 absorbed and it would actually have large pores.
- 9 Correct?
- **10** A That is simply taking a hernia mesh and placing
- 11 it again in the pelvic floor.
- 12 Q But the Ultrapro pores were 4 to
- 13 5 millimeters. Correct?
- **14** A Yes. Rather large pores.
- 15 Q They didn't have those bars running through
- **16** them, did they?
- **17** A No, they didn't.
- 18 Q And it was almost half the weight of
- 19 Gynemesh PS. Correct?
- **20** A Yes, yes.
- 21 Q So if you're looking for a lighter weight,
- 22 larger pore mesh than Gynemesh PS, they had it?
- 23 A They had it. And Ultrapro is the most often used
- 24 mesh for hernia surgery.
- **25** Q And if you go to the final -- keep that up.
 - 3614
- **1** Take the bottom bullet point, please.
- 2 But Project Thunder was going to take a
- 3 little longer. "The holy grail of pelvic floor repair
- 4 meshes, a new weave, matched to the tissue properties
- **5** of native tissue."
- 6 Do you see that?
- **7** A Yes.
- 8 Q And we saw the slide earlier that said
- 9 there was no patient-centric graft material?
- **10** A Yes.
- 11 Q And that's why they were looking at this?
- **12** A Yes, exactly.
- 13 Q Is this what you were telling the jury
- 14 earlier about that you need to look at the
- **15** physiological requirements of the area of the body
- 16 where you're going to place mesh?
- 17 A Yeah. This is in line with this. But it
- 18 obviously takes three years or four years to develop
- **19** this.
- 20 Q And how long did it take to develop, for
- 21 instance, Vypro hernia?
- **22** A Vypro was ready within three years.
 - Q And Ultrapro was how long?
- **24** A It was about five years.
- **25** Q So if this was going to be the holy grail

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 63 of 108 PageID #: 113749

- 1 of pelvic floor repair mesh materials and they knew
- 2 they had a problem with Gynemesh PS, does this apply to
- **3** what you said earlier, stop and study?
- **4** A Yeah. It's a good -- perfect option.
- **5** Q And this was going to be made out of the
- 6 PVDF that had less inflammatory response according to
- 7 your studies?
- **8** A This is completely in line with what we said.
- **9** Q But did you see the documents in Ethicon's
- 10 documents where they said that they killed Project
- 11 Thunder? Correct?
- **12** A Yes.
- 13 Q You were asked some questions about Prof.
- 14 Muhl's testing with the DynaMesh versus the Gynemesh
- 15 PS. Correct?
- **16** A Yes.
- 17 Q That we did for this litigation and for the
- **18** jury?
- **19** A Yes.
- **20** When you put 3 pounds of force or placed on
- 21 the Gynemesh PS, did it curl and rope and bend?
- **22** A Yes.
- **23** Q No. On the -- I'm sorry. On the Gynemesh.
- **24** A On the Gynemesh, yes.
- **25** Q On the Gynemesh, we saw how when you put 1
 - 3616
 - to 3 pounds of force, that it pulled it and there were
- 2 pore deformation. Correct?
- 3 A Yes.

1

- 4 Q Did that happen to the DynaMesh that's made
- 5 out of PVDF?
- **6** A No, it did not, but it was intended not to do
- 7 this, so it --
- 8 Q Do you mean DynaMesh was made not to do
- 9 this?
- **10** A Yes. It was the purpose not to show this
- 11 collapse of pores when there is some strain to it.
- 12 Q So you -- and DynaMesh has arms like
- **13** Gynemesh. Correct?
- **14** A No. The arms were specifically or were made in a
- 15 standard way. In the Gynemesh, the arms, it was just
- 16 cut off a huge piece of a larger mesh. And if you are
- 17 looking to the arms, they are looking quite different
- **18** at every centimeter. So it will be hardly possible to
- **19** define any property of these arms, because sometimes
- 20 the filaments are running like this, sometimes like
- 21 this. So always different flexibility, stretchability,
- 22 so -- and in the DynaMesh, it is made very strict and
- 23 very standardized. But it was by intention again.
- Q So DynaMesh, PVDF, did you see in the
- 25 Ethicon documents where they indicated what they wanted

- 1 was a scar net, not a scar plate, that was the design
- **2** intent of Gynemesh PS?
- **3** A Yes, yes, yes.
- **4** Q From your review and all of the work that
- 5 you've done, were they able to achieve just a scar net,
- 6 or does Gynemesh PS turn into a scar plate?
- **7** A No, they were not able to produce this. And I
- 8 never, ever -- well, I not ever saw the data that they
- 9 tried it, to make these modifications. What happens if
- 10 the pore size is increased by 30 percent? If there --
- 11 one of these crossing bars is removed, what happens?
- 12 All these data, I didn't find it.
- 13 Q For the DynaMesh made out of PVDF, is this
- **14** the construction, regular-sized pores in squares?
- 15 A Roughly, but --
- **16** Q And when you put 3 pounds of weight, it
- **17** doesn't lose its structure, did it, in your testing?
- **18** A Yes. It is intended to have this high structural
- 19 stability, because it is intended to be placed in an
- 20 area where a mechanical strain is applied.
 - Q But the Gynemesh PS has bars running all
- 22 through it here, here, here, here. Correct?
- 23 A Yes.

21

- 24 Q It has four bars running through each pore.
- 25 Correct?

- **1** A Yes.
- **2** Q And when it's put to the test on 3 pounds,
- 3 what happens to it?
- **4** A Yeah. The pores collapse. But, therefore, we
- 5 have a big institute for textile engineering because
- 6 it's a science. There are people who are studying it,
- 7 not the surgeons. So I have to admit, there is my
- 8 limit. I just have to go to them and ask them how to
- 9 realize what is necessary.
- 10 Q You were shown some results from a
- 11 polypropylene study that you did. And although the
- 12 pore design was not named, defense counsel said, well,
- 13 isn't this -- doesn't this look like --
- 14 MR. ANDERSON: I can approach, please, Your
- 15 Honor?
- 16 THE COURT: You can.
- 17 BY MR. ANDERSON:
- 18 Q Doesn't this look like Gynemesh PS? In
- 19 fact, it's only got one bar running through the middle
- 20 of the pore, doesn't it?
- **21** A Therefore, it is similar, but I'm not sure.
- 22 Q It's not the same, it doesn't have four
- 23 bars running through it, does it?
- **24** A Yes, you're right. You're right.
- **25** Q You told the jury before if it has four

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 64 of 108 PageID #: 1137 1 1 bars running through it, it brings the inflammation Q And in this study he showed you some into the pores. Correct? 2 2 titanium polypropylene, about biocompatibility. Α 3 Yes. 3 Correct? Q Α 4 It will have a greater inflammatory 4 Yes. response? 5 5 One thing that wasn't read to you, 6 Α Yes. "However, there are no data available analyzing the 6 7 Q Fibrotic bridging? pure effect of titanium coating on biocompatibility in 8 Α Yes. the in vivo situation." Correct? 8 Α 9 Q 9 Yes. Scar plates? 10 Α Yes. 10 Q So they don't know what it's going to do in Q 11 a human being. Correct? 11 Shrinkage? 12 Α Of course. 12 No. It's one of the studies to investigate, to Q 13 13 Patient complications? study it. Α 14 Yes. 14 You were also shown a PTFE study comparing 15 Q This here, it's dense. This was shown to 15 Optilene LP. Do you remember that? Α you and put on the screen. Do you remember that? 16 Yes. 16 17 Α Yes. 17 Q What's a better indicator as to whether or Q 18 And they drew a line over here and said, 18 not a mesh is going to be safely implanted in a woman's 19 well, this is 2.5 millimeters and this is 19 pelvic tissue the rest of her life? Clinical results 20 1.75 millimeters. So we've got a big pore. Do you 20 or what it looks like in a pig after three months? 21 21 remember that? The most important aspect whether a mesh is a 22 Α Yes. 22 good mesh or a bad mesh, of course, are the clinical 23 Q In that big pore, they have all kinds of 23 results. But to predict this in the -- if you want to fibers and lines running through it that you told the make a development of the best meshes, we have to go to 24 24 jury before would bring fibrosis into that pore. 25 preclinical tests. And these will help us to find the 25 3620 Correct? 1 best solution, but the most important thing is whether 2 Α Yeah. it really works or not. So if you have good 3 Q Did you read the testimony of Dan Burkley, 3 experiments and it doesn't work because you have some 4 the porosity tester for Ethicon? patients with complaints, it will not help. Α 5 We have shown it. 5 And, therefore, the most critical question Q 6 And you've read his deposition. Correct? is if there is someone coming with shrinkage and 6 7 Α Yep. 7 contraction, regardless how often it is, could it have 8 Q Do you recall he said he has no idea where 8 been avoided, yes or not? Did we do all our best to 9 those numbers came from that you see here? avoid these problems with the scar is sufficient 10 10 MR. GAGE: Objection, Your Honor. studying of this phenomenon. And this is the most 11 important thing. And all the other things are 11 THE WITNESS: Yes. 12 THE COURT: The objection is sustained. 12 attempted just to help. 13 13 The jury should disregard the last answer unless you You had some questions about this Jan 14 intend to play it for the jury. 14 Deprest article, about synthetic implants and that BY MR. ANDERSON: 15 15 these knitted structures showed various degrees of 16 inflammatory response. 16 You were shown this by defense counsel, one 17 of the many hernia articles that he showed you. 17 Do you remember seeing this article? 18 18 Let me ask you this. Any of your hernia Yes, I've seen that. I mean, some way, yeah. 19 articles and any of the ones he showed you, in any of 19 Q I want to read to you what defense counsel didn't read. 20 them did you say that Gynemesh PS would be safe in a 20 21 21 woman's pelvis? "These foreign materials induce first an 22 Α No. 22 acute inflammatory reaction which in the case of

3622

Yes. 25 Do you agree with that? 02/04/2013 11:51:09 PM Page 3619 to 3622 of 3681 62 of 106 sheets

23

24

reaction and fibrosis."

permanent materials transits to a chronic inflammatory

Q

Correct?

Most all these articles are hernia.

23

24

25 Α

Case 2:12-md-02327 Document 2960-8 Filed 10/12/16 Page 65 of 108 PageID #: 1137

1 Α Yes, totally. I met Jan Deprest in December in 1 No, I didn't see any data or any studies where 2 2 Cologne, and he -- there is no conflict in our opinions this was in the focus of the project. 3 about this cutoff. And he's going to switch to PVDF. 3 So Michel Cosson, he believes that the mesh 4 The cutoff, you mean 1 millimeter? in place is no problem for a roll-up. 4 5 Α 5 Of course, he doesn't have the arms going Yes. So large pore is accepted by him as well. 6 And you were shown your lightweight, large through his groin, does he? 6 7 7 pore concept article. Correct? MR. GAGE: Objection. 8 Α 8 THE COURT: That is argumentative and that Yes. 9 Q 9 question is stricken. The jury should disregard it. This sentence was read to you. 10 "Bridging occurs in all mesh modifications 10 BY MR. ANDERSON: 11 Q 11 with a granuloma size around each fiber exceeding more The point is that Ethicon did get e-mails, 12 than half the pore size," and then defense counsel 12 as we saw earlier from Dr. Eberhard, where she 13 stopped. The next sentence says, "Usually the 13 indicated that the patients were feeling it in their 14 phenomenon of bridging is observed in all mesh 14 tissue. Correct? modifications with a pore size of less than 1 15 Α Yes. And this is the classical situation where 15 millimeter." you have conflicting results, and then you have to 16 16 17 Further confirmation of what we've been 17 study it. Otherwise, I don't know how you can get a 18 telling the jury here today? 18 good solution. 19 Α Yes. 19 You were shown an article about pelvic Q 20 20 organ prolapse, Prolift system that was in 75 patients. Defense counsel showed you this e-mail from 21 Michel Cosson to this Josh Samon. And he read to you, 21 Do you recall that? 22 "Is it critical that mesh straps lay flat in the 22 Α Yes. 23 channel or is it okay to be rolled up?" And then he 23 Q What will this data tell you from 75 says, "Cosson," Dr. Cosson says, "if the mesh is in patients? 24 24 25 Α 25 place, there is no problem for a roll-up." So there are a lot of data with patients, 15, 20 3624 3626 1 Do you remember that? 1 patients, 100 patients. And all these clinical trials 2 Α Yes. help to find out whether there are some complications, 3 Q And you said something at the end of that 3 but they usually have not sufficient statistical power about class level 5? 4 to say any more, to say what is the safety of these --Α 5 Yes. of this device. And, therefore, the value of these 5 6 Can you explain to the jury what you were 6 clinical trials is too low to say, okay, you made an 7 trying to talk about right there? 7 evaluation and that is reality. 8 Α So we have certain degrees of the way we classify 8 And what wasn't read to you, I want to read 9 the evidence, what is the highest evidence, what gives 9 to you now and see if you agree. 10 10 us the best security that it is reliable advice. So "Numerous studies have reported on 11 11 there is a grading of the evidence from 1 to 5. And 5 short-term outcomes" --12 is the expert opinion. So if someone is standing up 12 MR. GAGE: Objection, Your Honor, I was not 13 13 and said, okay, it's like this, without showing any allowed to go into this. 14 data or any studies and so on, and this is, of course, 14 MR. ANDERSON: Certainly was. the lowest level of evidence. So if you --15 15 THE COURT: Well, let's approach. Q 16 Opinion versus data, is that what you're 16 17 saying? 17 (The following occurred at sidebar:) 18 18 Α Yes, yes, exactly. MR. ANDERSON: I showed the other thing 19 Q Did you see any data --19 that he went into. He showed Milani, he showed the Α 20 20 No. cover of it, he read the abstract. And then he went to 21 21 Q -- after this where Ethicon actually looked the numbers. And after he had gone through the numbers 22 at data, meaning performed studies, so that they could 22 for a long time, we finally said, Your Honor, he's 23 look at what would happen with this rolling up while getting too deep into the numbers and so he was able to 23 24 going through a woman's groin and through her buttocks? 24 say Ultrapro was bigger than the other. But he was

25

allowed to read this entire thing, but he chose not to

25

Did you ever see any of that?

	3027		3029
1	read that.	1	BY MR. ANDERSON:
2	THE COURT: Okay. I'll allow you to use	2	Q Go ahead.
3	just the first sentence it says long-term studies it	3	A Yeah. The abdominal wall is a completely
4	doesn't appear to be too detailed, but it's	4	different setting. The mesh is placed at a different
5	appropriate.	5	place. And it is more easy to remove the mesh if you
6	MR. ANDERSON: Thank you.	6	have some failures.
7		7	Q Can you put up that slide, please?
8	(The sidebar ended.)	8	I want to go back, if I could no. The
9	= = =	9	one before, please.
10	BY MR. ANDERSON:	10	Do you remember when we were looking at the

- floor mesh repair is clearly not his area of specialty.
 He shouldn't even talk about -- what's on the left,
 that's what I covered with him, but on the right, he
 shouldn't because he's not qualified.
- MR. ANDERSON: He's been asked articleafter article about meshes in pelvic floor repair.
- 7 MR. GAGE: But not like that, Your Honor.
 8 Not going through that sort of stuff. And he's trying
 9 to convert over into a pelvic surgeon, which he's
 10 clearly not.
- **11** MR. ANDERSON: I absolutely disagree.

12 THE COURT: I think he's still talking13 about the quality of the material itself and how the14 material is used. Therefore, I'm going to allow it.

15 MR. ANDERSON: Thank you, Your Honor.

16 BY MR. ANDERSON:

- 17 Q So let's look at the first one. A flat
 18 mesh laying in the abdomen, like defense counsel
 19 pointed out earlier. Correct?
- **20** A Yes.
- 21 Q Whereas when you talk about a
- 22 three-dimensional mesh, do you mean going in and around
- 23 the pelvic organs, out through the woman's groin and
- 24 down through her buttocks?
- **25** A Yes.

1

2

3632

- Q And when you say without tension, you can lay that abdominal mesh flat like this. Correct?
- 3 A Yeah. It's flat. We don't even use any
- 4 fixation. It is just placed between the tissue, and
- 5 usually it stays there. There are no arms or something
- 6 putting on some mechanical strain.
- Q And you said this is laying in fatty tissueversus the female organs where there's a lot of nerves.
- **9** So instead of laying here, it's going all through here
- where there's lots of different nerve endings, nerve
- 11 channels and nerve branches. Correct?
- **12** A Yes. We are happy as an abdominal wall surgeon
- 13 that we can place the mesh in this layer of fat tissue
- 14 where there are little nerves and where the reaction is
- **15** quite smooth.
- 16 Q I think one of the big points you just
 17 raised a minute ago that I want to go to is, it's
 18 easier to remove this flat mesh in the abdomen and
 19 almost impossible to remove the mesh from a woman's
- **20** vagina and in and around her pelvic organs.
- Is that your understanding as a herniasurgeon, that it's easier to remove here?
- 23 MR. GAGE: Objection, qualifications. He's
- **24** deep into pelvic floor surgery.
- 25 THE COURT: Doctor, do you have the

- 1 experience or expertise to discuss whether it's
- **2** difficult to remove mesh from the pelvic area?
- **3** THE WITNESS: I know from all documents
- 4 where the specialists in the pelvic floor surgery said
- **5** that it is almost impossible to remove it. I know from
- 6 the abdominal wall that --
- 7 THE COURT: I'll allow you to give your
- 8 opinion based on your review of the materials.
- **9** MR. ANDERSON: Thank you. I was actually
- 10 just moving to the last bullet point.
- 11 BY MR. ANDERSON:
- 12 Q You talked about in hernia, with repairing13 an abdominal hernia mesh, if you have a hernia that's
- 44 lika thia waxaatwalke if tha whaa that waxawaat ta
- **14** like this, you actually, if the place that you want to
- **15** repair is here, you said you have to have 5 centimeters
- **16** extra around the edges of the area that you want to
- **17** repair; is that correct?
- **18** A That is correct. That is a principle.
- 19 Q And why do hernia surgeons have to do that
- 20 with polypropylene meshes?
- 21 A Because we know that there will be considerable
- 22 shrinkage, that this mesh will become smaller. And if
- 23 it's too small, then you will have a recurrence and
- 24 another hernia. And, therefore, we want to make this
- 25 wide overlap. And if you place it in the abdominal
 - Albania da manala anna an Rai da la la

- 1 wall, there is much space to do so.
- **2** Q The Gynemesh PS is precut. Correct?
- **3** A Yes.
- 4 Q Is there any way to allow for the shrinkage
- 5 if it's precut? If it's already cut in this fashion,
- **6** there's no way to allow for the shrinkage in order to
- 7 make sure it covers the organs, is there?
- **8** A I have no idea how this may work.
- **9** Q You said earlier that there are certain
- 10 types of hernia repair where you absolutely would not
- **11** use polypropylene mesh. Correct?
- **12** A Not absolutely, but very restrictive in our
- 13 limitations.
- 14 Q And one of those is around the esophagus
- **15** where you have a hiatal hernia. Correct?
- **16** A Yes, yes, yes. We know that when we place a
- 17 mesh, the recurrence rate is lower. We know this, but
- 18 there are some patients where it may come that the mesh
- 19 migrates into the esophagus and cut off -- yeah,
- **20** migrates into -- made an erosion into the esophagus.
- 21 And the reoperation is a big challenge, and --
- 22 sometimes with mortality, and, therefore, it is a
- 23 common agreement among abdominal surgeons not to use it
- 24 as a first choice, but only in patients where it -- we
- 25 don't know what to do else, then we use the mesh.

1	Q Can you put the last slide up, please?	1	A Yes.			
2	Have you seen this slide by the worldwide	2	Q This is your article, we showed it, jury			
3	medical affairs director, David Robinson at Ethicon,	3	3 saw it, 2004, it's got your name on it. Correct?
